The increase in the prevalence of diet related diseases in the female population since the second half of the 20th century is likely the result of increasing life expectancy combined with increased exposure to environmental factors including lifestyle To date the exact mechanism for the development of many nutrition related diseases remains unknown Mainly because of the multifactorial etiology It is often forgotten that human biology and pathophysiology are regulated at the level of gene expression Genetics loads the gun but the environment pulls the trigger by Judith Stern illustrates the complex relationship between diseases and environmental factors The analogy accurately conveys that disease phenotypes are not only the result of interactions between different genes but also between genes and environmental determinants

**Genetic Aspects of Plant Nutrition** M.R. Saric, B.C. Loughman, 2012-12-06 The idea of addressing the problem of the genetic specificity of mineral nutrition at an international level arose four years ago in a proposal for this topic to be included in the program of the II Congress of the Federation of European Societies for Plant Physiology FESPP as a separate section The Organising Committee of the II Congress of FESPP which was held in Santiago de Compostella in 1980 arranged a special session and it was clearly successful A special scientific meeting where the genetic aspects of plant nutrition in their widest sense could be presented and discussed comprehensively appeared to be necessary and that is how this Symposium came to be organized by the Serbian Academy of Sciences and Arts Much progress has already been achieved in this field and bearing in mind the importance of this problem particularly at the present moment it is necessary for us both to acquaint ourselves with what has been achieved so far and even more to direct attention and effort to the fundamental problems for the future
