Standards for Preparing Teachers of Mathematics Association of Mathematics Teacher Educators (AMTE), 2020-02-01 Also available in a black white version AMTE in the Standards for Preparing Teachers of Mathematics SPTM puts forward a national vision of initial preparation for all Pre K-12 teachers who teach mathematics. SPTM contains critical messages for all who teach mathematics including elementary school teachers teaching all disciplines, middle and high school mathematics teachers who may teach mathematics exclusively, special education teachers, teachers of emergent multilingual students and other teaching professionals and administrators who have responsibility for students' mathematical learning. SPTM has broad implications for teacher preparation programs in which stakeholders include faculty and administrators in both education and mathematics at the university level, teachers principals and district leaders in the schools with which preparation programs partner and the communities in which preparation programs and their school partners are situated. SPTM is intended as a national guide that articulates a vision for mathematics teacher preparation and supports the continuous improvement of teacher preparation programs. Such continuous improvement includes changes to preparation program courses and structures, partnerships involving schools and universities and their leaders, the ongoing accreditation of such programs regionally and nationally and the shaping of state and national mathematics teacher preparation policy. SPTM is also designed to inform assessment practices for mathematics teacher preparation programs to influence policies related to preparation of teachers of mathematics and to promote national dialogue around preparing

teachers of mathematics The vision articulated in SPTM is aspirational in that it describes a set of high expectations for developing a well prepared beginning teacher of mathematics who can support meaningful student learning The vision is research based and establishes a set of goals for the continued development and refinement of a mathematics teacher preparation program and a research agenda for the study of the effects of such a program SPTM contains detailed depictions of what a well prepared beginning teacher knows and is able to do related to content pedagogy and disposition and what a strong preparation program entails with respect to learning experiences assessments and partnerships Stakeholders in mathematics teacher preparation will find messages related to their roles Standards for Preparing Teachers of Mathematics includes standards and indicators for teacher candidates and for the design of teacher preparation programs SPTM outlines assessment practices related to overall quality program effectiveness and candidate performance SPTM describes specific focal practices by grade band and provides guidance to stakeholders regarding processes for productive change [How Students Think When Doing Algebra](#) Steve Rhine,Rachel Harrington,Colin Starr,2018-11-01 Algebra is the gateway to college and careers yet it functions as the eye of the needle because of low pass rates for the middle school high school course and students struggles to understand We have forty years of research that discusses the ways students think and their cognitive challenges as they engage with algebra This book is a response to the National Council of Teachers of Mathematics NCTM call to better link research and practice by capturing what we have learned about students algebraic thinking in a way that is usable by teachers as they prepare lessons or reflect on their experiences in the classroom Through a Fund for the Improvement of Post Secondary Education FIPSE grant 17 teachers and mathematics educators read through the past 40 years of research on students algebraic thinking to capture what might be useful information for teachers to know over 1000 articles altogether The resulting five domains addressed in the book Variables Peterson Leatham 2009 The purpose of this book is to accelerate early career teachers experience with how students think when doing algebra in middle or high school as well as to supplement veteran teachers knowledge of content and students The research that this book is based upon can provide teachers with insight into the nature of a student s struggles with particular algebraic ideas to help teachers identify patterns that imply underlying thinking Our book How Students Think When Doing Algebra is not intended to be a how to book for teachers Instead it is intended to orient new teachers to the ways students think and be a book that teachers at all points in their career continually pull of the shelf when they wonder how might my students struggle with this algebraic concept I am about to teach The primary audience for this book is early career mathematics teachers who don t have extensive experience working with students engaged in mathematics However the book can also be useful to veteran teachers to supplement their knowledge and is an ideal resource for mathematics educators who are preparing preservice teachers [**Catalog of Copyright Entries.
