Science Industry And The Social Order In Post Revolutionary France Variorum Collected Studies:

Public Science and Public Policy in Victorian England Roy M. MacLeod, 2024-10-28 This book comprises nine essays selected from Roy MacLeod's work on the social history of Victorian science and is concerned with the analysis of science as a responsibility and opportunity for 19th century statecraft. It illuminates the origins of environmental regulation, the creation of scientific inspectorates, the reform of scientific institutions and the association of government with the patronage and support of fundamental research. Above all, it explores several of the ways in which British scientists became statesmen in disguise, negotiating interests and professional goals by association with the interests of the state as provider and agent of efficiency in education and in the application of research.

The Limits of Absolutism in ancien régime France Richard Bonney, 2024-10-28 This selection of articles is organized around three broad themes: the nature of the governing system in France, Absolutism, the political crisis of the mid 17th century, the Fronde and the development of royal finance. The author first considers the growth of the French state in its ideological and institutional aspects, then the opposition such developments provoked, much centred on the figure of Cardinal Mazarin. In the last section, particular attention is given to fiscal history, including a comparison of mid 18th century France with the other states of Europe. Professor Bonney would argue that the fiscal imperative, the increased requirements posed by the costs of war and the long term consequences of fiscal growth, may be seen as one of the decisive factors in the development of the modern state.

An Intellectual History of Science in the Renaissance Raffaele Pisano, 2025-09-09 This is the second of a two-part volume. Book II extends the historical scientific inquiry of the first part, volume Book I, by considering other specific case studies within cultural, fundamental, technological frameworks. An intellectual cultural history of science technology examines how human and their applied sciences' experiences have been expressed in and trained by ideas and technologies. The contributors explain ways in which the sciences allowed advanced modelling on the one hand and the development of new technological ideas on the other hand, including methods and theories, institutions, engineering devices, instrumentation and social implications, as well. Taking into account the excellence of the essays, the book covers several branches and disciplines in science technology, e.g. theoretical mathematics and the empirical work, machinery and mechanisms, stored information, transportation, inquiring methods in history and historiography of science technology. It describes the ways it differently accounted for variation in unlike contexts and consequently how its results remain still nowadays a debated question, as well as due to constraints preventing an extensive exploration of its remarkable historiography. The book gathers selected and double peer review contributions by historians of physics, mathematics, engineering, science, as new perceptions of the history of science during the Renaissance, ranging across several fields of science within its fundamental cultural technological history. The volume is an accessible avenue to understanding cultural ideas, technologies, by leading authorities who offer much needed historical insights into the field of and intellectual history of science technology. It provides an absorbing and revealing read for historians, philosophers.

