

The background of the entire cover is a photograph of an industrial facility, likely an oil refinery or chemical plant. Several tall smokestacks are visible, and a large, bright fire plume is rising from one of the central structures, casting a glow. The sky is a clear, pale blue. The title text is overlaid on this image.

Riding The Dragon Royal Dutch Shell The Fossil Fire:

Riding the Dragon Jack Doyle, 2002 **Diamond** Steve Lerner, 2006-02-17 The story of how a mixed income minority community in Louisiana's Chemical Corridor fought Shell Oil and won For years the residents of Diamond Louisiana lived with an inescapable acrid metallic smell the toxic bouquet of pollution and a mysterious chemical fog that seeped into their houses They looked out on the massive Norco Industrial Complex a maze of pipelines stacks topped by flares burning off excess gas and huge oil tankers moving up the Mississippi They experienced headaches stinging eyes allergies asthma and other respiratory problems skin disorders and cancers that they were convinced were caused by their proximity to heavy industry Periodic industrial explosions damaged their houses and killed some of their neighbors Their small African American mixed income neighborhood was sandwiched between two giant Shell Oil plants in Louisiana's notorious Chemical Corridor When the residents of Diamond demanded that Shell relocate them their chances of success seemed slim a community with little political clout was taking on the second largest oil company in the world And yet after effective grassroots organizing unrelenting fence-line protests seemingly endless negotiations with Shell officials and intense media coverage the people of Diamond finally got what they wanted money from Shell to help them relocate out of harm's way In this book Steve Lerner tells their story Around the United States struggles for environmental justice such as the one in Diamond are the new front lines of both the civil rights and the environmental movements and Diamond is in many ways a classic environmental justice story a minority neighborhood faced with a polluting industry in its midst fights back But Diamond is also the history of a black community that goes back to the days of slavery In 1811 Diamond then the Trepagnier Plantation was the center of the largest slave rebellion in United States history Descendants of these slaves were among the participants in the modern day Diamond relocation campaign Steve Lerner talks to the people of Diamond and lets them tell their story in their own words He talks also to the residents of a nearby white neighborhood many of whom work for Shell and have fewer complaints about the plants and to environmental activists and Shell officials His account of Diamond's 30 year ordeal puts a human face on the struggle for environmental justice in the United States **The World Through Our Eyes** Brigitta Natasha

Hanshaw, 2003-09-29 Since the end of the Cold War the world has become a different and increasingly volatile place where our lives are ever more intertwined with the lives of others around the globe a world of rising terrorism of clashing cultures and religions of expanding multi-national corporations of economic volatility environmental damage and much much more These changes have brought rise to problems that we can no longer push aside A new generation of international students brought together by arguably the top two international student conferences in the world the ISC Symposium and the World Business Dialogue seek to spark discourse and action to confront and address these problems In *The World through Our Eyes* students voice their concerns and pose potential solutions A world's eye view from an insider's perspective these unique viewpoints range from an essay on Swiss banking by a Swiss banker to a history of women in India by an Indian woman to

poverty in Kenya by a Kenyan national *The Offshore Imperative* Tyler Priest, 2009-10-12 After World War II the discovery and production of onshore oil in the United States faced decline As a result offshore prospects in the Gulf of Mexico took on new strategic value Shell Oil Company pioneered many of the early moves offshore and continues to lead the way into deepwater Tyler Priest's study is the first time the modern history of Shell Oil has been told in any detail Drawing on interviews with Shell retirees and many other sources Priest relates how the imagination talent and hard work of personnel at all levels shaped the evolution of the company The narrative also covers important aspects of Shell Oil's corporate evolution but the company's pioneering steps into the deepwater fields of the Gulf of Mexico are its signature achievement Priest's study demonstrates that engineers did not suddenly create methods for finding and producing oil and gas from astounding water depths Rather they built on a half century of accumulated knowledge and improvements to technical systems Shell Oil's story is unique but it also illuminates the modern history of the petroleum industry As Priest demonstrates this company's experiences offer a starting point for examining the understudied topics of strategic decision making scientific research management of technology and corporate organization and culture within modern oil companies as well as how these activities applied to offshore development tells a dramatic story of imaginative businessmen and engineers who propelled Shell forward in the search for ways to locate and recover oil from the depths of the sea Southwestern Historical Quarterly This book's narrative is sustained throughout by easily understood explanations of the technical details of drilling and production Journal of Southern History **Placebo as Medicine** Kiikpoye K. Aaron, Dawari George, 2010 Kiikpoye K Aaron teaches Political Science at the Department of Political and Administrative Studies University of Port Harcourt Nigeria

