Preparation of Water Samples for Asbestos Fiber Counting by Electron Microscopy Eric J. Chatfield, Roger W. Glass, M. Jane Dillon, 1978 **Nuclear Science Abstracts**, 1957 *An Introduction to Surfactants* Tharwat F. Tadros, 2014-04-01 Surfactants are surface active agents molecules that have a significant role in emulsions suspensions and foams They find widespread application in personal care cosmetics pharmaceuticals agrochemicals and the food industry The main objective of this graduate level textbook is to present an overview of the classification physical properties phase behavior their effects and applications of surfactants e g as emulsifiers foam stabilizer in nano and microemulsions and as wetting agents **Dispersions** Erik Kissa, 2017-11-22 Explaining principles essential for the interpretation of data and understanding the real meaning of the result this work describes various methods and techniques used to characterize dispersions and measure their physical and chemical properties It describes a variety of dispersions containing particles ranging from submicron sizes to aggregates and from hard particles to polymer latices *Handbook of Industrial Chemistry and Biotechnology* James A. Kent, 2013-01-13 Substantially revising and updating the classic reference in the field this handbook offers a valuable overview and myriad details on current chemical processes products and practices No other source offers as much data on the chemistry engineering economics and infrastructure of the industry The Handbook serves a spectrum of individuals from those who are directly involved in the chemical industry to others in related industries and activities It provides not only the underlying science and technology for important industry sectors but also broad coverage of critical supporting topics Industrial processes and products can be much enhanced through observing the tenets and applying the methodologies found in chapters on Green Engineering and Chemistry specifically biomass conversion Practical Catalysis and Environmental Measurements as well as expanded treatment of Safety chemistry plant security and Emergency Preparedness Understanding these factors allows them to be part of the total process and helps achieve optimum results in for example process development review and modification Important topics in the energy field namely nuclear coal natural gas and petroleum are covered in individual chapters Other new chapters include energy conversion energy storage emerging nanoscience and technology Updated sections include more material on biomass conversion as well as three chapters covering biotechnology topics namely Industrial Biotechnology Industrial Enzymes and Industrial Production of

Therapeutic Proteins *Pharmaceutical Solid Dispersion Technology* Muhammad J. Habib, 2000-10-05 There has not until now been a single up to date volume to provide those in drug R D with practical information on all aspects of solid dispersion technology for drugs This forthcoming volume finally provides such a guide and reference The unified presentation by a team of specialists in this field is designed for practical application Theoretical concepts are covered for a fuller understanding of current techniques All significant recent developments are included **Hydrocarbon Resins** Rolf Mildenberg, Mechthild Zander, Gerd Collin, 2008-09-26 For the first time A comprehensive Overview on Resins Resins nowadays are still the subject of much interest with applications in many branches of industrial production Increasingly stringent specific market requirements and the demand for better quality control and product consistency mean that chemists engineers and application technicians are not merely satisfied with the knowledge of the physical data of the basic chemical products they are using The raw materials their production processes and special physical and chemical characteristics relevant to their applications are increasingly of interest This book points out the extent to which raw materials manufacturing processes and chemical composition of resins influence their application and performance *Water-Insoluble Drug Formulation* Ron Liu, 2008-01-18 Scientists have attributed more than 40 percent of the failures in new drug development to poor biopharmaceutical properties particularly water insolubility Issues surrounding water insolubility can postpone or completely derail important new drug development Even much needed reformulation of currently marketed products can be significantly affected by these challenges Water Insolubility is the Primary Culprit in over 40% of New Drug Development Failures The most comprehensive resource on the topic this second edition of Water Insoluble Drug Formulation brings together a distinguished team of experts to provide the scientific background and step by step guidance needed to deal with solubility issues in drug development Twenty three chapters systematically describe solubility properties and their impact on formulation from theory to industrial practice With detailed discussion on how these properties contribute to solubilization and dissolution the text also features six brand new chapters on water insoluble drugs exploring regulatory aspects pharmacokinetic behavior early phase formulation strategies lipid based systems for oral delivery modified release of insoluble drugs and scalable manufacturing aspects The book includes more than 15 water insoluble drug delivery systems or technologies illustrated with case studies featuring oral and parenteral applications Highlighting the most current information and data available this seminal volume reflects the significant progress that has been made in nearly all aspects of this field **Surfactants Applications Directory** D.R. Karsa, P.J. Donnelly, J.M. Goode, 2012-12-06 Existing surfactants directories tend to focus on product identification by tradename producer or chemical type enabling the user only to identify product equivalents and surfactant suppliers Application information where available is usually scant or given as a footnote This new directory approaches the identification of surfactants primarily from the applications standpoint Hence the formulator or end user can readily assess the products available for use in a particular industry sector and select materials

