Shock Wave Reflection Phenomena Gabi Ben-Dor,2013-06-29 The phenomenon of shock wave reflection was first reported by the distinguished philosopher Ernst Mach in 1878 Its study was then abandoned for a period of about 60 years until its investigation was initiated in the early 1940s by Professor John von Neumann and Professor Bleakney Under their supervision 15 years of intensive research related

to various aspects of the reflection of shock waves in pseudo steady flows were carried out. It was during this period that the four basic shock wave reflection configurations were discovered. Then for a period of about 10 years from the mid 1950s until the mid 1960s investigation of the reflection phenomenon of shock waves was kept on a low flame all over the world e.g. Australia, Japan, Canada, U.S.A., U.S.S.R. etc. until Professor Bazhenova from the U.S.S.R., Professor Irvine Glass from Canada and Professor Roy Henderson from Australia re-initiated the study of this and related phenomena. Under their scientific supervision and leadership numerous findings related to this phenomenon were reported. Probably the most productive research group in the mid 1970s was that led by Professor Irvine Glass in the Institute of Aerospace Studies of the University of Toronto. In 1978 exactly 100 years after Ernst Mach first reported his discovery of the reflection phenomenon I published my Ph.D. thesis in which for the first time analytical transition criteria between the various shock wave reflection configurations were established.

Comprehensive Biophysics, 2012-04-12. Biophysics is a rapidly evolving interdisciplinary science that applies theories and methods of the physical sciences to questions of biology. Biophysics encompasses many disciplines including physics, chemistry, mathematics, biology, biochemistry, medicine, pharmacology, physiology and neuroscience and it is essential that scientists working in these varied fields are able to understand each other's research. *Comprehensive Biophysics Nine Volume Set* will help bridge that communication gap. Written by a team of researchers at the forefront of their respective fields under the guidance of Chief Editor Edward Egelman, *Comprehensive Biophysics Nine Volume Set* provides definitive introductions to a broad array of topics uniting different areas of biophysics research from the physical techniques for studying macromolecular structure to

protein folding muscle and molecular motors cell biophysics bioenergetics and more The result is this comprehensive scientific resource a valuable tool both for helping researchers come to grips quickly with material from related biophysics fields outside their areas of expertise and for reinforcing their existing knowledge Biophysical research today encompasses many areas of biology These studies do not necessarily share a unique identifying factor This work unites the different areas of research and allows users regardless of their background to navigate through the most essential concepts with ease saving them time and vastly improving their understanding The field of biophysics counts several journals that are directly and indirectly concerned with the field There is no reference work that encompasses the entire field and unites the different areas of research through deep foundational reviews Comprehensive Biophysics fills this vacuum being a definitive work on biophysics It will help users apply context to the diverse journal literature offering and aid them in identifying areas for further research Chief Editor Edward Egelman E I C Biophysical Journal has assembled an impressive world class team of Volume Editors and Contributing Authors Each chapter has been painstakingly reviewed and checked for consistent high quality The result is an authoritative overview which ties the literature together and provides the user with a reliable background information and citation resource [Catalog of Copyright Entries](#) Library of Congress.