Fragile World William T. Cavanaugh, 2018-05-22 In *Fragile World* Ecology and the Church scholars and activists from Christian communities as far flung as Honduras the Philippines Colombia and Kenya present a global angle on the global ecological crisis in both its material and spiritual senses and offer Catholic resources for responding to it This volume explores the deep interconnections for better and for worse between the global North and the global South and analyzes the relationship among the physical environment human society culture theology and economics the integral ecology described by Pope Francis in *Laudato Si* Integral ecology demands that we think deeply about humans and the physical environment but also about the God who both created the world and sustains it in being At its root the ecological crisis is a theological crisis not only in the way that humans regard creation and their place in it but in the way that humans think about God For Pope Francis in *Laudato Si* the root of the crisis is that we humans have tried to put ourselves in God's place According to Pope Francis therefore A fragile world entrusted by God to human care challenges us to devise intelligent ways of directing developing and limiting our power **Lifeblood** Matthew T. Huber, 2013-08-01 If our oil addiction is so bad for us why don't we kick the habit Looking beyond the usual culprits Big Oil petro states and the strategists of empire Lifeblood finds a deeper and more complex explanation in everyday practices of oil consumption in American culture Those practices Matthew T

Huber suggests have in fact been instrumental in shaping the broader cultural politics of American capitalism How did gasoline and countless other petroleum products become so central to our notions of the American way of life Huber traces the answer from the 1930s through the oil shocks of the 1970s to our present predicament revealing that oil s role in defining popular culture extends far beyond material connections between oil suburbia and automobility He shows how oil powered a cultural politics of entrepreneurial life the very American idea that life itself is a product of individual entrepreneurial capacities In so doing he uses oil to retell American political history from the triumph of New Deal liberalism to the rise of the New Right from oil s celebration as the lifeblood of postwar capitalism to increasing anxieties over oil addiction Lifeblood rethinks debates surrounding energy and capitalism neoliberalism and nature and the importance of suburbanization in the rightward shift in American politics Today Huber tells us as crises attributable to oil intensify a populist clamoring for cheap energy has less to do with American excess than with the eroding conditions of life under neoliberalism *The Cultures of Economic Migration* Tope Omoniyi, 2016-03-16 This volume explores the processes of economic migration the social conditions that follow it and the discourses that underlie research into it Reflecting critically on economic migration and on the process of studying and creating knowledge about it the contributors address the question of whether recent enquiries into modernity bring a newer and better comprehension of the nature of dislocation and movement or whether these serve simply to replicate familiar modes of placing people and individuals The book is organized into perspectives in and on specific continents Europe Asia and Africa in order to explore notions regarding economic migration within and across regions as well as towards displacing the Eurocentrism of many studies of migration **Toxic Communities** Dorceta Taylor, 2014-06-20 Uncovers the systemic problems that expose poor communities to environmental hazards From St Louis to New Orleans from Baltimore to Oklahoma City there are poor and minority neighborhoods so beset by pollution that just living in them can be hazardous to your health Due to entrenched segregation zoning ordinances that privilege wealthier communities or because businesses have found the paths of least resistance there are many hazardous waste and toxic facilities in these communities leading residents to experience health and wellness problems on top of the race and class discrimination most already experience Taking stock of the recent environmental justice scholarship Toxic Communities examines the connections among residential segregation zoning and exposure to environmental hazards Renowned environmental sociologist Dorceta Taylor focuses on the locations of hazardous facilities in low income and minority communities and shows how they have been dumped on contaminated and exposed Drawing on an array of historical and contemporary case studies from across the country Taylor explores controversies over racially motivated decisions in zoning laws eminent domain government regulation or lack thereof and urban renewal She provides a comprehensive overview of the debate over whether or not there is a link between environmental transgressions and discrimination drawing a clear picture of the state of the environmental justice field today and where it is going In doing so she introduces new concepts and

theories for understanding environmental racism that will be essential for environmental justice scholars A fascinating landmark study *Toxic Communities* greatly contributes to the study of race the environment and space in the contemporary United States **Global Exchanges and Gender Perspectives in Africa** Jean-Bernard Ouédraogo, Roseline M.