giving the required surface active properties For example a formulator of agrochemicals for crop protection can turn to the section which refers to surfactants for use in the agrochemical industry and then easily identify a wetter dispersant system for the production of water dispersible granules Information is presented in an alternative format in the second part of the directory which will help the user to identify swiftly products for a particular application by surface active properties It is difficult if not impossible to identify an industry which does not directly or indirectly utilise surfactants Therefore it has proved necessary to simplify industry classifications to encompass a variety of uses under broader sector titles The industry classifications adopted here have been used in many previous publications and papers and define as accurately as possible the major industries and applications serviced by the surfactant industry The editors have been particularly pleased with the support and response of the industry in the supply of data

Surfactants in Solution K.L. Mittal,D.O. Shah,2013-03-08 This volume chronicles the proceedings of the 8th International Symposium on Surfactants in Solution SIS held in Gainesville FL June 10 15 1990 This series of symposia have been smoothly running since 1976 but the appellation Surfactants in Solution was used for the first time in 1982 in Lund Since then our logo SIS has become very familiar to everyone involved in surfactants In Lund the meeting was billed as the Fourth International Symposium on Surfactants in Solution Earlier three events were held under different rubrics but proceedings of all these symposia except the 7th SIS held in Ottawa in 1988 have been properly documented As a matter of fact so far 10 volumes have appeared under the title Surfactants in Solution 1 2 3 The program for the 9th SIS was very comprehensive and many ramifications of surfactants were covered and it was a veritable international event It contained a total of 384 papers by 869 authors from practically every corner of our planet Just the sheer number of papers is a testimonial to the high tempo of research and tremendous interest in this wonderful class of materials As in the past there were plenary lectures 5 invited talks 37 oral presentations 195 and poster presentations 147 The plenary lectures were given by Prof J Th G Overbeek Prof C A Bunton Prof H Ti Tien and Dr J Swalen The lecture by Prof Overbeek the doyen of surface and colloid science was a real treat

Automotive Coatings Formulation Ulrich Poth,2008 The automobile industry and varnish manufacturers are expending considerable amounts of money to produce particularly appealing surfaces The main task of a lacquer is protection against corrosion weathering and chemical and mechanical influences as well as obtaining the appealing surface Different manufacturers specialize exclusively in automobile lacquers This book deals with the composition and the production of the different components and their physical characteristics as well as their application technology characteristics Therefore both the application behavior the task of protection and the corresponding appearance are covered in detail

Pressure-Sensitive Formulation Istvan Benedek,2020-06-07 Growing interest in the formulation of pressure sensitive adhesives as described in the first edition of this book Pressure Sensitive Formulation VSP 2000 required a new enlarged edition including the design of pressure

sensitive adhesives as a separate volume. Developments in the understanding of pressure sensitivity were necessary to use macromolecular chemistry for pressure sensitive design. Such developments include polymer physics and contact mechanics. Progress in coating technology, especially in in-line coating and synthesis, opened new ways for the design of pressure sensitive adhesives and products as well. Actually, pressure sensitive products with and without adhesives compete, requiring a broad variety of material formulations and the corresponding manufacturing technology. The first volume of the book examines the theoretical aspects of pressure sensitive design based on macromolecular chemistry, macromolecular physics, rheology, and contact mechanics. The second volume describes the practical aspects of pressure sensitive design and formulation related to product application. The advances in the various domains are described by specialists. *Research and Development Progress Report*. United States. Office of Saline Water, 1966. No. 47.