and scientists alike The Earth Sciences in the Enlightenment Kenneth L. Taylor, 2024-10-28 This volume is concerned with the geological sciences in the 18th century with special emphasis on France and French scientists A first focus is on the pioneering geologist Nicolas Desmarest whose investigations in Auvergne and Italy among other places had important consequences in geological theory and practice Desmarest emerges as a figure of intriguing complexity and refined methodological convictions defying facile interpretation in terms of for instance a simple polarity between vulcanism and neptunism Widening his inquiry beyond Desmarest Professor Taylor also endeavors to recover key elements of the presuppositions and thought patterns of Enlightenment geologists and to discern how geological investigation worked during this formative period In the era that modern geological science was beginning to take form many of the participants are seen as struggling to define their scientific objectives and procedures by drawing from the competing frameworks of physique or natural philosophy descriptive natural history and antiquarian scholarship or developmental history One of the articles *Reflections on Natural Laws in Eighteenth Century Geology* appears here for the first time in English *Lazare and Sadi Carnot* Charles Coulston Gillispie, Raffaele Pisano, 2014-02-03 Lazare Carnot was the unique example in the history of science of someone who inadvertently owed the scientific recognition he eventually achieved to earlier political prominence He and his son Sadi produced work that derived from their training as engineering and went largely unnoticed by physicists for a generation or more even though their respective work introduced concepts that proved fundamental when taken up later by other hands There was moreover a filial as well as substantive relation between the work of father and son Sadi applied to the functioning of heat engines the analysis that his father had developed in his study of the operation of ordinary machines Specifically Sadi's idea of a reversible process originated in the use his father made of geometric motions in the analysis of machines in general This unique book shows how the two Carnots influenced each other in their work in the fields of mechanics and thermodynamics and how future generations of scientists have further benefited from their work *Homage to Evangelista Torricelli's Opera Geometrica 1644-2024* Raffaele Pisano, Jean Dhombres, Patricia Radelet de Grave, Paolo Bussotti, 2024-03-22 Evangelista Torricelli exemplifies the use the moderns made of the ancients mathematical methods Celebrating Evangelista Torricelli's monumental Opera geometrica this book marks 380 years since its publication 1644 2024 This homage to Torricelli introduces the magnificent major work in Mechanics and Mathematics of a brilliant Archimedean and Galilean scientist to modern readers Opera geometrica deals with Motion Mechanics and Geometry Infinitesimals In quibus Archimedis doctrina Torricelli also presents his mechanical principle of equilibrium the foundation of the modern Principle of Virtual Work Static This outstanding source and research book spotlights the relevance and originality of Torricelli's Mechanics and is the first and most profound analysis of the Opera geometrica to date The historical study is achieved in extensive Introduction 5 Essays and an accurate Transcription of Opera geometrica with parallel side by side text including substantive explicative notes The book is an accessible avenue to understanding this work by leading authorities

who offer much needed insights into the relationship Physics Mathematics Mechanics and Fundamentals It appeals to historians epistemologists and scientists

Essay on Machines in General (1786) Raffaele Pisano, Jennifer Coopersmith, Murray Peake, 2021-02-01 This book offers insights relevant to modern history and epistemology of physics mathematics and indeed to all the sciences and engineering disciplines emerging of 19th century This research volume is the first of a set of three Springer books on Lazare Nicolas Marguerite Carnot's 1753-1823 remarkable work *Essay on Machines in General* *Essai sur les machines en g n ral* 1783-1786 The other two forthcoming volumes are *Principes fondamentaux de l'quilibre et du mouvement* 1803 and *G om trie de position* 1803 Lazare Carnot l'organisateur de la victoire in *Essai sur le machine en g n ral* 1786 assumed that the generalization of machines was a necessity for society and its economic development Subsequently his new coming science applied to machines attracted considerable interest for technician as well already in the 1780 s With no lack in rigour Carnot used geometric and trigonometric rather than algebraic arguments and usually went on to explain in words what the formulae contained His main physical mathematical concepts were the Geometric motion and Moment of activity concept of Work In particular he found the invariants of the transmission of motion by stating the principle of the moment of the quantity of motion and theorized the condition of the maximum efficiency of mechanical machines i e principle of continuity in the transmission of power While the core theme remains the theories and historical studies of the text the book contains an extensive Introduction and an accurate critical English Translation including the parallel text edition and substantive critical explicative notes of *Essai sur les machines en g n ral* 1786 The authors offer much needed insight into the relation between mechanics mathematics and engineering from a conceptual empirical and methodological and universalis point of view As a cutting edge writing by leading authorities on the history of physics and mathematics and epistemological aspects it appeals to historians epistemologist philosophers and scientists physicists mathematicians and applied sciences and technology

Spain and the Early Stuarts, 1585-1655 Albert J. Loomie, 2024-10-28 These studies focus on Spain's relations with England from the last stages of the Elizabethan war to the opening years of the Cromwellian regime Particular attention is given to the issue of religion and to the character and conduct of peacetime diplomacy and intelligence gathering In the first studies Professor Loomie deals with the policies of Philip II and preparations for the 1597 Armada The following articles examine Spanish attitudes towards the Stuart court and an unknown cultivation of the Independents during and after the Civil War

