Numerical Optimisation of Dynamic Systems Laurence Charles Ward Dixon, G. P. Szegö, 1980 **Numerical Optimisation of Dynamic Systems** Laurence Charles Ward Dixon, G. P. Szegö, 1980 **Control and Dynamic Systems V37: Advances in Industrial Systems** C.T. Leonides, 2012-12-02

Control and Dynamic Systems Volume 37 Advances in Industrial Systems provides an overview of the state of knowledge in industrial systems. This volume contains nine chapters and begins with a paper on the objective measures used to characterize the performance of computers which control critical processes. This is followed by separate chapters on the design of automotive power train control systems, control techniques in the pulp and paper industry, developments in production scheduling, research and practice in a general model-based failure detection and diagnosis methodology, and the application of model predictive control techniques to problems with several input and output variables. Subsequent chapters deal with techniques for dealing with the problem of providing a complete coherent and reliable data base from a collection of switch and breaker status data and measurements, systematic approaches to modifying a finite element model, and optimization techniques in industrial chemical systems. The contributions in this volume will provide a unique and significant reference source for practicing professionals as well as those involved with advancing the state of the art.

New Quantitative Techniques for Economic Analysis Giorgio P. Szegö, 2014-05-10

Economic Theory, Econometrics and Mathematical Economics: New Quantitative Techniques for Economic Analysis provides a critical appraisal of the results, the limits, and the developments of well-established quantitative techniques. This book presents a detailed analysis of the quantitative techniques for economic analysis. Organized into four parts encompassing 16 chapters, this book begins with an overview of the general questions concerning models and model making. This text then provides the main results and various interesting economic applications of some quantitative techniques that have not been widely used in the economic field. Other chapters consider the principle of optimality in dynamic programming, wherein the infinite sequence of consumption-saving decisions can be reduced to one decision. This book discusses as well the methods for online control and management of large-scale systems. The final chapter deals with special problems. This book is a valuable resource for economists, social scientists, epistemologists, economic historians, and research workers.

Introduction to the Theory of Nonlinear Optimization Johannes Jahn, 2020-07-02

This book serves as an introductory text to optimization theory in normed spaces and covers all areas of nonlinear optimization. It presents fundamentals with particular emphasis on the application to problems in the calculus of variations, approximation, and optimal control theory. The reader is expected to have a basic knowledge of linear functional analysis.

Introduction to Sensitivity and Stability Analysis in Nonlinear Programming Fiacco, 1983-11-02

Introduction to Sensitivity and Stability Analysis in Nonlinear Programming **Control Perspectives on Numerical Algorithms and Matrix Problems** Amit Bhaya, Eugenius Kaszkurewicz, 2006-01-01

Control Perspectives on Numerical Algorithms and Matrix Problems organizes the analysis and design of iterative numerical methods.

from a control perspective The authors discuss a variety of applications including iterative methods for linear and nonlinear systems of equations neural networks for linear and quadratic programming problems support vector machines integration and shooting methods for ordinary differential equations matrix preconditioning matrix stability and polynomial zero finding This book opens up a new field of interdisciplinary research that should lead to insights in the areas of both control and numerical analysis and shows that a wide range of applications can be approached from and benefit from a control perspective

Dynamics of Data Envelopment Analysis Jati Sengupta, 2013-11-11 Data envelopment analysis develops a set of nonparametric and semiparametric techniques for measuring economic efficiency among firms and nonprofit organizations Over the past decade this technique has found most widespread applications in public sector organizations However these applications have been

mostly static This monograph extends this static framework of efficiency analysis in several new directions These include but are not limited to the following 1 a dynamic view of the production and cost frontier where capital inputs are treated differently from the current inputs 2 a direct role of the technological progress and regress which is so often stressed in total factor productivity discussion in modern growth theory in economics 3 stochastic efficiency in a dynamic setting where reliability improvement competes with technical efficiency 4 flexible manufacturing systems where flexibility of the production process and the economies of scope play an important role in efficiency analysis and 5 the role of economic factors such as externalities and input interdependences Efficiency is viewed here in the framework of a general systems theory model Such a view is intended to broaden the scope of applications of this promising new technique of data envelopment analysis The monograph stresses the various applied aspects of the dynamic theory so that it can be empirically implemented in different situations As far as possible abstract mathematical treatments are avoided and emphasis placed on the statistical examples and empirical illustrations
