**Science and Empire** Paul F. Cranefield,2002-08-22 East Coast fever is a lethal disease of cattle caused by a parasite  
that multiplies within T lymphocytes causing them to become lymphoblasts that behave like cells in leukaemia and lymphoma  
This is the story of the disease and its effects on farmers as well as of the scientists who studied it The disease was unknown  
to western science or to veterinary practice until it was introduced into Rhodesia in 1901 It devastated the cattle raising and  
ox cart dependent transport systems of Rhodesia and South Africa and was not fully brought under control for some 50 years  
The book describes the social and economic impact of the outbreak the scientific investigations into it and the effort to  
control it The scientific study of the disease was done in part by the famous bacteriologist Robert Koch whose many early  
errors had a negative effect on later investigators whose work was far more sound      **Report of Proceedings ...** ,1929
