is crucial to conduct an analysis of the relationships between the examined three presidents and their advisers in order to demonstrate if the subordinates excelled in leadership because of the presidents leadership skill *Living U.S.-China Relations* David M. Lampton, 2024-01-05 This book addresses head on a core current critique of how the Sino American relationship was managed across eight administrations The essence of this critique is that naive U S elites confused their hopes for democracy and a globally responsible China with the actual prospects for those desirable ends and in the process unwisely traded away American interests competitive position and national security In short the U S bolstered the principal strategic threat that it now faces This book is a fact based challenge to that simplistic narrative Today developments in the U S China relationship are converging in a fashion that is setting off fire alarm bells At this moment in 2023 the underbrush is plentiful the winds unfavorable and the atmosphere parched The fire hazard between America and China is increasing unlike anything we have seen in a half century This volume describes our current condition and explains the last half century that has brought us to this perilous day The defining and unique characteristic of *Living U S China Relations* is that it tells the story of U S China ties as the relationship between two societies not just two states and it does so through the author s lived experience over nearly sixty years *Deaf Life* , 1995 **Geographic Mental Maps and Foreign Policy Change** Luis da Vinha, 2017-05-08 In recent years geographic mental maps have made a comeback into the spotlight of scholarly inquiry in the area of International Relations IR particularly Foreign Policy Analysis FPA The book is framed within the mental map research agenda It seeks to contribute and expand the theoretical and empirical development and application of geographic mental maps as an analytical concept for international politics More precisely it presents a theoretical framework for understanding how mental maps are employed in foreign policy decision making and highlights the mechanisms involved in their transformation The theoretical framework presented in this book employs the latest conceptual and theoretical insight from numerous other scientific fields such as social psychology and organizational theory In order to test the theoretical propositions outlined in the initial chapters the book assesses how the Carter Administration s changing mental maps impacted its Middle East policy In other words the book applies geographic mental maps as an analytical tool to explain the development of the Carter Doctrine The book is particularly targeted at academics students and professionals involved in the fields of Human Geography IR Political Geography and FPA The book will also be of interest to individuals interested in Political Science more generally While the book has is academic in nature its qualitative and holistic approach is accessible to all readers interested in geography and international politics Luis da Vinha PhD is Assistant Professor of Geography Political Science at Valley City State University
