Risk The Policy Implications Of Risk Compensation And Plural Rationalities:

Risk John Adams,2002-09-11 Risk compensation postulates that everyone has a risk thermostat and that safety measures that do not affect the setting of the thermostat will be circumvented by behaviour that re establishes the level of risk with which people were originally comfortable It explains why for example motorists drive faster after a bend in the road is straightened Cultural theory explains risk taking behaviour by the operation of cultural filters It postulates that behaviour is governed by the probable costs and benefits of alternative courses of action which are perceived through filters formed from all the previous incidents and associations in the risk taker s life Risk should be of interest to many readers throughout the social sciences and in the world of industry business engineering finance and public administration since it deals with a fundamental part of human behaviour that has enormous financial and economic implications

An Analysis of Regulatory Frameworks for Wireless Communications, Societal Concerns and Risk Haim Mazar,2009 This thesis analyses how and why culture and geography influence the allocation and licensing of the radio frequency RF spectrum in different nations Based on a broad comparative study of 235 countries an inter disciplinary approach is used to explore regulatory frameworks and attitudes toward risk In addition detailed case studies of the UK France the US and Ecuador provide deeper insights into the main contrasting regulatory styles Three alternative sociological theories are used to analyse and explain the results for both the in depth and broad brush studies The Cultural Theory of Mary Douglas and co workers is first used to categorise countries in terms of perceptual filters The empirical findings indicate some countries to be apparently exceptional in their behaviour The theory of Bounded Rationality is used to investigate and explain these apparent irrationalities Finally Rational Field Theory shows how beliefs and values guide administrations in their RF regulation A number of key factors are found to dominate and patterns emerge The European RF harmonisation is unique Following European unification wireless regulation is divided into two major camps the EU and the US which differ in their risk concerns approach to top down mandated standards allocation of RF spectrum to licence exempt bands and type approval process The adoption of 3G cellular UMTS versus CDMA2000 and digital TV standards DVB T ATSC ISDB T around the world reflects geopolitical and colonial influence The language of a country is a significant indicator of its analogue TV standard SECAM PAL NTSC Interestingly the longitude of a country to a fair extent defines RF allocation Africa and West Asia follow Europe whereas the Americas approximate the US RF regulation and risk tolerability differ between tropical and non tropical climates The collectivised centralised versus the individualised market based rationalities result in different regulatory frameworks and contrasting societal and risk concerns The success of the top down European GSM and the bottom up Wi Fi standards reveal how the central planning and market based approaches have thrived Attitudes to RF human hazards and spurious emissions levels reveal that the US Canada and Japan are more tolerant of these radiation risks than Europe Australia Canada New Zealand UK and USA encourage technological innovation A practical benefit of this study is that it will

give regulators more freedom to choose a rational RF licensing protocol by better understanding the possibly self imposed boundaries of cultural and geographical factors which are currently shaping allocation Academically there is utility in undertaking a cultural and geographic analysis of a topic that is mostly the domain of engineering economic and legal analysts

Understanding and Managing Risk Attitude Dr David Hillson, Ms Ruth Murray-Webster, 2012-03-01 Despite many years of development risk management remains problematic for the majority of organizations One common challenge is the human dimension in other words the way people perceive risk and risk management Risk management processes and techniques are operated by people each of whom is a complex individual influenced by many different factors And the problem is compounded by the fact that most risk management involves people working in groups This introduces further layers of complexity through relationships and group dynamics David Hillson's and Ruth Murray Webster's *Understanding and Managing Risk Attitude* will help you understand the human aspects of risk management and to manage proactively the influence of human behaviour on the risk process The authors introduce a range of models perspectives and examples to define and detail the range of possible risk attitudes looking both at individuals and groups Using leading edge thinking on self awareness and emotional literacy they develop a powerful approach to address the most common shortfall in current risk management the failure to manage the human aspects of the process All this is presented in a practical and applied framework rather than as a theoretical or academic treatise based on the authors shared experiences and expertise rather than empirical research Anyone involved in implementing risk management will benefit from this book including risk practitioners senior managers and directors responsible for corporate governance project managers and their teams It is also essential reading for HR professionals and others interested in organizational or behavioural psychology This second edition is updated to strengthen the understanding of individual risk attitudes and reinforce what individuals can do to manage those risk attitudes that are leading them away from their objectives For people who want to embrace this subject the book highlights ways forward that are proven and practical

