**Boundary Value Problems** HOFFMANN,SPREKELS,2013-03-08 This monograph contains a collection of 16 papers that  
were presented at the conference Free Boundary Problems Numerical Treatment and Optimal Control held at the  
Mathematisches Forschungsinstitut Oberwolfach West Germany July 9 15 1989 It was the aim of the organizers of the  
meeting to bring together experts from different areas in the broad field of free boundary problems where a certain emphasis  
was given to the numerical treatment and optimal control of free boundary problems However during the conference also a  
number of papers leading to important new theoretical insights were presented The strong connection between theory and  
applications finds its reflection in this monograph which contains papers of high theoretical and numerical interest as well as  
applications to important practical problems Many of the contributions are concerned with phase transition phenomena a  
field which was of particular importance during the meeting topics like spinodal decomposition shape memory alloys crystal  
growth and flow through porous media are addressed Another field of major interest during the conference was fluid flow  
also this field is addressed in this volume The volume opens with a contribution by H W Alt and I Pawlow In their paper the  
problem of spinodal decomposition is treated in the non isothermal situation For the first time the existence of a weak  
solution to the corresponding system of evolution equations could be proved The results of some numerical experiments are  
also reported In the following paper M Bornert and I      *Subject Catalog, 1982* Library of Congress,1982      *Numerical*

**Numerical Integration IV** BRASS,HÄMMERLIN,1993-07-01 Algorithms for the numerical computation of definite  
integrals have been proposed for more than 300 years but practical considerations have led to problems of ever increasing  
complexity so that even with current computing speeds numerical integration may be a difficult task High dimension and  
complicated structure of the region of integration and singularities of the integrand are the main sources of difficulties
