North London Railway A Pictorial Record:

North London Railway National Railway Museum,1979 **North London Railway** ,2008 The World's First Railway System Mark Casson,2009-09-10 This is the first history of the British railway system written from a modern economic perspective It uses counterfactual analysis to construct an alternative network to represent the most efficient alternative rail network that could have been constructed given what was known at the time the first time this has been done

William Adams: His Life and Locomotives John Woodhams,2023-11-23 William Adams 1823 1904 is probably best known from his locomotive designs for the London South Western Railway The years at Nine Elms were the culmination of career which began formally in marine engineering including a period at sea with the Royal Sardinian Navy encompassed civil engineering and surveying before joining the North London Railway as locomotive carriage and wagon superintendent He has been described as the father of the suburban train an inventive engineer who pioneered the use of continuous train brakes developed well designed free steaming locomotive boilers for services requiring rapid acceleration and frequent stops and his invention of a bogie with controlled side play revolutionized future locomotive design His next move was to the Great Eastern Railway where his designs met with mixed success before moving south of the Thames to Nine Elms Here over five hundred locomotives were built to his designs with his later express classes regarded by many as his greatest achievement Adams also proved himself a very capable designer in developing locomotive and carriage works at all three railways improving efficiency and reducing costs This book tells the story of a genial man with a love of music who was undoubtedly one of the finest late Victorian locomotive engineers *The East Coast Main Line 1939-1959 (Volume 2)* Peter Tuffrey,B. W.

L. Brooksbank,2022-07-02 The first detailed study of this huge mainline through its operational history Features extended commentaries from the authors rich in detail Superbly illustrated with black and white photographs many never seen before In this second and final volume the whole of the East Coast Main Line between King s Cross and Edinburgh Waverley stations is examined closely with a particular emphasis on the ways and structures the line stations connections yards and other physical features Interposed are accounts of the traffic at the principal stations including connecting and branch line services with observations on changes over the period 1939 to 1959 Some emphasis is placed on freight traffic on account of its importance and perhaps its relative unfamiliarity to the reader The lines stations and many other elements are described as they were in August 1939 but as some plans on which they are based are dated before the late 1930s there may be marginal differences from the precise layout in 1939 **Bibliography of Printed Works on London History to 1939**

Heather Creaton,Tony Trowles,1994 The history of London is so important in national and indeed international terms it seems extraordinary that this is the first general bibliography of the subject to appear It contains over 22 000 selected references to books and articles on the history of London from the Dark Ages to the beginning of the Second World War The whole of the former GLC area plus the City is covered Arrangement is by subject and there is a substantial analytical index

Material for the bibliography was collected from specialist libraries all over London and beyond It is a starting point for any enquiry about London s development over the centuries whether from the academic historian the amateur or the general enquirer A supplement is planned to cover new material on the period **Conserving the Railway Heritage** Peter

Burman, Michael Stratton, 2014-03-05 Great Britain not only invented the main line railway but has also led the way in its preservation not just locomotives and carriages but also the buildings and structures that bear witness to the confidence of railway developers architects and engineers This book defines the nature of the railway heritage from signalboxes viaducts tunnels and locomotive depots and then discusses priorities and the best practice for its conservation The subject is a strongly topical one due to current concern over privatization the effects of planned high speed rail links and lively debates concerning the role of the enthusiast in railway preservation **The British Library General Catalogue of Printed**

Books 1976 to 1982 British Library, 1983 **The Railway Goods Shed and Warehouse in England** John

Minnis, 2016-09-15 Although goods traffic accounted in many cases for a higher proportion of railway companies revenue than passengers the buildings associated with it have received very little attention in comparison to their passenger counterparts They once played as important a role in distribution as the big sheds near motorway junctions do today The book shows how the basic design of goods sheds evolved early in the history of railways and how the form of goods sheds reflected the function they performed Although goods sheds largely functioned in the same way there was considerable scope for variety of architectural expression in their external design The book brings out how they varied considerably in size from small timber huts to the massive warehouses seen in major cities It also looks at how many railway companies developed standard designs for these buildings towards the end of the 19th century and at how traditional materials such as timber brick and stone gave way to steel and concrete in the 20th This building type is subject to a high level of threat with development pressure in urban and suburban areas for both car parking and housing having already accounted for the demise of many of these buildings Despite this some 600 have been identified as still extant and the book will for the first time provide a comprehensive gazetteer of the surviving examples *Railway News, Finance and Joint-stock Companies' Journal*, 1897

