Sanz,Eric B. Hinkle,Anil K. Jain,2013-03-07 This book deals with novel machine vision architecture ideas that make real time projection based algorithms a reality The design is founded on raster mode processing which is exploited in a powerful and flexible pipeline We concern ourselves with several image analysis algorithms for computing projections of gray level images along linear patterns i e the Radon transform and other curved contours convex hull approximations the Hough transform for line and curve detection diameters moments and principal components etc Addition ally we deal with an extensive list of key image processing tasks which involve generating discrete approximations of the inverse Radon transform operator computer tomography reconstructions two dimensional convolutions rotations and translations multi color digital masks the discrete

Fourier transform in polar coordinates autocorrelations etc Both the image analysis and image processing algorithms are supported by a similar architecture We will also of some of the above algorithms to the solution of demonstrate the applicability various industrial visual inspection problems The algorithms and architectural ideas surveyed here unleash the power of the Radon and other non linear transformations for machine vision applications We provide fast methods to transform images into projection space representa tions and to backtrace projection space information into the image domain The novelty of this approach is that the above algorithms are suitable for implementa tion in a pipeline architecture Specificatiy random access memory and other dedicated hardware components which are necessary for implementation of clas sical techniques are not needed for our algorithms   Computer Science and Engineering Zainalabedin Navabi,David R.
