Understanding Global Climate Change Arthur P Cracknell, Costas A Varotsos, 2021-07-27 Climate change a familiar term today is far more than just global warming due to atmospheric greenhouse gases including CO₂ In order to understand the nature of climate change it is necessary to consider the whole climatic system its complexity and the ways in which natural and anthropogenic activities act and influence that system and the environment Over the past 20 years since the first edition of *Understanding Global Climate Change* was published not only has the availability of climate related data and computer modelling changed but our perceptions of it and its impact have changed as well Using a combination of ground data satellite data and human impacts this second edition discusses the state of climate research today on a global scale and establishes a background for future discussions on climate change This book is an essential reference text relevant to any and all who study climate and climate change Features Provides a thought provoking and original approach to the science of climate Emphasises that there are many factors contributing to the causation of climate change Clarifies that while anthropogenic generation of carbon dioxide is important it is only one of several human activities contributing to climate change Considers climate change responses needed to be undertaken by politicians and society at national and global levels Totally revised and updated with state of the art satellite data and climate models currently in operation around the globe

Oceanography Arnold L. Gordon, F. W. G. Baker, 2013-10-22 *Annals of the International Geophysical Year Volume 46* Oceanography covers the program of oceanographic studies conducted during the International Geophysical Year IGY The program includes long wave and sea level recording deep water circulation polar front survey and multipleship current measurement This book is composed of six chapters and begins with the objective and aims of the oceanographic program and the national contributions to this program The succeeding chapters discuss the problem in delineating sea level cycle and the results of the North Atlantic Polar Front Survey in the IGY These topics are followed by a survey of the results from many oceanographical expeditions Particularly good results were obtained during the IGY period by the use of special large scale precision automatic recorders of the phototelegraph station type The last chapter describes the artificial radioactivity in the oceans consisting mainly of fission products of U²³⁵ Pu²³⁹ and U²³⁸ from reactors and nuclear explosion devices This book is of value to geophysicists and marine scientists and researchers
