**International Baccalaureate Diploma Programme** Tim Pound,2006-05-02 Introducing a balanced look at the experience of implementing and teaching the increasingly respected qualification the International Baccalaureate this book is a rich resource for all teachers school leaders and managers involved with or considering the qualification Routledge Library Editions: Curriculum Various,2021-07-09 Reissuing works originally published between 1971 and 1994 this collection

includes books which offer a broad spectrum of views on curriculum both within individual schools and the wider issues around curriculum development reform and implementation Some cover the debate surrounding the establishment of the national curriculum in the UK while others are a more international in scope Many of these books go beyond theory to discuss practical issues of real curriculum changes at primary or secondary level The Set includes books on cross curricular topics such as citizenship and environment and also guidance careers life skills and pastoral care in schools A fantastic collection of education history with much still relevant today *Academic Success And Social Power* Richard Teese,2013-04-18 A most significant text that says something new about how student achievement is shaped Richard Teese cuts across much of the recent talk about reform and allows us to think about the issues afresh His findings will fascinate all Professor Simon Marginson Monash University This eye opening study of Australian secondary education looks beyond clichés about excellence to analyse the historically specific nature of the scholarly ideal against which successive generations of Australian students have been judged Drawing on a wealth of strikingly original research Richard Teese offers a penetrating analysis of Victorian secondary schooling in the half century after World War Two This was a era in which higher secondary schooling ceased to be the preserve of an elite and emerged as a system of mass education It was also a period marked by successive waves of reform in curriculum and assessment Yet at the end of it all Australians have been left with a sharply polarised system of schooling in which the most economically vulnerable populations of young people are also those most at risk of educational failure This book asks the hard questions Are our systems of secondary teaching and the expectations they place on students anachronistic in an age of mass education How far is the curriculum itself responsible for the manifest disparities in achievement between sectors and regions and between boys and girls What has been the universities role in the process of reform and counter reform And what have all these upheavals implied for the practice of teaching **Science Education** James F Donnelly,Edgar W Jenkins,2001-01-26 Who wants to change school science education and why What

mechanisms exist to effect change What implications do they have for teachers professionalism These are the principal questions explored in this book The authors focus on strategies for effecting change including decentralized and statutory mechanisms and the use of systems of assessment The authors question the effectiveness of centralized programmes in improving the quality of students science education They suggest that this arises from a failure to acknowledge the contribution that the science teaching profession must make to reform They argue that sustained and effective change embodying improvements in standards depends upon promoting the initiative

practical work in science education and authentic science what role experimentation plays in current educational practice
