Quendler, 2004-09-30 Inhaltsangabe Abstract It has been documented that children from all socioeconomic backgrounds are at risk for poor nutrition and lack of physical activity PA On one hand many children from low income families are not getting enough to eat each day due to a lack of resources On the other hand children from middle and upper income levels consume enough food but their diets are high in fat sugar and sodium and they do not participate in PA As a result of this combination many children today face an increased risk for under nutrition obesity heart disease and other chronic diseases Finally educators and health professionals agree that poor diet eating habits and lack of PA also affect academic performance The fact that a hungry child cannot learn has been documented in numerous studies Indeed this research has found that even moderate under nutrition and an immense lack of PA can have lasting effects on children's ability to learn and school performance Undernourished and untrained children tend to attain lower scores on standardised tests are more likely to become sick miss school and to fall behind in class Also hungry children have low energy are more irritable and have
