At the dawn of the third millennium we are confronted with a disturbing phenomenon although global life expectancy still increases this is not the case for healthy life expectancy The explanation of this seemingly contradiction is mainly due to the rising prevalence of the new pandemic of chronic non communicable diseases NCDs Even in low and middle income countries the improvement in healthcare status and life expectancy is paralleled by the increase of NCDs as in all countries worldwide Since the United Nations General Assembly held in New York in 2011 many publications have emphasized the close link between NCDs and nutrition The NCDs epidemic forces us to reconsider the public health perspectives Many governments non governmental organizations and other institutions are actively involved in educational nutrition programs and campaigns however their efforts seldom obtain the results hoped for It is extremely difficult to induce changes in lifestyle and behavior that have built up over a long period of time However it becomes urgent to adapt to our changing life environment where traditional wisdom and intuitive choices are giving way to individual thinking and search for often uncontrolled information This engenders a number of unprecedented challenges and it calls for a re appraisal of the existing paradigms to achieve an adequate management of the upstream determinants of health instead of a pre dominant medical and hospital centric approach In the era of personalized healthcare it is time to empower policy makers professionals and citizens for achieving an evidence based change in the health disease interface and decision making process for public health interventions The scientific and professional society Health Technology Assessment International HTAi has recognized nutrition as a health technology preventative by creating a Interest Group IG dedicated to research on methodologies and assessments of nutrition related public health while taking into account contextual factors ethical legal social organizational economic in order to generate meaningful outcomes for establishing evidence based health policies This Research Topic aims to elaborate on some of the potential hurdles or guarantees which have to be overcome for the sake of sustainable healthcare provisions anywhere in the world such as shortcomings in methodological approaches regulatory frameworks gaps between evidence its hierarchy and final recommendations for public health management
