 animals and plants including fifty four species of amphibians and reptiles The dispersal and biology of the Michigan
 herpetofauna amphibians and reptiles is even more unique because Michigan consists of two peninsulas that project into
 large freshwater seas and also because it was completely covered by a massive ice sheet a relatively short time ago In The

 amphibians and reptiles in detail and with many helpful illustrations making this the only volume of its kind available Holman

Drinker Cope, 1875 The present contribution to North American Herpetology is a prodromus of a general work on that subject undertaken some years ago at the request of the Secretary of the Smithsonian Institution The material which has been accumulating in the museum of that Institution has offered great advantages for the investigation of the questions of anatomical structure variations of specific characters and geographical distribution It is believed that these subjects are much elucidated by the study of the Batrachia and Reptilia since these animals are especially susceptible to physical influences also they are unable like birds and generally not disposed as are mammals to make extended migrations their habitats express nearly the simplest relations of life to its surroundings Page 3 **Snakes of the Eastern United States**
