Nutritional Therapy Vol 2 The Complete Core Program:

Alpha Nutrition Program Stephen Gislason MD,2017-07-24 The Alpha Nutrition Program is a set of instructions and nutrient tools designed to resolve disease through diet revision The program is nutritional therapy a personal technology of health restoration and health maintenance The development of the Alpha Nutrition Program began many years ago with observation that some food selection patterns are associated with dysfunction and disease In one person for example the daily ingestion of multigrain bread milk cheese bran muffins beef coffee orange juice and wine is associated with chronic fatigue sleepiness after eating nose congestion flushing headaches generalized aching stiffness and episodes of unexplained depression When the food list is changed to rice vegetables chicken peaches and pears the symptoms disappear and the person reports increased energy and a renewed sense of well being Similar observations are reported in a large sample of people of all ages A variety of other dysfunctional patterns are found to improve with proper diet revision We reasoned that everyone probably has a small set of best fit foods that would allow them to feel and function optimally The first goal of therapy should then be to identify the simplest set of best foods for each person The core concept further developed as we kept score of adverse food reactions reported by patients and found that rice and common cooked vegetables were among the best tolerated and most acceptable of all food choices

Health literacy and disease prevention, volume II Sudip Bhattacharya, Ozden Gokdemir, Deep Shikha, Ferdinando Petrazzuoli, Poonam Kushwaha, 2024-03-06 This Research Topic is a follow on from the Topic Editors successful volume I The term health literacy was coined by Ratzan et al in the 1970s providing the minimal health education required in schools however this term is almost new and in the early phase of development Though many attempts have been made in the past to define health literacy WHO construed it as the cognitive and social skills which determine the motivation and ability of individuals to gain

access to understand and use information in ways which promote and maintain good health Health literacy not only focuses on the individual behavior oriented communication but also on the various determinants of health such as environmental social and political factors thus it is ahead in the concept of health education If health education methods go beyond the bounds of information diffusion and bring about interaction participation and critical analysis such kind of approach will lead to improved health literacy personal aid and social benefit by enabling adequate community action and contributions to the advancement of social capital