Studies in the Culture of Science in France and Britain Since the Enlightenment Maurice P. Crosland, 1995 A wide range of the author's previously published papers in the history of science is brought together in this book The articles which are mainly concerned with the 18th and 19th centuries are arranged in three sections science in the Enlightenment period science in an institutional context national and international science Some of the papers present a broad perspective others are of a more detailed nature drawing on the archives of the Paris Academy of Sciences and the Royal Society of London An original interpretation of the career of

Priestley is followed by a historiographical article on Lavoisier Papers with a more social approach include subjects such as the professionalisation of science peer review and science and war It is argued that science became a profession in France long before it did in Britain France also created an important precedent in the academic world in demanding publications of research as credentials Perspectives on Science ,1995 **Science, Culture, and Politics in Britain, 1750-1870** Jack Morrell,1997 From the late 1960s Jack Morrell s articles have stimulated a reorientation of the historiography of science He showed by example in the studies now gathered here how the social political economic and institutional aspects of science could be integrated with its content In his writings he assumed that science was a socially organised attempt to set and solve problems concerning the natural world and that historians should take cognisance of everything which affected that activity without down grading published knowledge its end product Specific topics in this volume include the institutions of British science especially universities laboratories and research schools the careers of the scientists and the impact of science in the north of England and especially in Scotland Archives Internationales D'histoire Des Sciences ,1998 **Science for All** William Hodson Brock,1996 19 studies in English four published for the first time here show how problematic it is to try to make science available to all Covering the history of Victorian science and education these studies shed light on science education and culture in modern Calculus and Analytical Mechanics in the Age of Enlightenment Craig G. Fraser,1997 A collection of 13 articles relating to developments in the history of 18th century exact science focusing on the writings of such figures as Jean d Alembert Leonhard Euler and Joseph Louis Lagrange The volume presents their work on the principles of calculus and the theory of motion and serves to clarify the conceptual foundation of analysis and mechanics in the century following Newton A detailed historical and critical study of conceptual change involving fundamental links between pure and applied mathematics is provided **Science in Ancient China** Nathan Sivin,1995 A collection of essays which presents insights into the Chinese scientific tradition and its interaction with Western science An introductory overview and biographical assessments of Shen Kua and Wang Hsi shan are included in the discussion **Science, Industry, and the Social Order in Post-revolutionary France** Robert Fox,1995 The essays in this volume focus on the public rather than the private face of science focusing on the interrelated activities of education popularization and the exploration of scientific and technical knowledge in industry They span the 18th and 19th centuries and up until 1914 **Thinking about Matter** John Hedley Brooke,1995 In these articles Professor Brooke has aimed to expose and explore the many layers of philosophical debate that accompanied the development of chemistry in the 100 years from Priestley to Kekul During this period the foundations of our modern science were laid Lavoisier s chemical revolution Dalton s atomic theory the electrochemical concepts of Berzelius transformed the science as did new ideas of valency and molecular structure But it was also a period of intense controversy when chemists called each other brigands and assassins Britain, France and International Commerce François Crouzet,1996 François Crouzet s work concentrates on the period of the second Hundred Years War between Britain

and France 1689 1815 In the present volume several chapters examine some of the economic aspects of this protracted struggle from the role of Huguenot refugees in financing war against Louis XIV to the impact of the Napoleonic wars in Britain and the blockade which Britain imposed on France International trade is also a major theme with studies on the rise of Bordeaux in the 18th century Anglo Brazilian trade and of ventures in Europe by Boston merchants at the peak of the French Revolution The final articles deal with the period after 1815 comparing business dynasties in Britain and France and surveying the debate on the slowness of French economic growth during the 19th century *Ferdinand Brunot und die nationalphilologische Tradition der Sprachgeschichtsschreibung in Frankreich* Jochen Hafner,2006 **Arches, Vaults, and Buttresses** Jacques Heyman,1996
