Search For A Scientist:

Science Education and Citizenship S. Terzian, 2012-12-28 Science fairs clubs and talent searches are familiar fixtures in American education yet little is known about why they began and grew in popularity In *Science Education and Citizenship* Sevan G Terzian traces the civic purposes of these extracurricular programs for youth over four decades in the early to mid twentieth century He argues that Americans mobilization for World War Two reoriented these educational activities from scientific literacy to national defense a shift that persisted in the ensuing atomic age and has left a lasting legacy in American science education

Scientific Discovery Pat Langley, 1987 Scientific discovery is often regarded as romantic and creative and hence unanalyzable whereas the everyday process of verifying discoveries is sober and more suited to analysis Yet this fascinating exploration of how scientific work proceeds argues that however sudden the moment of discovery may seem the discovery process can be described and modeled Using the methods and concepts of contemporary information processing psychology or cognitive science the authors develop a series of artificial intelligence programs that can simulate the human thought processes used to discover scientific laws The programs BACON DALTON GLAUBER and STAHL are all largely data driven that is when presented with series of chemical or physical measurements they search for uniformities and linking elements generating and checking hypotheses and creating new concepts as they go along *Scientific Discovery* examines the nature of scientific research and reviews the arguments for and against a normative theory of discovery describes the evolution of the BACON programs which discover quantitative empirical laws and invent new concepts presents programs that discover laws in qualitative and quantitative data and ties the results together suggesting how a combined and extended program might find research problems invent new instruments and invent appropriate problem representations Numerous prominent historical examples of discoveries from physics and chemistry are used as tests for the programs and anchor the discussion concretely in the history of science
