Why Managers and Companies Take Risks Les Coleman,2007-05-23 This book uses risk in its dictionary meaning as the probability of an undesirable outcome and has two research questions when managers make decisions what leads them to choose a risky alternative and what determines whether the decision proves correct Answers to these questions form a model of decision making that explains the process and results of managers risk taking in the real world There is an extensive literature on risk and decision making because the topic has been of interest in many disciplines since at least the 18 century Thus insights on the research questions are available from studies of animals humans and organisations and have been drawn by scholars in biology psychology finance and management Even so there is a large gap as most studies are conducted away from corporate settings and use subjects with limited decision experience The few studies set in real world conditions tend to concentrate on just a single aspect of decision makers attributes setting and behaviour and on either decision choices or outcomes The empirical work in this book is designed to fill part of this gap *Enterprise Risk Management* Stefan Hunziker,2019-05-17 This textbook demonstrates how Enterprise Risk Management creates value in strategic and decision making processes The author introduces modern approaches to balancing risk and reward based on many examples of medium sized and large companies from different industries Since traditional risk management in practice is often an independent stand alone process with no impact on decision making processes it is unable to create value and ties up resources in the company unnecessarily Herewith he serves students as well as practitioners with modern approaches that promote a connection between ERM and corporate management The author demonstrates in a didactically appropriate

manner how companies can use ERM in a concrete way to achieve better risk reward decisions under uncertainty Furthermore theoretical and psychological findings relevant to entrepreneurial decision making situations are incorporated This textbook has been recommended and developed for university courses in Germany Austria and Switzerland
