contains a proven mix of news nature sports history fiction science comics and Scouting *The biology of hypogean fishes*
Aldemaro Romero,2013-06-29 Hypogean cave artesian fishes have fascinated researchers even before they were described in
the scientific literature in 1842 Since then a number of scientists have used them to justify their own evolutionary ideas from
neo Lamarckism to neo Darwinism from neutral evolution to selectionist approaches Research in recent years has shown that
these fishes are much more complex in their adaptations to the subterranean environment than previously believed there are
those with features expected from living in total darkness complete blindness and depigmentation and poor in nutrients
extremely low metabolic rates others differ very little if any from their epigeal surface ancestors in their morphology and
physiology but not so in their behavior Some of them even live in nutrient rich environments Actually one of the most
overlooked facets of these animals is that there are more species of hypogean fishes without troglomorphisms blindness
depigmentation than with troglomorphic ones The study of these apparently unadapted fishes is providing new insights into
our understanding of the evolution of phenotypic characters founding effect behavioral and physiological adaptations The 86
species of troglomorphic fishes described so far belong to 18 different families many of which would hardly fit the notion that
they were preadapted to conquer the underground environment Further many troglomorphic species show very little
genotypic differentiation when compared with their putative ancestors indicating that massive phenotype changes can be
achieved via little genetic reorganization a reorganization that mostly affects regulatory genes These and many other topics
are discussed in this volume containing 29 papers written by 41 authors from 9 countries Hopefully this volume will convince
many other researchers that hypogean fishes represent a unique opportunity to study a concept in evolutionary biology that
is only superficially understood convergent evolution
