Particle Physics From Underground To Heaven - Proceedings Of The Johns Hopkins Workshop On Current Problems In Particle Theory 15

Gabor Domokos, Susan Kovesi-domokos, 1992-03-04 This book addresses the theoretical aspects of the search for new physics beyond the Standard Model of elementary particle interactions Both accelerator based and non accelerator astro particle physics searches are discussed The contents of the Proceedings are unique in its emphasis on the interaction between these two aspects of particle physics

Non-perturbative Particle Theory And Experimental Tests: Proceedings Of The Johns Hopkins Workshop On Current P

Otto Nachtmann, Gabor Domokos, Susan Kovesi-domokos, Matthias Jamin, 1997-08-12 The twentieth Johns Hopkins Workshop on current problems in particle theory took place in Heidelberg The topic of the workshop was chosen in view of the phantastic success enjoyed by the standard model of electroweak and strong interactions Until today no significant deviations from the predictions of the standard model have been observed However precision tests have been dominantly performed in the high energy domain where the QCD coupling constant is small enough to allow for a perturbative treatment of the strong interaction It is therefore very important to consider also the low energy region for which non perturbative aspects of QCD come into play

Particles And The Universe - Proceedings Of The Johns Hopkins Workshop On Current Problems In Particle Theory 17

Zalan Horvath, A Patkos, Laszlo Palla, 1994-07-15 An accelerating convergence of interests of particle physics and modern experimental and theoretical astrophysics has been witnessed in the past few years One of the focal points is the observation and phenomenological characterization of Dark Matter from Galactic to the large scale structure of the Universe Particle physics provides detailed predictions for the cosmological impact of various dark matter candidates The other central subjects are neutrino astronomy and cosmic ray reactions which provide valuable information both on stellar structure solar neutrinos and on the nature of extreme high energy particle interactions The lectures presented here represent important new contributions to all these fields

Neutrinos In The New Millennium - Proceedings Of The Johns Hopkins Workshop On Current Problems In Particle Theory 23 Gabor Domokos, Susan Kovesi-domokos, 2000-07-12 The physics of neutrinos has acquired a rapidly increasing role within the realm of particle physics Recognized as an elusive particle since the prediction of its existence by Pauli and its incorporation into particle theory by Fermi in the early thirties the neutrino was first observed some twenty years later by Reines and Cowan Experiments carried out by Lederman Schwartz Steinberger et al first revealed the existence of several species of neutrinos By now neutrino physics has matured to the point where detailed properties of neutrinos and their mixing can be studied by a number of experiments carried out in various high energy laboratories Such experiments are relevant not only from viewpoint of understanding the properties of elementary particles but also the early history of the Universe This volume discusses the most recent experimental and theoretical results in that exciting area of particle physics

both its own centennial and this remarkable century the APS has prepared a book highlighting the seminal discoveries of the 20th century with invited articles by the world's most eminent living physicists including 12 physics Nobel Prize winners. Included will be chapters by R Richardson on superfluidity, J Lebowitz on statistical mechanics, P deGennes on granular material, J Hopfield on neural networks, C Wieman on matter waves, A Pais on high energy physics in the early 20th century. The book will contain about 40 chapters on a broad range of topics in physics written in an engaging and personal style. While the technical level is high, these are not review articles but rather perspectives on discoveries written by those scientists most closely associated with the original work as well as future directions of research. The book will be promoted to the meeting attendees in advance of the March meeting and should be of interest to the broad scientific community. Ben Bederson, professor of physics at NYU, was editor in chief of the APS journals from 1986-1997. He is also editor of the *Advances in Atomic Physics* Series, Academic Press, 1996. A world list of books in the English language, Kovesi-domokos, 1992.
