Risk Assessment Of In Ready-to-eat Foods Interpretative Summary:

Risk Assessment of Listeria Monocytogenes in Ready-to-eat Foods World Health Organization, 2004 Cases of listeriosis appear to be predominantly associated with ready to eat products. FAO and WHO have undertaken a risk assessment of Listeria monocytogenes in ready to eat foods prepared and reviewed by an international team of scientists. Input was received from several international fora including expert consultations and Codex Alimentarius committee meetings as well as via public and peer review. This interpretative summary provides an overview of how the risk assessment was undertaken and the results. In particular, it provides information relevant to risk managers addressing problems posed by this pathogen in ready to eat foods. It includes answers to the specific risk management questions posed by the Codex Committee on Food Hygiene and outlines the issues to be considered when implementing control measures including the establishment of microbiological criteria.

Microbiological risk assessment guidance for food, 2021-06-07 **Risk Assessment of Listeria Monocytogenes in Ready-to-eat Foods**, 2004 Cases of listeriosis appear to be predominantly associated with ready to eat products. FAO and WHO have undertaken a risk assessment of Listeria monocytogenes in ready to eat foods prepared and reviewed by an international team of scientists. Input was received from several international fora including expert consultations and Codex Alimentarius committee meetings as well as via public and peer review. This technical report provides complete documentation of the risk assessment: the approaches taken, the data and methodology used, and the results. It also contains four example assessments addressing the risk of listeriosis associated with fresh milk, ice cream, fermented meats, and cold smoked fish. These products were selected to represent typical classes of ready to eat products.

Prevention and control of microbiological hazards in fresh fruits and vegetables - Part 1 & 2: General principles. Meeting report World Health Organization, Food and Agriculture Organization of the United Nations, 2024-01-10 Fruits and vegetables are an important part of a healthy diet and are protective against many chronic health conditions. Yet fresh fruits and vegetables have been consistently implicated in food safety incidents involving microbiological hazards around the globe for decades. In response to requests of the Codex Committee on Food Hygiene concerning microbiological hazards in fresh fruits and vegetables and to update and expand the information available in Microbiological hazards in fresh leafy vegetables and herbs (MRA14) which was published in 2008, FAO and WHO convened a series of expert meetings in 2021 to 2022. The purpose of the meetings was to collect, review, and discuss relevant measures to control microbiological hazards from primary production to point of sale in fresh ready to eat (RTE) and minimally processed fruits and vegetables, including leafy vegetables. The experts made an effort to update and include any recent trends in commodity and pathogen pairing or pathogen occurrence and presence, with a focus on emerging and neglected pathogens. The primary production in open fields was investigated by considering the location, adjacent land use, topography, and climate; prior land use; water, wildlife, animal, and human intrusion; soil amendments; and harvest and packing. The experts

also worked on primary production in protected facilities minimal processing transport distribution and point of sale and also the gaps in mitigation and interventions measures The advice herein is useful for both risk assessors and risk managers at national and international levels and those in the food industry working to control the relevant hazards in the fresh fruits and vegetables the development of improved mitigation and intervention measures

Measures for the control of Campylobacter spp. in chicken meat Food and Agriculture Organization of the United Nations, World Health Organization, 2024-03-08 To collate and assess the most recent scientific information relevant to the control of thermotolerant Campylobacter species in broiler production and chicken meat the Joint FAO WHO Expert Meeting on Microbiological Risk Assessment JEMRA convened a meeting in Rome Italy in February 2023 The expert committee reviewed the available data on Campylobacter control including scientific literature published from 2008 to October 2022 and data submitted in response to a call for data for this meeting The experts 1 determined the quality and quantity of evidence of control measures for Campylobacter 2 evaluated the impact of measures to control Campylobacter in the broiler production chain 3 determined which hazard based interventions pertained specifically to Campylobacter and which were general to the control of foodborne pathogens in the pre and post harvest broiler production chain and 4 reviewed and recommended revisions to the Guidelines for the Control of Campylobacter and Salmonella in Chicken Meat This report describes the output of this expert meeting and the advice herein is useful for both risk assessors and risk managers at national and international levels and those in the food industry working to control the hazard in poultry

Measures for the control of non-typhoidal Salmonella spp. in poultry meat World Health Organization, Food and Agriculture Organization of the United Nations, 2024-01-15 In response to a request from the 52nd Session of the Codex Committee on Food Hygiene CCFH the FAO WHO Joint Expert Meetings on Microbiological Risk Assessment JEMRA convened this meeting to collate and assess the most recent scientific information relating to the control of non typhoidal NT Salmonella spp in chicken meat The assessment included a review of the Codex Guidelines for the Control of Campylobacter and Salmonella in Chicken Meat CXG 78 2011 The Campylobacter will be reviewed by another meeting The expert consultation noted that no single control measure was sufficiently effective in reducing either the prevalence or the level of contamination of broilers and poultry meat with NT Salmonella spp Instead it was emphasized that control strategies based on multiple intervention steps would have the greatest impact on controlling NT Salmonella spp in the broiler production chain This report describes the output of this expert meeting and the advice herein is useful for both risk assessors and risk managers at national and international levels and those in the food industry working to control the hazard in poultry

Microbiological Hazards in Fresh Leafy Vegetables and Herbs World Health Organization, 2008 Problems linked with pathogens in fresh produce including the associated public health and trade implications have been reported in a number of countries worldwide Furthermore from 1980 to 2004 the global production per annum of fruit and vegetables grew by 94% and fruit and vegetables are a critical

component of a healthy diet Thus ensuring the safety of these products is of high importance Reported outbreaks associated with leafy vegetables and herbs have been notable for the wide geographical distribution of the contaminated products the high numbers of consumers exposed and thus the large number of cases This meeting addressed the pathways for contamination survival and persistence of microbiological hazards associated with leafy vegetables and herbs and the potential management options from primary production through to the consumer Consideration was given to all aspects of the farm to fork continuum i e pre harvest and post harvest
