North Sea Oil And Environmental Planning The Uk Experience:

The European Energy Challenge George Walter Hoffman, Leslie Dienes, 1985 By examining all of Europe in a single study an eminent geographer and expert on European development makes in this volume a unique contribution to the understanding of the changing energy relations of the European countries east and west The book examines the problem of establishing a reliable energy supply base in western Europe through structural changes and alternate and substitute energy sources The volume also evaluates western European security problems arising from present and future reliance on Soviet energy and relates this to North Sea supplies of gas and oil indigenous and import supplies and nuclear power generation

Onshore Impacts of Offshore Oil W.J. Cairns, P.M. Rogers, 2003-09-02 This collection of chapters by different authors focuses on the North Sea coastal lands It looks at environmental factors strategy and development planning and community issues and hazards and control It ends by summarising UK and Norwegian viewpoints

Planning for a Sustainable Environment Andrew Blowers, 2013-12-16 This study explains how confronting ever greater environmental pressures we can plan for and achieve a sustainable environment The book focuses on urban development as population and resources and often the most severe environmental problems are concentrated in cities It looks at the nature of environmental planning and at the main areas where changes have to be made in energy policy waste disposal and pollution control construction transport and infrastructure The book concludes with chapters on planning a sustainable city and on how to bring the necessary changes and institutional arrangements about

Marine Mineral Resources Fillmore C. F. Earney, 2012-11-12 During the past century scientists world statesmen and international entrepreneurs have become increasingly aware of the potential of the oceans as a source of minerals This book provides an authoritative picture of the current state of marine mineral extraction A major work of reference it will be essential reading for both those engaged in maritime studies and for professional organisations involved in the extraction of underwater minerals

Social and Environmental Impacts in the North: Methods in Evaluation of Socio-Economic and Environmental Consequences of Mining and Energy Production in the Arctic and Sub-Arctic Rasmus Ole Rasmussen, Natalia E. Koroleva, 2012-12-06 Future development in the Arctic and Subarctic region requires careful attention to the possible consequences of the development activities themselves in relation to their environmental socioeconomic and cultural impacts A more thorough understanding of the impact of future activities however demands the dissemination and confrontation of results from different regions and different scientific traditions This requires scientific cooperation not only across disciplines but across border Primarily it requires both consensus and innovations in regard to methods This book confronts such differences in approaches and methods in relation to the analysis of socioeconomic and environmental consequences of large scale mineral and energy development activities in the Arctic and Subarctic establishing the common ground upon which future research activities can be based

Planning Major Infrastructure Tim Marshall, 2013 This book analyses the planning and policy world of major

infrastructure as it is moving now in Europe and the UK Have some countries managed to generate genuine consensus on how the large changes are progressed What can we learn from the different ways countries manage these challenges to inform better spatial planning and more intelligent political steering Case studies of the key features of policy and planning approaches in France Germany the Netherlands Spain and the UK are at the core of Planning Major Infrastructure This includes the different regimes introduced in England and Wales and Scotland brought in by reforms since 2006 High speed rail renewable energy deployment water management waste treatment all raise critical planning issues The case studies connect to the big issues of principle which haunt this field of public policy how can democratic legitimacy be secured How can ecological and economic transitions be managed What is the appropriate role of the national government in each of these areas as against other levels What part has the EU played and should it be involved in the future These are some of the central themes raised in this innovating exploration of this currently high profile field

North Sea Oil and Environmental Planning Ian R. Manners, 1982

UK deepwater drilling - implications of the Gulf of Mexico oil spill Great Britain: Parliament: House of Commons: Energy and Climate Change Committee, 2011-01-06

On 20 April 2010 a blowout of BP's Macondo well in the Gulf of Mexico led to the deaths of 11 workers on Transocean's Deepwater Horizon drilling rig and the release of an estimated 4.9 million barrels of oil The European Commission called for a moratorium but the UK government decided its regulatory controls were fit for purpose However a full review of the oil and gas environmental regulatory regime would be undertaken The Committee believes that the UK has high regulatory standards as exemplified by the Safety Case regime that was set up in response to the 1988 Piper Alpha tragedy in 1988 The blowout in the Gulf of Mexico could have been prevented if the last line of defence the blind shear ram on the blowout preventer had activated and crushed the drill pipe Given the importance of this equipment the committee recommends prescribing specifically that blowout preventers should have two blind shear rams and that simple potential failures mustn't be left unchecked The Committee also recommends that the Bly report conclusions BP's internal investigation be considered alongside observations of other companies involved They believe that should an oil spill resulting from drilling activities occur in the UK there needs to be an absolute clarity as to the identity of the responsible party and that liability legislation needs to ensure prompt compensation They conclude that any calls for increased oversight of the UK offshore industry should be rejected in favour of multilateral approaches to regulation and oil spill response