The Railway Magazine, 1903 **The Early History of Railway Tunnels** Hubert Pragnell, 2024-08-30

To the early railway traveller the prospect of travelling to places in hours rather than days hitherto was an inviting prospect however a journey was not without its fears as well as excitement To some the prospect of travelling through a tunnel without carriage lighting with smoke permeating the compartment and the confined noise was a horror of the new age What might happen if we broke down or crashed into another train in the darkness To others it was exciting with the light from the footplate flickering against the tunnel walls or spotting the occasional glimpses of light from a ventilation shaft To the directors of early railway companies planning a route was governed by expense and the most direct way Avoiding hills could add miles but tunnelling through them could involve vast expense as the Great Western Railway found at Box and the London

and Birmingham at Kilsby Creating a cutting as an alternative was also costly not only in labour and time but also in compensation for landowners who opposed railways on visual and social grounds having seen their land divided by canals Construction involved millions of bricks or blocks of stone for sufficiently thick walls to withstand collapse However the entrance barely seen from the carriage window might be an impressive Italianate arch as at Primrose Hill or a castellated portal worthy of the Middle Ages as at Bramhope This book sets out to tell the story of tunnelling in Britain up to about 1870 when it was a question of burrowing through earth and rock with spade and explosive powder with the constant danger of collapse or flooding leading to injury and death It uses contemporary accounts from the dangers of railway travel by Dickens to the excitement of being drawn through the Liverpool Wapping Tunnel by the young composer Mendelssohn It includes descriptions from early railway company guide books newspapers and diaries It also includes numerous photographs and colored architectural elevations from railway archives

A Bibliography of British Railway History, 1988 The Publishers' Circular and Booksellers' Record of British and Foreign Literature, 1904 Publishers' Circular and Booksellers' Record of British and Foreign Literature, 1904 **Lists and Indexes from the Public Record Office** List & Index Society, 1991

Building the Death Railway Robert Sherman La Forte, Ronald E. Marcello, 1993 Generosity amid the greatest cruelty Building the Death Railway gives the American perspective on events that shocked the world **LNER** Paul Atterbury, 2018-05-31 The London and North Eastern Railway or LNER as it was familiarly known was one of the Big Four companies that took control of Britain's railway network following the Grouping in 1923 This network represented a challenging mixture of mainline and rural passenger routes suburban services and freight and industrial lines across the east coast of England and Scotland Despite this challenge the LNER became famous for its style speed and efficiency with record breaking high speed routes capturing the public's imagination supported by iconic locomotives such as the Flying Scotsman and Mallard Full of beautiful photographs this is a perfect introduction to one of Britain's best loved railway operators during the Age of Steam **The Great Eastern Railway - From the Grouping to the Elizabeth Line 1923-2023** Charles

Phillips, 2025-03-06 Explores the transformation of the Great Eastern Section from a backwater to a modernized railway hub from 1923 to 2023 This book is the sequel to the author's two previous volumes on the history of the Great Eastern covering the Early Years from 1811 to 1862 and the Late 19th Century and early 20th Century from 1862 to 1924 This book covers the years 1923 to 2023 describes how the Great Eastern Section of the London and North Eastern Railway was transformed from being something of a backwater during the inter war years to being very much at the forefront of modernisation under British Railways Within the book will be found how the Great Eastern Section coped with the threat of road competition during the inter war years its involvement in the Second World War and how under British Railways it came to be seen the

epitome of modernisation beginning with the arrival of the Britannia Class locomotives in 1951 and culminating the complete elimination of steam power in the East of England at the end of 1963 The book describes the impact of the Beeching Report on the former Great Eastern It chronicles the progress of the Section s through the electrification of its two main lines and the construction and opening of the Elizabeth Line Preservation is also mentioned as are possible future developments It is book for anyone who is interested in the history of the railways of the East of England railways in general and the history of the East of England