Respect for Autonomy and Technological Risk Lotte Asveld, 2008 Other People's Money John Kay, 2015-09-22 The finance sector of Western economies is too large and attracts too many of the smartest college graduates Financialization over the past three decades has created a structure that lacks resilience and supports absurd volumes of trading The finance sector devotes too little attention to the search for new investment opportunities and the stewardship of existing ones and far too much to secondary market dealing in existing assets Regulation has contributed more to the problems than the solutions Why What is finance for John Kay with wide practical and academic experience in the world of finance understands the operation of the financial sector better than most He believes in good banks and effective asset managers but good banks and effective asset managers are not what he sees In a dazzling and revelatory tour of the financial world as it has emerged from the wreckage of the 2008 crisis Kay does not flinch in his criticism we do need some of the things that Citigroup and Goldman Sachs do but we do not need Citigroup and Goldman to do them And many of the things done by Citigroup and Goldman do not need to be done at all The finance sector needs to be reminded of its primary purpose to manage other people's money for the benefit of businesses and households It is an aberration when some of the finest mathematical and scientific minds are tasked with devising algorithms for the sole purpose of exploiting the weakness of other algorithms for

Environmental Modelling Keith Beven, 2018-09-03 Uncertainty in the predictions of science when applied to the environment is an issue of great current relevance in relation to the impacts of climate change protecting against natural and man made disasters pollutant transport and sustainable resource management However it is often ignored both by scientists and decision makers or interpreted as a conflict or disagreement between scientists This is not necessarily the case the scientists might well agree but their predictions would still be uncertain and knowledge of that uncertainty might be important in decision making Environmental Modelling An Uncertain Future introduces students scientists and decision makers to the different concepts and techniques of uncertainty estimation in environmental prediction the philosophical background to different concepts of uncertainty the constraint of uncertainties by the collection of observations and data assimilation in real time forecasting techniques for decision making under uncertainty This book will be relevant to environmental modellers practitioners and decision makers in hydrology hydraulics ecology meteorology and oceanography geomorphology geochemistry soil science pollutant transport and climate change A companion website for the book can be found at www.uncertainfuture.org.uk **OECD Papers**, 2002 [El dinero de los demás](#) John Kay, 2017-11-10 El sector financiero es sin duda necesario pero lo es también todo lo que le rodea En los últimos tiempos el mundo de las finanzas ha crecido demasiado se ha distanciado de los negocios ordinarios y de la vida cotidiana para convertirse en una industria muy rentable que principalmente comercia consigo misma habla consigo misma y se juzga a sí misma según unas reglas propias El afamado y prestigioso economista John Kay pone el dedo en la llaga y expone una incisiva crítica al actual sector financiero que debe replantearse sus principios y metas y sobre todo no puede olvidar que su principal cometido es administrar un dinero que ha sido creado fuera de su órbita y que no es suyo *Risco e Causalidade - 2a ED - 2025* Rafael Viola, 2025-08-11 Algumas características se apresentaram na inquietação do Autor Rafael para formula

comprehensive approach Such a solution is likely to affect virtually everyone in the Pacific Northwest Ensuring public understanding of and support for species restoration policies is especially important because many of such policies involve making difficult trade offs This issue is especially relevant to the situation in Oregon where citizens are directly involved in environmental policy making thus public support for salmon restoration options is a vital component of the policy process This study was designed to identify the major factors influencing public support for salmon restoration policies including policy relevant knowledge risk perception ideological and attitudinal factors as well as a sense of political efficacy and social trust Key findings indicate that ideological and attitudinal factors are the most important predictors of public support for salmon restoration alternatives such as removal of hydroelectric dams limiting certain agricultural and forestry practices elimination of hatcheries and urban stream protection measures Ideological and attitudinal variables have both direct and indirect impacts on policy support In addition higher levels of social trust and a sense of political efficacy also led to stronger support for salmon restoration policies The results presented in this study suggest the need for a more holistic approach to understanding the sources and assessing the limits of public support for salmon restoration options In general both outreach and research activities should concentrate on overcoming the negative impacts of ideological and attitudinal cleavages and reconciling seemingly insurmountable differences in opinions on salmon policy Providing additional knowledge should be tailored to the needs of the various constituencies and should be sensitive to a wide range of ideological stances and attitudinal positions

Proceedings, 1994 [Rethinking Risk and the Precautionary Principle](#) Julian Morris, 2000-09-19 *Rethinking Risk and the Precautionary Principle* challenges the claim that the precautionary principle is an appropriate guide to public policy decision making in the face of uncertainty The precautionary principle is frequently invoked as a justification for regulating human activities From bans on the use of growth hormones in cattle to restrictions on children s playground activities precautionary thinking seems to be taking over our lives As the contributors to this book show such an approach is of dubious utility and may even be counterproductive This is a timely and important contribution to the debate on how to manage risk in the modern world The editor Julian Morris is Director of the Environment and Technology Programme at the Institute of Economic Affairs in London He has written widely on issues relating to environmental protection and technological development Up to date discussion of current issues and scientific controversies Challenges the claim that the precautionary

principle is an appropriate guide to public policy decisions