evaporate In addition gas can be released from

operations through controlled process vents for safety protection. Further safety devices such as flares are used to burn excess hydrocarbons in the industry but can allow a small proportion of hydrocarbon into the atmosphere without being burnt. Industry contains and controls these emissions wherever possible to minimize any loss of hydrocarbon. Hydrocarbon vapours often described as volatile organic compounds or VOCs are potentially harmful air pollutants which can result in local health impacts as well as local or regional contributions to the formation of low level ozone which in turn may also impact human health. Controlling hydrocarbon loss helps prevent impact on air quality and is also economically beneficial. 4 A Ahnell and H O Leary. In 2004 BP emitted 245 kilo tonnes of non methane hydrocarbons to air a decrease of 24 kilo tonnes 9% compared with 2003. The largest proportion of these emissions came from the exploration and production businesses 44% followed by refining and marketing 35%. Combining methane and non methane hydrocarbon totals provides a better idea of where most of the hydrocarbon emissions come from within the industry sectors. In BP's case the exploration and production activities account for 67% of the total volume of such hydrocarbons emitted to air in 2004. **Ahead of the Curve** K. Green, P.

Groenewegen, P.S. Hofman, 2012-12-06. The debate on sustainable production often ends in discussions on the feasibility of far reaching changes in relation to the competitiveness of companies. Industry itself and policy makers tend to back away from engaging in profound processes of industrial transformation. Examples of companies who have voluntarily moved beyond what is seen as reasonable and feasible can overcome this deadlock. This book collects a fine sample of companies who have taken up their responsibility in this respect. To quote the editors of this book: They are cases that might provide other firms and policy makers with ideas for innovative environmental responses that are outside the slowly rising trend of improvement that we are currently observing. In short the cases are of firms and ideas that are ahead of the curve. The editors and many of the authors of this volume are members of the Greening of Industry Network and have been debating with one another for years. Founded in 1991 the Greening of Industry Network comprises over 1500 individuals representing academia business public interest labor and government from more than 50 countries. Participants work together to build policies and strategies toward creating a sustainable future through many vehicles coordinating research efforts publications planning and participating in workshops public forums and conferences. To provide benefit to broader society the Network stimulates public dialogue and brings together academic researchers from many disciplines with other stakeholders who traditionally do not work together in coalitions. **Journal of Petroleum Technology**, 1997. **Offshore Energy Law** Ignacio Herrera

Anchustegui, Madeline Taylor, Eduardo G Pereira, Eddy Wifa, 2025-05-29. This book examines the regulatory environmental financial socio legal and safety aspects that shape offshore energy infrastructure projects and their operation. The marine environment holds vast resources to provide energy solutions for humankind. The sustainable development of such offshore energy resources is one of the most pressing challenges posed by the energy transition. Whereas offshore hydrocarbons have been explored and extracted for more than a century the offshore renewable industry is rapidly expanding with lawmakers

increasingly looking to the oceans for significant energy development Offshore spaces now amalgamate mature and emerging energy industries creating a pressing need to identify synergies and regulatory challenges However and despite the pivotal role offshore energy is to play in the future the interaction synergies and conflicts arising between these regulatory socio legal environmental and financial dimensions of offshore energy are often not discussed within the energy law scholarship This book aims to fill this evident gap in existing energy law research to distil critical legal lessons from traditional offshore energy sectors to encourage best practice regulation of offshore energy net zero industries Offshore Energy Law provides a functional analysis that covers the life cycle of offshore energy developments including renewable and hydrocarbons within the broader context of the energy crisis and energy transition debates Written and edited by leading global offshore energy experts the book brings together a global and sectoral comparative perspective to central offshore energy topics such as licensing socio legal challenges and opportunities safety and ecological governance and the use of marine maritime spatial planning Meeting UK Energy and Climate Needs Great Britain: Parliament: House of Commons: Science and Technology Committee,2006-02-09 Meeting UK energy and climate Needs The role of carbon capture and storage first report of session 2005 06 Vol 2 Oral and written Evidence Environmental Management Handbook, Second Edition – Six Volume Set Sven Erik Jorgensen,Brian D.
