Preventing Transmission of HIV: A Biological and Medical Perspective*

MYRON S. COHEN, M.D.

IN MY COMMENTS I will summarize our understanding of the transmission of HIV, and describe how this knowledge has been used to develop prevention strategies—many of which have already been used successfully.

The probability of transmission of HIV depends on the route. HIV-contaminated blood used for a transfusion is still a problem in some resource poor countries, and causes infection more than 90% of the time. In contrast, someone stuck with a contaminated needle has only a 1/300 chance of acquiring HIV. The chance of HIV transmission during childbirth is about 30%. The chances of acquiring HIV from sexual exposure is highly variable, but is often very inefficient, so that dozens or even hundreds of episodes of intercourse appear to be required for transmission to occur. This ought to be surprising since HIV is first and foremost an STD! More than 70% of HIV is sexually transmitted.

Given the relative inefficiency of the sexual transmission of HIV, how can we explain the magnitude of the HIV epidemic? Other factors must define the epidemic. These include the duration of time a person remains contagious, and the number of people exposed. Indeed, we can multiply these factors together to predict the spread of HIV. Thus, the ferocity of the AIDS epidemic is not because the virus is so

easily transmitted. Rather, it is because of the many years that infected people remain sexually active, and because of the large number of different sexual encounters that might occur, particularly where commercial sex work is common.

Now let's look more closely at sexual transmission of HIV by both the infectiousness of the HIV carrier, and the susceptibility of the person exposed.

Infectiousness of HIV is determined by the amount of virus in the blood or genital secretions, and special features of the viral swarm which can render the virus either more or less contagious. Higher concentrations of HIV in blood and genital secretions greatly increase the chance for HIV transmission. Many experts believe that the type of virus found in Sub-Saharan Africa, which is different than the virus found in the United States, is more contagious. The HIV virus in China, as you will hear from Dr. Shao Yiming, is unfortunately caused by a virus similar to that found in Sub-Saharan Africa.

Not everyone is equally susceptible to HIV. Indeed, here are three kinds of resistance to HIV: hereditary, innate, and acquired. Hereditary resistance is observed in about 1/100 Caucasians who have cells that cannot be readily infected with the virus because of a genetic

Preventing Aids A Programmatic Perspective:

Preventing Aids Seth C. Kalichman, 2014-02-25 This book provides a comprehensive overview of behavioral interventions to prevent HIV AIDS risk related behaviors It synthesizes the empirical literature on individual group and community level interventions and provides an objective and detailed assessment of intervention outcomes Factors associated with behavioral risk for HIV transmission theories of HIV risk behavior change and the state of HIV prevention technology transfer are also reviewed Additionally behavioral interventions for adolescents and adults of diverse ethnic and sexual backgrounds are discussed with respect to each intervention type Although the focus is on sexual risk reduction interventions for sexual behavior of substance abusing populations are also covered *Practice Guidelines for Harmonizing HIV Prevention Initiatives in the Infrastructure Sector* Asian Development Bank, 2010-10-01 Development partners have recognized the obligation to mitigate HIV risks associated with infrastructure development as an opportunity to contribute to the fight against HIV AIDS and poverty in the Greater Mekong Subregion Development partners agreed to strengthen inter agency cooperation and harmonization to scale up and enhance the effectiveness of HIV and AIDS prevention in future infrastructure interventions To achieve this they jointly developed a set of practice guidelines that can provide some standardization of effective program elements focusing on three different but interacting populations sex and entertainment workers local communities impacted by infrastructure development and migrant workers **Dawning Answers** Ronald O. Valdiserri, 2003 Dawning Answers looks at the global HIV AIDS epidemic through the lens of its evolving influence on public health theory and practice Losses from the epidemic have been devastating but the many lesson learned have positively influenced other domains of public health and will continue to generate new approaches to health assessment policy development and assurance Students and teachers of public health and preventive medicine will find in this singular volume useful analyses from the various disciplines comprising public health **AIDS Bibliography**, 1990 **Preventing AIDS** Ralph J. DiClemente, John L. Peterson, 2013-06-29 Public health has a legacy of neglect regarding social and behavioral research Too often prompted by technical and scientific progress we have ignored even marginalized the vital human element in health thinking and practice Thus for example while family planning programs focused on providing a choice among safe and effective contraceptive methods a supremely worthy goal the central issue of sexuality and sexual behavior was generally neglected Similarly the enormous and important efforts to develop rapid and reliable diagnostic and treatment methods for sexually transmitted diseases helped divert attention away from the crucial issues of sexual practice In short we seem to have difficulty addressing the fundamental behaviors including sex drug taking and other intoxications and violence that are central to the major causes of preventable morbidity disability and premature mortality in the world today Our collective reluctance to examine and understand ourselves is also expressed in the oft repeated pipedream that scientific progress will take care of the HIV AIDS pandemic by delivering a preventive vaccine an effective cure or both Yet even a cursory glance at

the relationship between scientific technical progress and health shows that meeting the scientific challenges is only one step toward effective application of the vaccine or drug It is typical not atypical that hepatitis B vaccine is only now becoming relatively freely available to large populations in the developing world more than a decade after the vaccine's licensure

