Green, 1999-05-01 Describes provides procedures for risk uncertainty for U S Army Corps of Engineers ACE flood damage reduction studies The guidance presented procedures described in this manual apply to all ACE elements major subordinate commands labs field operating activities having civil works responsibilities The procedures described herein lead to estimation of expected benefits of proposed flood damage reduction plans using risk uncertainty analysis Quantitative qualitative methods of representing the likelihood consequences of exceedance of the capacity of selected measures are also included Illustrated **Risk-based Analysis for Flood Damage Reduction Studies**, 1996 *Risk-based Analysis for Corps Flood Project Studies* Earl E. Eiker, 1996 **Workshop on Risk-based Analysis for Flood Damage Reduction Studies, 18-21 October 1994, Omaha, Nebraska**, 1994 *Risk Analysis and Uncertainty in Flood Damage Reduction Studies* National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Committee on Risk-Based Analysis for Flood Damage Reduction, 2000-10-20 Reducing flood damage is a complex task that requires multidisciplinary understanding of the earth sciences and civil engineering In addressing this task the U S Army Corps of Engineers employs its expertise in hydrology hydraulics and geotechnical and structural engineering Dams levees and other river training works must be sized to local conditions geotechnical theories and applications help ensure that structures will safely withstand potential hydraulic and seismic forces and economic considerations must be balanced to ensure that reductions in flood damages are proportionate with project costs and associated impacts on social economic and environmental values A new National Research Council report *Risk Analysis and Uncertainty in Flood Damage Reduction Studies* reviews the Corps of Engineers risk based techniques in its flood damage reduction studies and makes recommendations for improving these techniques Areas in which the Corps has made good progress are noted and several steps that could improve the Corps risk based techniques in engineering and economics applications for flood damage reduction are identified The report also includes recommendations for improving the federal levee certification program for broadening the scope of flood damage reduction planning and for improving communication of risk based concepts **Flood Handbook** Saeid Eslamian, Faezeh A. Gareth Pender, Hazel Faulkner, 2010-12-01 Approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years Worldwide there has been a move from a strategy of flood defence to one of flood risk management Flood risk management includes flood prevention using hard defences where appropriate but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur This change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically environmentally and in terms of social equity Flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding but also the consequences This is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change while socio economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned Flood Risk Science and Management provides an extensive and comprehensive synthesis of current research in flood management providing a multi disciplinary reference text covering a wide range of flood management topics Its targeted readership is the international research community from research students through to senior staff and flood management professionals such as engineers planners government officials and those with flood management responsibility in the public

sector By using the concept of case study chapters international coverage is given to the topic ensuring a world wide relevance **Whitewater River Basin Feasibility Report** ,2000
