Maithel, 2018-10-01 The incidence of primary and metastatic liver tumors is rising and the therapeutic armamentarium for these tumors is expanding at a rapid pace Surgery remains the primary treatment modality for these tumors With improvements in our perioperative

management and operative techniques a larger proportion of patients are able to undergo potentially curative liver surgery. In addition, indications and criteria for liver transplantation for both primary and metastatic liver tumors are constantly expanding. Unfortunately, many patients are not amenable to surgical resection or liver transplantation and therefore alternative liver directed therapies are routinely being implemented as part of complex multidisciplinary treatment models. However, these models are continually evolving as these regional therapeutic options continue to expand. New embolization agents and techniques as well as improvements in radiation delivery are all evolving in the background of improvement in systemic and targeted therapy options for these tumors. This book provides a comprehensive state of the art review of the current state of liver directed therapy for malignant liver tumors. The book will serve as a valuable resource for not only surgeons and clinicians but for researchers with an interest in malignant liver tumors. The book focuses on the therapeutic approach to primary and metastatic tumors providing an up to date review on surgical liver anatomy and new imaging techniques as well as patient selection and technical consideration for resection and transplantation. In addition, the book provides new insight into novel and evolving therapies in the areas of transarterial therapy such as i bland embolization ii chemoembolization and iii radioembolization as well as new radiation techniques including SBRT and proton therapy. Furthermore, the expanding role of hepatic artery infusion therapy in primary malignant tumors is highlighted. Finally, integration of all these regional therapy options with upcoming and evolving systemic and targeted therapy regimens are integrated and discussed. This book will serve as a very useful resource for clinicians and researchers managing and treating patients with these challenging malignancies. It provides a concise yet comprehensive summary of the current status of the field that will help guide patient management and stimulate investigative efforts. All chapters are written by experts in their fields and include the most up to date scientific and clinical information.

Malignant Liver Tumours: Basic Concepts and Clinical Management F. Berr, J. Bruix, J. Hauss, Ch. Wittekind, J. Wands, 2002-11-30

Hepatocellular carcinoma (HCC) and cholangiocarcinoma (CC) both increasing in incidence have become a major topic of basic and clinical research as well as clinical practice in hepatology. Experts in the field update the current concepts on the carcinogenesis of HCC and CC such as genetic alterations in the pathways of cell cycle and apoptosis regulation, the hypothesis of dedifferentiation of hepatocytes to the malignant phenotype vs that of activation of hepatic progenitor cells incapable of maturation/maturation arrest hypothesis. In spite of an increasing number of genetic alterations described in human HCC as well as cell regulatory pathways tested in experimental HCC models, the key hits causing progression of the cell cycle in imbalance with apoptosis, tissue invasive growth and metastatic potential of cell clones still remain elusive. Very powerful genomic and proteomic techniques are promising insights into the carcinogenesis of liver malignancies that will allow more efficient therapeutic strategies. The current concepts on risk profiling, surveillance of risk groups and therapeutic strategies are evidence based for HCC and less detailed for CC. Surveillance of risk groups improves detection of liver tumours in curable stages. Best

strategies for curative treatment of HCC use neoadjuvant antitumour therapies before liver transplantation and a role is emerging for living donor related liver transplantation New palliative therapies for HCC are in the experimental stage with biological response modifiers including angiogenesis inhibitors and entering phase II clinical trials with the alpha fetoprotein derived vaccines

Tumors of the Liver G. T. Pack,A. H. Islami,2012-12-06 The surgical resection of a major portion of the liver for cancer of this viscus has long been neglected Although the first successful resection of a primary malignant tumor of the liver was performed by LUCKE in 1891 this pioneer effort failed to stimulate interest in the operative removal of hepatic neoplasms Earlier surgeons were intimidated by the concept of the liver as a huge vascular sponge possessed of three intricate circulatory systems To the fear of uncontrollable hemorrhage was added the supposed hazard of hepatic insufficiency following the removal of a large portion of an organ with so many vital functions Last but not least was the difficulty in surgical exposure Only in recent years has the sporadic interest of surgeons been changed to a growing concern about the possibilities of extirpation of hepatic tumors by the performance of major hepatic lobectomies Four factors have contributed to this 1 the dissemination of more accurate information about the surgical anatomy of the intrinsic and extrinsic hepatic circulatory systems which has acquainted surgeons with the principles and techniques of hemostasis essential for successful operative intervention on the liver 2 increased knowledge of the functions and regenerative capacity of the liver 3 greater diagnostic skill aided by modern laboratory procedures 4 improved surgical exposure of the liver by the use of laparothoracotomy incisions Primary liver cancer varies widely in incidence in different parts of the world **Liver Tumors**

Helen Reeves,Derek Manas,Rajiv Lochan,2013-04-10 The prognosis for individuals with liver cancer is frequently poor Cancers include those which have metastasized to the liver from elsewhere reflecting advanced stage disease where cure is rarely possible Similarly primary liver cancer frequently complicates chronic liver disease which further limits therapeutic options Despite these dismal facts there are signs that change is imminent Not only have imaging modalities and surgical techniques improved but preventive strategies and medical therapies show promise The topic of liver tumors is comprehensively reviewed in this book with a focus on recent developments relevant to both researchers and clinicians