Achieng', 2011 The global perspectives adopted in this volume by the authors from different academic disciplines and social experiences ought not to be locked in sterile linearity which within process of globalisation would fail to perceive the irreversible opening up of the worlds of the south There is the need within the framework of the analyses presented here to quite cogently define the sense of the notion of the market The market here does not refer to saving or the localised exchange of goods a perspective which is imposed by normative perceptions In fact a strictly materialistic reading of exchange would be included since every social practice and interaction implies a communitarian transaction meanwhile the exchange system under study here broadens to root out the obligation of the maximisation of mercantile profit from the cycle of exchange Trade here would have a meaning closer to those of old one of human interaction in a way that one could also refer to *bon commerce* between humans In one way trade places itself at the heart of social exchanges included the power of money and is carried along by a multitude of social interactions The reader is called upon to take into account the major mercantile formations of the social trade system the market society without forgetting the diversity of exchange routes as well as the varying modalities of social construction at the margins and within market logics those of implicit value in trade between humans which the texts herein also seek to review The age old project of restructuring the domestic economy the market society as it has developed in the West whence it has set out to conquer the whole wide world places at the very centre of the current capitalist expansion the challenge of imperatively reshaping gender identity *inter alia* in market relations Technoscience and Environmental Justice Gwen Ottinger, Benjamin R. Cohen, 2011-09-02 Case studies exploring

how experts encounters with environmental justice are changing technical and scientific practice Over the course of nearly thirty years the environmental justice movement has changed the politics of environmental activism and influenced environmental policy In the process it has turned the attention of environmental activists and regulatory agencies to issues of pollution toxics and human health as they affect ordinary people especially people of color This book argues that the environmental justice movement has also begun to transform science and engineering The chapters present case studies of technical experts encounters with environmental justice activists and issues exploring the transformative potential of these interactions *Technoscience and Environmental Justice* first examines the scientific practices and identities of technical experts who work with environmental justice organizations whether by becoming activists themselves or by sharing scientific information with communities It then explore scientists and engineers activities in such mainstream scientific institutions as regulatory agencies and universities where environmental justice concerns have been partially institutionalized as a response to environmental justice activism All of the chapters grapple with the difficulty of transformation that experts face but the

studies also show how environmental justice activism has created opportunities for changing technical practices and in a few cases has even accomplished significant transformations *Reputation Risk and Globalisation* Terry

O'Callaghan,2016-10-28 Recently multinational corporations have begun to reinvent themselves as socially responsible actors largely in response to anti corporate activist pressure The author argues that a concern with corporate reputation is leading to an ideational shift in corporate behaviour in essence it is disciplining their behaviour This innovative exploration of the idea of a self regulating corporation in an era of globalisation first examines the link between corporate reputation corporate behaviour and self regulation and then goes on to compare and contrast various studies of multinational corporations that have sought to self regulate Terry O Callaghan includes a multifaceted critique of anti corporate activists This acknowledges both the dangers that multinational corporations pose to communities and that anti corporate activists are the first group to understand the potential risk of targeted campaigns to corporate reputations He also illustrates his points using three case studies of companies that have attempted to self regulate Royal Dutch Shell the Toyota Motor Corporation and Interface Inc Undergraduate and postgraduate students of international business management and business ethics will be interested in the essential topics covered in this book Academics and practitioners alike will appreciate its accessible lessons about

