VALIDATION VS VERIFICATION IN SOFTWARE TESTING

VERIFICATION - A Software System at any Point of Time is Assessed Against Its Requirement.

VALIDATION - Testing a Software After Its Development Process

VERIFICATION

↓

- Performed by humans

- Reviewed by the internal team

- Cost of error will be less

- Done through inspections reviews etc

- Even though it's a low-level exercise it can catch a lot of errors

- Targets software architecture, database design, Design etc.

- Done to check whether software has met its specifications

VALIDATION

↓

- Targets the actual product

- Computer based execution

- Test document will be shared with external teams

- Same but it's a high level complex exercise

- Will help in concluding software's ability to meet customer expectation

- Costs more than that of errors found in verification

- Done through white box testing, gray box testing, black box testing etc.
