Notch from Neurodevelopment to Neurodegeneration: Keeping the Fate A. Israel, B. de Strooper, F. Checler, Y. Christen, 2012-12-06 Can molecular mechanisms involved in neural development help us to understand prevent and perhaps reverse the course of brain ageing and neurodegenerative disorders Brain development and function require complex cellular and molecular processes controlled by a number of different signaling mechanisms One such signaling mechanism the Notch pathway has been recognized as an important player in the regulation of cell fate decisions during early neural development However the action of this evolutionary conserved and widely used cell cell interaction mechanism is not confined to the developing nervous system In addition recent studies have shown that elucidating the mechanism of Notch signaling and its role in the brain is important for our understanding of neurological disorders such as Alzheimer s disease and cerebral arteriopathy CADASIL

Two Faces of Evil: Cancer and Neurodegeneration Thomas Curran, Yves Christen, 2010-12-16 Homeostasis involves a delicate interplay between generative and degenerative processes to maintain a stable internal environment In biological systems equilibrium is established and controlled through a series of negative feedback mechanisms driven by a range of signal transduction processes Failures in these complex communication pathways result in instability leading to disease Cancer represents a state of imbalance caused by an excess of cell proliferation In contrast neurodegeneration is a consequence of excessive cell loss in the nervous system Both of these disorders exact profound tolls on humanity and they have been subject to a great deal of research designed to ameliorate this suffering For the most part the topics have been viewed as distinct and rarely do opportunities arise for transdisciplinary discussions among experts in both fields However cancer and neurodegeneration represent yin yang counterpoints in the regulation of cell growth and it is reasonable to hypothesize that key regulatory events mediated by oncogenes and tumor suppressor genes in cancer may also affect neurodegenerative processes

Intracellular Traffic and Neurodegenerative Disorders Peter H. St. George-Hyslop, William C. Mobley, 2009-02-03 Many adult onset neurodegenerative diseases arise from the accumulation of misfolded peptides This book examines the role sub cellular

trafficking pathways play in the pathological accumulation of these misfolded proteins and in attempts to clear them

Synaptic Plasticity and the Mechanism of Alzheimer's Disease Dennis J. Selkoe, Antoine Triller, 2008-01-08 A biochemical hypothesis that Alzheimer's disease AD is a progressive cerebral amyloidosis caused by the aggregation of the amyloid β protein Ab preceded and enabled the discovery of etiologies This volume serves as a record focused on bringing together investigators at the forefront of elucidating the structure and function of hippocampal synapses with investigators focused on understanding how early assemblies of Ab may compromise some of these synapses *Alzheimer: 100 Years and Beyond* Mathias Jucker, Konrad Beyreuther, Christian Haass, Roger M. Nitsch, 2006-11-22 Few medical or scientific addresses have so unmistakably made history as the presentation delivered by Alois Alzheimer on November 4 1906 in Tübingen The celebratory event Alzheimer 100 Years and Beyond organized on the initiation of the Alzheimer community in Germany and worldwide in collaboration with the Fondation Ipsen was the highlight of the Year of Alzheimer However beyond these few months of tributes the centennial offers a unique opportunity to assess both the progress achieved and the uncertainties remaining This volume a collection comprised mainly of articles by the invited speakers and also of a few other prominent researchers is meant to be a record of those events

Developmental Biology in Prokaryotes and Lower Eukaryotes Tomás González Villa,Trinidad de Miguel Bouzas,2021-07-31 Developmental biology is widely understood as processes which mainly concern embryonic animal development and differentiation of cells and tissue It is also often defined as the timeline for the evolutionary developmental biology of eukaryotic multicellular higher organisms i e plants and animals The development of prokaryotes and lower eukaryotes in contrary has been neglected for a long time which was the motivation for publishing this book This book highlights one of Darwin s most important findings Evolution is a creative but not a conscious process It also illustrates that this concept does not only apply to multicellular higher organisms but affects every form of life The reader shall find complex biochemical and genetic pathways of bacteria yeasts or protozoa comparable to those exhibited by plants or animals The molecular mechanisms of dramatic genome rearrangements recombination and horizontal gene transfer that are responsible for evolutionary adaptations are discussed Additionally the book covers bacteria of the genera Myxobacteriales and Caulobacterales which are able to develop tissue like cellular organization The morphogenesis of entomopathogenic fungi and the endosymbiont theory are also addressed The book is a useful introduction to the field for junior scientists interested in bacteriology protistology and fungal development It is also an interesting read for advanced

scientists giving them a broader view of the field beyond their area of specialization Transcription Regulation - Brain Development and Homeostasis - A Finely Tuned and Orchestrated Scenario in Physiology and Pathology, Volume II Estela Maris Muñoz,Veronica Martinez Cerdeño,2023-10-03 A finely tuned regulation of gene expression is essential for shaping the nervous system and for maintaining its homeostasis throughout life Disruptions in gene regulation can impact brain development and physiology in ways that contribute to diverse pathologies The master orchestrators of gene activity in the nucleus are transcription factors proteins that recognize and bind to specific DNA motifs in regulatory regions and drive changes in gene expression Transcription factors act with the help of other co factor proteins including components of the Mediator complex histone modifying enzymes chromatin modelers and DNA methylases In addition transcription factor activity in the nervous system can be modulated by extracellular signals including growth factors hormones neuropeptides and neurotransmitters that activate specific receptors and intracellular transduction pathways An in depth understanding of the mechanisms of transcription regulation is needed in order to better describe how each element from genes to cells defines and maintains identities and functionalities in the healthy and diseased brain This Research Topic is oriented to developing an integrative view about transcription regulation within the nervous system focusing on developmental and homeostatic processes dysregulation in functionality and expression levels and consequent associated pathologies such as neurodevelopmental disorders brain tumors and neurodegenerative diseases Transcription regulation investigations will specifically focus on transcription factors that belong to the bHLH e g NeuroD homeobox e g Islet Pax Rax and Lhx and CREB families and on their roles over over defined nervous system areas cerebral cortex thalamic and hypothalamic areas interacting with the developing brain **Interactions of the Nervous System with Bacteria** Elisa L. are new to the concept of the extensive utility of *Drosophila* as a model to study human disorders but will also be an important contribution to the scientific community with an insight into the paradigm shift in our understanding of neurodegenerative disorders. Completed with informative tables and communicative illustrations, this book will keep the readers glued and intrigued. We have comprehensively anthologized the lessons learnt on neurodegeneration from *Drosophila* and have thus provided an insight into the multidimensional aspects of pathogenicities of majority of the neurodegenerative disorders. **Neurodevelopment and Neurodegeneration**, 2011
