Critical Space Infrastructures Alexandru Georgescu, Adrian V. Gheorghe, Marius-Ioan Piso, Polin papilinho F. Katina, 2019-03-25 This book introduces readers to the topical area of CSI critical space infrastructure which is defined as an emerging domain of systems of systems encompassing hardware workforce environment facilities business and organizational entities Further it includes unmanned air systems satellites rockets space probes and orbital stations and involves multi directional interactions essential for maintenance of vital societal functions i.e. health safety economic and social well being the loss or disruption of which would have significant impact on virtually any nation The topics covered include the main elements of CSI CSI taxonomy effects of CSI on other infrastructure systems establishing quantitative and qualitative parameters global and national effects of CSI failure cascading disruptive phenomena chilling effects in various fields CSI protection deliberate threats to space systems e.g. electromagnetic pulse attacks space governance and a path forward for CSI research Modern society is highly dependent on the continuous operation of critical infrastructure systems for the supply of crucial goods and services including among others the power supply drinking water supply and transportation systems yet space systems which are critical enablers for several commercial scientific and military applications are rarely discussed This book addresses this gap

Evaluation of Microbial Risk Assessment Techniques and Applications J. A. Soller, A. W. Olivieri, 2003-12-01 This investigation reviewed and evaluated methodologies used for microbial risk assessment with respect to their applicability for reclaimed water applications The investigation was comprised of five primary components a comprehensive database of articles reports and books describing microbial risk assessment methodologies was established and reviewed Risk assessment techniques and models were identified for estimating the public health risk from exposure to microorganisms via reclaimed water

applications Two models were identified for further evaluation a static individual based and a dynamic population based In the third component the two models were evaluated to differentiate between the conditions under which models predict similar and substantially different estimations of risk Through numerical simulation exposure pathogen combinations were identified when it may be appropriate to use the less complex static model Case study risk assessment scenarios demonstrated the model selection process for three realistic yet hypothetical reclaimed water scenarios The fourth component presents a constraint analysis for existing reuse regulations The constraint analysis is carried out by documenting the existing reuse regulations The constraint analysis is carried out by documenting the existing regs in three states for landscape irrigation and uses that comparison as a starting point to identify how microbial risk assessment may be useful within the context of existing and potential future water reuse regulations The investigation concludes by identifying criteria for a computer interface that would allow regulatory and or municipal agencies utilities to take advantage of the analysis discussed in the report This publication can also be purchased and downloaded via Pay Per View on Water Intelligence Online click on the Pay Per View icon below

Managing Critical Infrastructure Risks Igor Linkov, Richard J. Wenning, Gregory A. Kiker, 2007-09-17 This book offers a state of the science approach to current environmental security threats and infrastructure vulnerabilities It emphasizes beliefs that the convergence of seemingly disparate viewpoints and often uncertain and limited information is possible only by using one or more available risk assessment methodologies and decision making tools such as risk assessment and multi criteria decision analysis MCDA

Methods for Risk Assessment of Transgenic Plants Klaus Ammann, Yolande Jacot, Gösta Kjellsson, Vibeke Simonsen, 2012-12-06 The Berne Symposium invited leading scientists of risk assessment research with transgenic crops on an international level in order to enhance the discussion regulators and members of the biotech industry The goal was to determine the status quo and also to make progress in times of a first global spread of transgenes in agrosystems about risk assessment The dialogue between scientists regulators and industry

representatives also revealed some lacunes of risk assessment research which will have to be filled in the future We still lack longterm experience for which we will have to collect data with scientific precision The symposium concluded asking for a risk oriented longterm monitoring system based on critical science and hard data This volume presents the discussion sessions as well as the scientific contributions and thus mirrors the risk assessment debate based not on exaggerated negative scenarios but on critical science and hard data OECD Reviews of Risk Management Policies Good Governance for Critical Infrastructure Resilience OECD,2019-04-17 Critical infrastructures are the backbone of modern interconnected economies The disruption of key systems and essential services such as telecommunications energy or water supply transportation or finance can cause substantial economic damage This report looks at how to boost critical infrastructure resilience in a dynamic risk landscape and discusses policy options and governance models to promote up front resilience investments *Sustainable Business Models* Adam Jabłoński,2019-01-25 This book is a printed edition of the Special Issue Sustainable Business Models that was published in Sustainability **The Protection of Critical Energy Infrastructure Against Emerging Security Challenges** A. Niglia,2015-10-09 Critical energy infrastructure such as oil and gas pipelines storage facilities and electricity grids are increasingly becoming the target of criminal and terrorist attacks This book contains the papers presented at the NATO Advanced Research Workshop ARW The Protection of Critical Energy Infrastructure against Emerging Security Challenges held in Tbilisi Georgia in November 2014 The main objective of this ARW was to investigate the security risks to critical energy infrastructure namely cyber and terrorist attacks as well as to identify opportunities for public private partnerships to meet these risks The workshop served as a forum for experts and stakeholders from government academia and the private sector to exchange information and best practice and to produce findings and recommendations for integrated security solutions involving close cooperation between public and private stakeholders Underlining the importance of a holistic approach to European energy security this book will be of interest to all those involved in protecting critical energy infrastructure from a diverse range of threats *Defense Science Board 2003 summer study on DoD roles and missions in homeland security* ,2003 The United States faces stealthy adversaries who have demonstrated both motives and means to inflict grave damage on the U S homeland The nation s strategy in response to this type of adversary is clear engage the threat as far as possible from the U S homeland on its turf This approach requires a multi agency government effort with the Department of Defense DoD playing a major role A capability to protect the homeland is a necessary complement to the capability of strategic reach against these asymmetric threats However the challenges of homeland protection are complex There are so many assets to protect so many modes of attack available to adversaries and so many organizations federal state local and private involved that understandably both the conceptual thinking and the capabilities required are still immature Responsibilities and authorities must be assigned and operative terms homeland defense and homeland security for example need to be defined The Defense Science Board DSB read with

care current definitions and wrestled with inventing new ones In the end instead of focusing on precise distinctions between various terms the board adopted a broad framework consistent with the study terms of reference within which to consider homeland protection issues Maturing the conceptual framework and capabilities related to homeland protection the DSB believes requires a holistic approach However organizational boundaries inhibit such an approach Thus fostering a holistic approach to protecting the homeland is a guiding theme for this study and the recommendations reflect this theme
