Kang, 2011-01-17 This book offers a critical re evaluation of three fundamental and interlocking themes in American

in regulating the political process This edited volume features contributions from some of the leading voices in election law

and social science The authors address the recurring questions for American democracy and identify new challenges for the

wisdom among political scientists has been that iron triangles operated among regulatory agencies the regulated industries

and members of Congress all presumably with a stake in preserving regulation that protected the industries from competition

Despite almost unanimous agreement among economists that such regulation was inefficient it seemed highly unlikely that

deregulation could occur Yet between 1975 and 1980 major deregulatory changes that strongly favored competition did take

place in a wide range of industries The results are familiar to airline passengers users of telephone service and trucking

freight shippers among others Martha Derthick and Paul J Quirk ask why this deregulation happened How did a diffuse

public interest prevail over the powerful industry and union interests that sought to preserve regulation Why did the

regulatory commissions which were expected to be a major obstacle to deregulation instead take the initiative on behalf of it

And why did influential members of Congress push for even greater deregulation The authors concentrate on three cases airlines trucking and telecommunications They find important similarities among the cases and discuss the implications of these findings for two broader topics the role that economic analysis has played in policy change and the capacity of the American political system for transcending narrow interests
