**Rule-Governed Behavior** Steven C. Hayes, 2012-12-06 Animal learning and human learning traditions have been distinguishable within psychology since the start of the discipline and are to this day The human learning wing was interested in the development of psychological functions in human organisms and proceeded directly to their examination The animal learning wing was not distinguished by a corresponding interest in animal behavior per se Rather the animal learners studied animal behavior in order to identify principles of behavior of relevance to humans as well as other organisms The two traditions in other words did not differ so much on goals as on strategies It is not by accident that so many techniques of modern applied psychology have emerged from the animal laboratory That was one of the ultimate purposes of this work from the very beginning The envisioned extension to humans was not just technological however Many animal researchers B F Skinner most prominently among them recognized that direct basic research with humans might ultimately be needed in certain areas but that it was wise first to build a strong foundation in the controlled environment of the animal laboratory In a sense animal learning was always in part a human research program in development

**B.F. Skinner - A Reappraisal** Marc N. Richelle, 2016-07-15 B F Skinner died in August 1990 He was praised as one of the most influential psychologists of this century but was also attacked by a variety of opponents within and outside the field of psychology Originally published in 1993 this introduction to his work is first of all a guide to a correct

reading of his writings a reading void of the distortions and misinterpretations often conveyed by many commentators including psychologists It frames Skinner s contributions with reference to major European traditions in psychological sciences namely Pavlov Freud Lorenz and Piaget Crucial aspects of Skinner s theory and methodological stands are discussed in the context of contemporary debates special attention is devoted to the relation of psychology with biology and the neurosciences to the cognitivist movement to the status of language and to the explanation of novelty and creativity in human behaviour Finally Skinner s social and political philosophy is presented with an emphasis on the provocative aspects of an analysis of current social practices which fail to solve most of the urgent problems humankind is confronted with today Both in science proper and in human affairs at large Skinner s thought is shown to be not behind as is often claimed but on the contrary ahead of the times be it in his interactive view of linguistic communication in his very modern use of the evolutionary analogy to explain the dynamics of behaviour or in his vision of ecological constraints Written by a European psychologist the book departs from traditional presentations of Skinner s work in the frame of American psychology It will provide the reader who is unfamiliar with the great behaviourist s writings a concise yet in depth introduction to his work
