

Brief Guide to APA Format for Citations, Quotes, and References

David Fendrich
last revised on 9/08

These guidelines were taken from the *Publication Manual of the American Psychological Association (Fifth Edition)*. Examples are shown in **boldface**. This is not a complete guide to APA style, see the manual for more details. A more extensive on-line APA guide is available at <http://www.uwsp.edu/psych/apa4b.htm>. If you find mistakes in this guide please send corrections to dwfendrich@widener.edu

Citations

(always included author(s) last name(s), year, and page numbers)

Citations should be used whenever any information you read in a source is included in your paper. Citations must be used even though the information was written in your own words; you must give an author credit for an idea or finding. General knowledge (e.g., that George Washington was the first president of the United States) does not require a citation. When in doubt about whether information is general knowledge, use a citation.

Rogers (1994) measured simple reaction times.

Simple reaction times are about 150 ms., on average (Rogers, 1994).

- Old works where original date is known but source used is more recent (in the reference list give the reference to the source you used)

James (1890/1983)

- Very old works without an original date that have been translated

(Aristotle, trans. 1931)

- Citation of a source's citation – If you want to cite some information that was cited in a source you read but you don't have access to the cited source do the following. Avoid this practice, if possible.

Jones (1985) found a high incidence of drug use among high school students (cited in Smith, 1994).

In the above example, Jones made the finding that you read in a book by Smith and you don't have access to the original source by Jones.
