Handbook of Literacy and Technology David Reinking, Michael C. McKenna, Linda D. Labbo, Ronald D. Kieffer, 1998-04 The major shift going on today in the technologies of reading and writing raises important questions about conventional conceptions of literacy and its role in education society and culture What are the important characteristics of electronic forms of reading and writing distinguishing them from printed forms To what extent and in what ways is literacy being transformed by new technologies This central question is addressed in this volume from diverse multidisciplinary perspectives The contributing authors focus on a guiding question in one of the following areas which correspond to the major sections of the book Transforming Texts What are the new differences between printed and electronic texts and what are the implications of new textual forms for defining literacy especially in regard to teaching and learning in schools Transforming Readers and Writers How do electronic reading and writing change conceptualizations of literacy development from childhood through adulthood Transforming Classrooms and Schools What are the effects of introducing new reading and writing technologies into schools and classrooms Transforming Instruction How can instruction be adapted in response to the changing literacy landscape and how can teachers and students exploit forms of reading and writing to enhance teaching and learning Transforming Society What are the broad societal implications of the increasing prevalence of electronic forms of reading and writing Transforming Literacy Research What are the questions that must be addressed as digital reading and writing become more common and what approaches to research will be most useful in

addressing those questions This volume is the result of an interactive process The contributors met as a group to discuss drafts of their chapters at a one day meeting convened and sponsored by the National Reading Research Center and had read each others chapters prior to this gathering That meeting was followed by a two day conference attended by approximately 180 researchers educators and policymakers who responded to an open invitation to present papers and to attend sessions focusing on the six major themes of the book Contributors then revised their chapters based on interactions with fellow contributors conference participants and volume editors Thus this work is more than just a compilation of the individual authors views Rather it represents a synthesis of a broad range of current thinking about how literacy is being and may be transformed by technology

Biomechanics Y.C. Fung,2013-04-17 The theory of blood circulation is the oldest and most advanced branch of biomechanics with roots extending back to Huangti and Aristotle and with contributions from Galileo Santori Descartes Borelli Harvey Euler Hales Poiseuille Helmholtz and many others It represents a major part of humanity s concept of itself This book presents selected topics of this great body of ideas from a historical perspective binding important experiments together with mathematical threads The objectives and scope of this book remain the same as in the first edition to present a treatment of circulatory biomechanics from the stand points of engineering physiology and medical science and to develop the subject through a sequence of problems and examples The name is changed from Biodynamics Circulation to Biomechanics Circulation to unify the book with its sister volumes Biomechanics Mechanical Properties of Living Tissues and Biomechanics Motion Flow Stress and Growth The major changes made in the new edition are the following When the first edition went to press in 1984 the question of residual stress in the heart was raised for the first time and the lung was the only organ analyzed on the basis of solid morphologic data and constitutive equations The detailed analysis of blood flow in the lung had been done but the physiological validation experiments had not yet been completed
