Baker, 2019-05-06 A new and urgently needed guide to making the American economy more competitive at a time when tech giants have amassed vast market power The U S economy is growing less competitive Large businesses increasingly profit by taking advantage of their customers and suppliers These firms can also use sophisticated pricing algorithms and customer data to secure substantial and persistent advantages over smaller players In our new Gilded Age the likes of Google and Amazon fill the roles of Standard Oil and U S Steel Jonathan Baker shows how business practices harming competition manage to go unchecked The law has fallen behind technology but that is not the only problem Inspired by Robert Bork Richard Posner and the Chicago school the Supreme Court has since the Reagan years steadily eroded the protections of antitrust The Antitrust Paradigm demonstrates that Chicago style reforms intended to unleash competitive enterprise have instead inflated market power harming the welfare of workers and consumers squelching innovation and reducing overall economic growth Baker identifies the errors in economic arguments for staying the course and advocates for a middle path between laissez faire and forced deconcentration the revival of pro competitive economic regulation of which antitrust has long been the backbone Drawing on the latest in empirical and theoretical economics to defend the benefits of antitrust Baker shows how enforcement and jurisprudence can be updated for the high tech economy His prescription is straightforward The sooner courts and the antitrust enforcement agencies stop listening to the Chicago school and start paying attention to modern economics the sooner Americans will reap the benefits of competition The Imperial Dictionary, English, Technological, and Scientific John Ogilvie, 1856 American Megafaunal Extinctions at the End of the Pleistocene Gary Haynes, 2008-12-23 The volume contains summaries of facts theories and unsolved problems pertaining to the unexplained extinction of dozens of genera of mostly large terrestrial mammals which occurred ca 13 000 calendar years ago in North America and about 1 000 years later in South America Another equally mysterious wave of extinctions affected large Caribbean islands around 5 000 years ago The coupling of these extinctions with the earliest appearance of human beings has led to the suggestion that foraging humans are to blame although major climatic shifts were also taking place in the Americas during some of the extinctions The last published volume with similar but not identical themes Extinctions in Near Time appeared in 1999 since then a great deal of innovative exciting new research has been done but has not yet been compiled and summarized Different chapters in this volume provide in depth resum s of the chronology of the extinctions in North and South America the possible insights into animal ecology provided by studies of stable isotopes and anatomical physiological characteristics such as growth increments in mammoth and mastodont tusks the clues from taphonomic research about large mammal biology the applications of dating methods to the extinctions debate and archeological

Cougar Maurice Hornocker, Sharon Negri, 2009-12-15 The cougar is one of the most beautiful enigmatic and majestic animals in the Americas Eliciting reverence for its grace and independent nature it also triggers fear when it comes into contact with people pets and livestock or competes for hunters game Mystery myth and misunderstanding surround this remarkable creature The cougar's range once extended from northern Canada to the tip of South America and from the Pacific to the Atlantic making it the most widespread animal in the western hemisphere But overhunting and loss of habitat vastly reduced cougar numbers by the early twentieth century across much of its historical range and today the cougar faces numerous threats as burgeoning human development encroaches on its remaining habitat When Maurice Hornocker began the first long term study of cougars in the Idaho wilderness in 1964 little was known about this large cat Its secretive nature and rarity in the landscape made it difficult to study But his groundbreaking research yielded major insights and was the prelude to further research on this controversial species The capstone to Hornocker's long career studying big cats Cougar is a powerful and practical resource for scientists conservationists and anyone with an interest in large carnivores He and conservationist Sharon Negri bring together the diverse perspectives of twenty two distinguished scientists to provide the fullest account of the cougar's ecology behavior and genetics its role as a top predator and its conservation needs This compilation of recent findings stunning photographs and firsthand accounts of field research unravels the mysteries of this magnificent animal and emphasizes its importance in healthy ecosystem processes and in our lives
