The Economics of Continuous-Time Finance Bernard Dumas, Elisa Luciano, 2017-11-10 An introduction to economic applications of the theory of continuous time finance that strikes a balance between mathematical rigor and economic interpretation of financial market regularities This book introduces the economic applications of the theory of continuous time finance with the goal of enabling the construction of realistic models particularly those involving incomplete markets Indeed most recent applications of continuous time finance aim to capture the imperfections and dysfunctions of financial markets characteristics that became especially apparent during the market turmoil that started in 2008 The book begins by using discrete time to illustrate the basic mechanisms and introduce such notions as completeness redundant pricing and no arbitrage It develops the continuous time analog of those mechanisms and introduces the powerful tools of stochastic calculus Going beyond other textbooks the book then focuses on the study of markets in which some form of incompleteness volatility heterogeneity friction or behavioral subtlety arises After presenting solutions methods for control problems and related partial differential equations the text examines portfolio optimization and equilibrium in incomplete markets interest rate and fixed income modeling and stochastic volatility Finally it presents models where investors form different beliefs or suffer frictions form habits or have recursive utilities studying the effects not only on optimal portfolio choices but also on equilibrium or the price of primitive securities The book strikes a balance between mathematical rigor and the need for economic interpretation of financial market regularities although with an emphasis on the latter

New Horizons in Medical Anthropology Margaret

Lock, Mark Nichter, 2003-09-02 *New Horizons in Medical Anthropology* is a festschrift in honor of Charles Leslie whose influential career helped shape this subfield of anthropology. This collection of cutting edge essays explores medical innovation and medical pluralism at the turn of the 21st century. The book accomplishes two things: it reflects recent research by medical anthropologists working in Asia who have been inspired by Charles Leslie's writing on such topics as medical pluralism and the early emergence of what has become a globalized biomedicine; the social relations of therapy management and the relationship between the politics of the state and discourse about the health of populations; illness and medicine. The book also takes up lesser known aspects of Leslie's work: his contribution as an editor and the role he played in carrying the field forward; his ethics as a medical anthropologist committed to humanism and sensitive to racism and eugenics; and the passion he inspired in his co-workers and students. Charles Leslie is a remarkable and influential social scientist. *New Horizons in Medical Anthropology* is a fitting tribute to a sensitive scholar whose theories and codes of practice provide an essential guide to future generations of medical anthropologists.

Handbook of Insurance Georges Dionne, 2013-12-02 This new edition of the *Handbook of Insurance* reviews the last forty years of research developments in insurance and its related fields. A single reference source for professors, researchers, graduate students, regulators, consultants, and practitioners, the book starts with the history and foundations of risk and insurance theory, followed by a review of prevention and precaution, asymmetric information, risk management, insurance pricing, new financial innovations, reinsurance, corporate governance, capital allocation, securitization, systemic risk, insurance regulation, the industrial organization of insurance markets, and other insurance market applications. It ends with health insurance, longevity risk, long term care insurance, life insurance, financial products, and social insurance. This second version of the *Handbook* contains 15 new chapters. Each of the 37 chapters has been written by leading authorities in risk and insurance research; all contributions have been peer reviewed, and each chapter can be read independently of the others.

Theories of Uncertainty and Risk across Different Modernities Patrick Brown, 2018-12-07 Setting out to challenge various common assumptions in risk research, this collection explores how uncertainty is handled in a range of social contexts across the globe. Social science research often emphasises the salience of risk and uncertainty for grasping the dynamics of late modern societies, with theoretical frameworks tending to associate the emergence of risk with particular, fairly homogenous European or North Western paths of modernisation. These theoretical narratives can be seen as shaping various assumptions regarding risk cultures, not least associations with post-traditional, largely secular and liberal characteristics. Risk is therefore analysed in terms of modern, active, rational citizens; meanwhile, faith, hope, or magic are implicitly relegated to the past, the oriental, the passive, and/or the irrational. Central to the book is the consideration of risk across a range of different modernities. While the precise meaning and organisational processes of risk vary, we see the common combining of risk, faith, magic, and hope as people go forward amid uncertain circumstances. Whether seeking health amid illness, survival amid flooding, or safety amid migration, we explore the

pertinence of risk around the globe We also stress the ubiquity of faith and the magical in various modern settings This book was originally published as a special issue of Health Risk Society

Modes of Uncertainty Limor Samimian-Darash, Paul Rabinow, 2015-07-15 Modes of Uncertainty offers groundbreaking ways of thinking about danger risk and uncertainty from an analytical and anthropological perspective Our world the contributors show is increasingly populated by forms practices and events whose uncertainty cannot be reduced to risk and thus it is vital to distinguish between the two Drawing the lines between them they argue that the study of uncertainty should not focus solely on the appearance of new risks and dangers which no doubt abound but also on how uncertainty itself should be defined and what the implications might be for policy and government Organizing contributions from various anthropological subfields including economics business security humanitarianism health and environment Limor Samimian Darash and Paul Rabinow offer new tools with which to consider uncertainty its management and the differing modes of subjectivity appropriate to it Taking up policies and experiences as objects of research and analysis the essays here seek a rigorous inquiry into a sound conceptualization of uncertainty in order to better confront contemporary problems Ultimately they open the way for a participatory anthropology that asks crucial questions about our contemporary state