reputational capital and holding multinational corporations accountable **Refining Expertise** Gwen Ottinger,2013-03-04 An intriguing and impressive account of corporate social responsibility and neoliberalism writ large on the ground in action in chemical plant communities in Louisiana Ottinger effectively illustrates how in complex culturally saturated ways corporate commitment to responsible care has created critical challenges for environmental activism and justice Kim Fortun Rensselaer Polytechnic Institute Residents of a small Louisiana town were sure that the oil refinery next door was making them sick As part of a campaign demanding relocation away from the refinery they collected scientific data to prove it Their campaign ended with a settlement agreement that addressed many of their grievances but not concerns about their health Yet instead of continuing to collect data residents began to let refinery scientists assertions that their operations did not harm them stand without challenge What makes a community move so suddenly from actively challenging to apparently accepting experts authority *Refining Expertise* argues that the answer rests in the way that refinery scientists and engineers defined themselves as experts Rather than claiming to be infallible they began to portray themselves as responsible This work drives home the need for both activists and politically engaged scholars to reconfigure their own activities in response in order to advance community health and robust scientific knowledge about it Gwen Ottinger is Assistant Professor in Interdisciplinary Arts and Sciences at the University of Washington Bothell where she teaches in the Science Technology Society and Environmental Studies majors She is co editor of *Technoscience and Environmental Justice* Expert Cultures in a Grassroots Movement **Energy Supply** Lisa Yount,2014-05-14 Provides an overview of issues related to energy supply

distribution and use including history terminology biographical information on important individuals and a complete

annotated bibliography *Energy Supply and Renewable Resources* Regina Anne Kelly, 2010-05-12 Examines the history behind industrialized nations dependence on natural resources particularly fossil fuels as well as developing nations increasing consumption of these resources **A History of Royal Dutch Shell: Appendices. Figures and explanations, collective bibliography and index** Joost Jonker, J. L. van Zanden, Stephen Howarth, Keetie E. Sluyterman, 2007 The DVDs offer further valuable and exciting additions to the three main volumes of the work as well as visual explanations of significant technical processes they provide a selection of Shell films advertisements and photographs and perhaps most importantly they cover the complete history of Royal Dutch shell from its beginning up to the present with unrivalled and rarely used footage from Shell's own rich archive BACK COVER of Vol 4 **Underground Gas Storage** D. J. Evans, R. A. Chadwick, 2009 The UK became a net importer of natural gas in 2004 and by 2020 will import up to 90% of its requirements leaving it vulnerable to increasing energy bills and risk of disruption to supply New pipelines to Europe and improvements to interconnectors will meet some demand but Government recognises the need for increased gas storage capacity best met by the construction of underground storage facilities Energy security has also raised the likelihood of a new generation of coal fired power stations which to be environmentally viable will require clean coal technologies with near zero greenhouse gas emissions A key element of this strategy will be underground CO₂ storage This volume reviews the technologies and issues involved in the underground storage of natural gas and CO₂ with examples from the UK and overseas The potential for underground storage of other gases such as hydrogen or compressed air linked to renewable sources is also reviewed

Grounds for Action Gwen Ellen Ottinger, 2005 **Governing Natural Resources for Sustainable Peace in Africa** Obasesam Okoi, Victoria R Nalule, 2023-12-18 This book examines the dynamics of natural resource conflicts in Africa and explores the different governance approaches for securing sustainable peace One of the most prominent challenges facing Africa today is the consequences of natural resource extraction While these resources hold the potential for economic transformation across Africa their extraction also comes with a range of environmental social and economic consequences including issues related to governance This book assembles a unique cohort of peacebuilding environmental justice and sustainable development scholars and practitioners from Africa and beyond to examine the dynamics of natural resource conflict and explore the governance approaches that offer pathways for sustainable peace in Africa Drawing on case studies and empirical lessons from the Horn of Africa Southern Africa West Africa East Africa and the Central Sahel region along with the African Union the multidisciplinary contributors offer fresh insights into the nature of natural resource conflict in Africa delve deeper into the complexities of natural resource governance and highlight the interplay between resource governance and sustainable peace By shedding light not only on Africa's experiences and vulnerabilities but also on the challenges of natural resource governance this book fills a crucial gap in understanding the connection between natural resource governance conflict and pathways for sustainable peace in Africa Drawing on a range of disciplinary perspectives

this book will be of interest to students and scholars of natural resource governance peace and conflict studies environmental policy and justice sustainable development security studies and African studies more widely **Powerful Motors** Elana Shever, 2008
