Abstract Objective To examine the effect of exercise based cardiac rehabilitation program for secondary prevention of coronary heart disease on cardiac related mortality recurrent cardiovascular event and quality of life

Methods All studies published between 1990 and 2013 in PubMed and from 1980 to 2013 in EMBASE which evaluated the effectiveness of exercise based cardiac rehabilitation program for coronary heart disease

Using the specific keywords Cardiac rehabilitation Coronary heart disease OR Ischemic heart disease MeSH Exercise OR Physical activities AND Quality of life OR Mortality AND Cardiovascular events were searched

A total of 7 randomized controlled trials out of 5 051 articles from PubMed and 117 articles from EMBASE were included in this systematic review

The primary outcome measures used in the included seven studies were HRQOL restenosis cardiac event cardiac related mortality

Similar demographic and clinical characteristics of the subjects between the intervention and the control groups were recorded

The studies were from five countries The average age of the subjects in the seven studies was 61 years the average half of them have history of myocardial infarction

Though there were discrepancies among the results generated in the included studies the potential benefits of exercise based cardiac rehabilitation could be seen

Results Compared with the non exercise based cardiac rehabilitation patients allocated to the exercise based cardiac rehabilitation program had greater improvement in HRQOL and reduction of cardiac events

The result of reducing restenosis was inconsistent

The cardiac related mortality is not significant difference between exercise based and non exercise based cardiac rehabilitation

Cardiac Rehabilitation Manual Josef Niebauer, 2017-02-13

This book fulfills the need for practical guidance among all professionals involved in the management of these patients from residents and fellows of cardiology and internal medicine surgical teams physiotherapy professionals critical care physicians and family medicine practitioners

The thoroughly updated content takes

into account recent developments in cardiac rehabilitation and incorporates practical advice on how to use guidelines in clinical practice There will be one new chapter on patients with cardiac resynchronization therapy and all the others will be updated to keep up to date with the guidelines and current practice Cardiac rehabilitation is of key importance to ameliorate long term morbidity and mortality resulting from cardiac diseases and events However much of the current literature is dense unwelcoming and academic in style and format For those physicians understanding the scope of cardiac rehabilitation there is a need to distill the guidelines and various management options available to them into a concise practical manual Up until now all references have looked at the general options but there is definite need to investigate the practicalities of individual patient groups

Guidelines for Cardiac Rehabilitation and Secondary Prevention Programs American Association of Cardiovascular & Pulmonary Rehabilitation, 2004 This edition addresses the cost effectiveness of interventions that educate and motivate patients to assume personal responsibility for long term disease prevention
