## **Reduplication Doubling In Morphology:**

**Reduplication** Sharon Inkelas, 2005 This groundbreaking new study takes a novel approach to reduplication a phenomenon whereby languages use repetition to create new words Sharon Inkelas and Cheryl Zoll argue that the driving force in reduplication is identity at the morphosyntactic not the phonological level and present a new model of reduplication Morphological Doubling Theory that derives the full range of reduplication patterns This approach shifts the focus away from the relatively small number of cases of phonological overapplication and underapplication which have played a major role in earlier studies to the larger class of cases where base and reduplicant diverge phonologically The authors conclude by arguing for a theoretical shift in phonology which entails more attention to word structure As well as presenting the authors pioneering work this book also provides a much needed overview of reduplication the study of which has become one of the most contentious in modern phonological theory

patterns of noun incorporation compounding reduplication and mimetic verbs

Berman, 2016-08-25 The volume addresses developing knowledge and use of Hebrew from the dual perspective of typologically specific factors and of shared cross linguistic trends aimed at providing an overview of acquisition in a single language from infancy to adolescence while also shedding light on key issues in the field as a whole Essentially non partisan in approach the collection includes distinct approaches to language and language acquisition formal universalist pragmatic usage based cognitive constructivist and deals with a range of topics not often addressed within a single volume phonological perception and production inflectional and derivational morphology simple clause structure and complex syntax early and later literacy writing systems with data deriving from varied research methodologies interactive conversations and extended discourse adult input and child output longitudinal and cross sectional corpora structured elicitations Each chapter provides background information on Hebrew specific facets of the topic of concern but typically

avoids ethno centrality by relating to more general issues in the domain The book should thus prove interesting and instructive for linguists psychologists and educators and for members of the child language research community both within and beyond the confines of Hebrew language expertise      *Verbal Plurality and Distributivity* Patricia Cabredo Hofherr, Brenda Laca, 2012-10-01 This volume brings together novel analyses of verbal plurality and distributivity The contributions draw on a wide range of new empirical data from languages as diverse as Arabic Cusco Quechua European Portuguese Hausa Karitiana Modern Hebrew and Russian The introductory chapter gives an overview of the central issues that underlie much recent research on the semantics of event plurality The papers on verbal plurality explore the interaction between verbal plurality and plural arguments in Arabic and European Portuguese the semantics of additive particles in Modern Hebrew the semantics of a range of pluractional markers in Cusco Quechua and the morphological variability of pluractional markers cross linguistically The papers on distributivity examine the syntax and semantics of reduplicated numerals in Karitiana and adnominal distributive markers This volume will be of interest to researchers and students in syntax formal semantics and language typology      *Identity Relations in Grammar* Kuniya Nasukawa, Henk Riemsdijk, 2014-07-28 Few concepts are as ubiquitous in the physical world of humans as that of identity Laws of nature crucially involve relations of identity and non identity the act of identifying is central to most cognitive processes and the structure of human language is determined in many different ways by considerations of identity and its opposite The purpose of this book is to bring together research from a broad scale of domains of grammar that have a bearing on the role that identity plays in the structure of grammatical representations and principles Beyond a great many analytical puzzles the creation and avoidance of identity in grammar raise a lot of fundamental and hard questions These include Why is identity sometimes tolerated or even necessary while in other contexts it must be avoided What are the properties of complex elements that contribute to configurations of identity XX What structural notions of closeness or distance determine whether an offending XX relation exists or inversely whether two more or less distant elements satisfy some requirement of identity Is it possible to generalize over the specific principles that govern non identity in the various components of grammar or are such comparisons merely metaphorical Indeed can we define the notion of identity in a formal way that will allow us to decide which of the manifold phenomena that we can think of are genuine instances of some identity avoidance effect If identity avoidance is a manifestation in grammar of some much more encompassing principle some law of nature then how is it possible that what does and what does not count as identical in the grammars of different languages seems to be subject to considerable variation      **ILSIENNA - Our Language- Vol. 1, 2009** ,      *Expressivity in European Languages* Jeffrey P. Williams, 2023-09-07 Providing extensive data on a range of European languages this book highlights the key role expressivity plays in all language      **Building Categories in Interaction** Caterina Mauri, Ilaria Fiorentini, Eugenio Goria, 2021-12-15 This book addresses the topic of linguistic categorization from a novel perspective While most of the early

**Exact Repetition in Grammar and Discourse** Rita Finkbeiner,Ulrike Freywald,2018-09-24 Most scholars define reduplication as a formally restricted grammatical process neatly distinguishing it from mere repetition as a discursal option However there is a fuzzy grey area between the two processes that has rarely been explored so far In this timely collection the phenomenon of exact repetition understood broadly as the systematic iteration of one and the same linguistic item within relatively close syntactic proximity is investigated from a number of angles The volume contains studies from phonology morphology syntax semantics and pragmatics and deals with a broad range of languages including alleged reduplication avoiders In bringing together different theoretical perspectives phenomenological domains and methodologies and in linking the fields of syntax and discourse to those of morphology and morphophonology the volume provides new insights into the structure and meaning of exact repetition phenomena and more

generally into their status within a theory of language The collection will appeal to formally and functionally oriented scholars from all subfields of linguistics including typology

**The Construction of Words** Geert Booij, 2018-04-13 This volume focuses on detailed studies of various aspects of Construction Morphology and combines theoretical analysis and descriptive detail It deals with data from several domains of linguistics and contributes to an integration of findings from various subdisciplines of linguistics into a common model of the architecture of language It presents applications and extensions of the model of Construction Morphology to a wide range of languages Construction Morphology is one of the theoretical paradigms in present day morphology It makes use of concepts of Construction Grammar for the analysis of word formation and inflection Complex words are seen as constructions that is pairs of form and meaning Morphological patterns are accounted for by construction schemas These are the recipes for coining new words and word forms and they motivate the properties of existing complex words Both schemas and individual words are stored and hence there is no strict separation of lexicon and grammar In addition to abstract schemas there are subschemas for subclasses of complex words with specific properties This architecture of the grammar is in harmony with findings from other empirical domains of linguistics such as language acquisition word processing and language change

**Morphological Length and Prosodically Defective Morphemes** Eva Zimmermann, 2017 This work examines specific sound changes that cannot be explained by phonological means alone but crucially rely on morphological information It offers a unified theoretical account of these phenomena as well as a rich database of attested patterns in the world's languages