Prevention Pipeline, 1987 An alcohol and drug awareness service **Progress in Preventing AIDS?** David Ross Buchanan, George Peter Cernada, 2019-03-19 Originally published in the International Quarterly of Community Health Education this work presents twenty one chapters about the state of HIV AIDS prevention programs in a global context

against HIV *International Perspectives on Women and HIV* Samuel A MacMaster, Brian E Bride, CINDY DAVIS, 2013-09-13
Throughout the world the threat of HIV AIDS to women's health has become the focus of increased concern The Joint United Nations Programme on HIV AIDS 2004 reports that almost 20 million women and girls are living with HIV globally accounting for nearly half of all people living with HIV worldwide Infection rates among women are rising in every region worldwide including high income countries in which heterosexual intercourse may now be the most common mode of transmission Although there are many contributing factors to the current trends in HIV most women who become HIV infected do not practice high risk behaviour Women worldwide may individually view themselves as less susceptible than men and may pay less attention about how HIV is transmitted and how to prevent infection There are also gender inequalities stemming from sexual double standards that constrain women's access to care treatment and support This work focuses on international perspectives on women and HIV casting a deliberately wide net addressing the issue of the interaction between HIV and gender in a specific geographic area Our intention is to provide a forum for innovative manuscripts whose contribution to the literature is found in their unique approach to this interaction and application of empirical investigation to unique problems and or populations This material was published in the Journal of Human Behavior in the Social Environment

The New Public Health and STD/HIV Prevention Sevgi O. Aral, Kevin A. Fenton, Judith A. Lipshutz, 2012-12-09 Despite effective approaches to prevention STD and HIV infection rates remain fairly constant Targeting implementation and monitoring of interventions have posed widespread problems and the recent spate of cuts to prevention budgets has made these roadblocks even more challenging It is clear that working in sexual health requires both a deeper understanding of STI HIV epidemiology and an ongoing quest for up to date realistic prevention strategies The New Public Health and STD HIV Prevention offers readers leading edge access to both Focusing on social determinants of sexual health at risk populations critical factors in approaches to prevention and reviews of new research this authoritative volume explores areas as varied as HPV prevention technology based interventions migration as a factor in disease transmission and competencies key to effective leadership in the field Dispatches from the frontlines of theory research and practice in the U S and abroad include Personal risk public impact balancing individual rights and STD HIV prevention Distribution of prevention resources and its impact on sexual health Prevention measures in diverse populations of women Toward a better approach to preventive interventions with men who have sex with men Adolescent sexual health and STIs Reducing disparities in sexual health lessons from the campaign to eliminate infectious syphilis Public health professionals of all backgrounds interested in or working in improving sexual health will find The New Public Health and STD HIV Prevention an indispensable guide to conceptualizing the problems and clarifying possible solutions *AIDS Between Science and Politics* Peter Piot, 2015-05-05
Peter Piot founding executive director of the Joint United Nations Programme on HIV AIDS UNAIDS recounts his experience

as a clinician scientist and activist fighting the disease from its earliest manifestation to today The AIDS pandemic was not only catastrophic to the health of millions worldwide but also fractured international relations global access to new technologies and public health policies in nations across the globe As he struggled to get ahead of the disease Piot found science does little good when it operates independently of politics and economics and politics is worthless if it rejects scientific evidence and respect for human rights Piot describes how the epidemic altered global attitudes toward sexuality the character of the doctor patient relationship the influence of civil society in international relations and traditional partisan divides AIDS thrust health into national and international politics where he argues it rightly belongs The global reaction to AIDS over the past decade is the positive result of this partnership showing what can be achieved when science politics and policy converge on the ground Yet it remains a fragile achievement and Piot warns against complacency and the consequences of reduced investments He refuses to accept a world in which high levels of HIV infection are the norm Instead he explains how to continue to reduce the incidence of the disease to minute levels through both prevention and treatment until a vaccine is discovered
