The Development of Timing Control and Temporal Organization in Coordinated Action J. Fagard, P.H. Wolff, 1991-09-30 This volume examines the development of timing in coordinated action from several different ontogenetic perspectives Some chapters emphasize the qualitative changes in manifest motor behavior during the early growth years and examine the relation between temporal characteristics of pre and perinatal movements and goal directed actions with qualitatively different rules of temporal organization Other contributors stress the developmentally invariant timing characteristics of species typical and perhaps genetically programmed motor patterns of nonhuman organisms Also examined is the molecular machinery that generates circumscribed motor patterns with stable temporal characteristics as well as the reversible influences of peripheral feedback on and the interactions among discrete pattern generators Despite their basic theoretical differences both formulations imply the same generic hypothesis that the temporal characteristics of manifest movement or action are controlled by central agencies acting on the peripheral skeletal muscular system in a hierarchic top down mode

Attentional Processing David LaBerge, 1995 LaBerge explores how we are able to restrict the input of extraneous and confusing information or prepare to process a future stimulus in order to take effective action As well as describing the pathways in the cortex presumed to be involved in attentional processing he examines the hypothesis that two subcortical structures the superior colliculus and the thalamus contain circuit mechanisms that embody an algorithm of attention In addition he takes us through various ways of posing the problem from an information processing description of how attention

works to a consideration of some of the cognitive and behavioral consequences of the brain's computations such as desiring, judging, imaging and remembering

Militarization and State Power in the Arab-Israeli Conflict Eligar Sadeh, 1997-08 A set of propositions and an accompanying theoretical framework that explains the cause-effect linkages between intrastate and interstate power realization that are characterized by militarization are developed. This model establishes the foundation for an explanation of how such power is used to deal with the state's Janus-faced security dilemma. To this end, the model provides the tools needed for such an inquiry from a conceptual and typological standpoint. The goal is to explain how the internal aspect of state power shapes the external one. It was determined that Israel and the primary Arab confrontation states provide important test cases based on the intense interplay prevalent between militarization processes and state power

The Role of the University in the Preparation of Teachers the late Robert Roth, 2005-08-04 Addresses a subject of common interest in developed countries: the apparently diminishing role of universities in the education of teachers. There is pressure to redesign teacher education: an on-going struggle between those who see the need to strengthen the knowledge base of teachers and those who favour learning on the job. There is a perceived need to define precisely what teachers need to know and be able to do, and at the same time there is relaxation of entry standards for students entering the profession in an attempt to relieve the chronic shortage of teachers. This situation is prevalent in the USA, in the UK, Europe and Australia. The struggle over who should control the preparation of teachers is the significant emerging issue in education and could change the whole structure of the teacher preparation

Models of Information Processing in the Basal Ganglia

James C. Houk, Joel L. Davis, David G. Beiser, 1995 This book brings together the biology and computational features of the basal ganglia and their related cortical areas along with select examples of how this knowledge can be integrated into neural network models Recent years have seen a remarkable expansion of knowledge about the anatomical organization of the part of the brain known as the basal ganglia the signal processing that occurs in these structures and the many relations both to molecular mechanisms and to cognitive functions This book brings together the biology and computational features of the basal ganglia and their related cortical areas along with select examples of how this knowledge can be integrated into neural network models Organized in four parts fundamentals motor functions and working memories reward mechanisms and cognitive and memory operations the chapters present a unique admixture of theory cognitive psychology anatomy and both cellular and systems level physiology written by experts in each of these areas The editors have provided commentaries as a helpful guide to each part Many new discoveries about the biology of the basal ganglia are summarized and their impact on the computational role of the forebrain in the planning and control of complex motor behaviors discussed The various findings point toward an unexpected role for the basal ganglia in the contextual analysis of the environment and in the adaptive use of this information for the planning and execution of intelligent behaviors Parallels are explored between these findings and new connectionist approaches to difficult control problems in robotics and engineering Contributors James L Adams P Apicella Michael Arbib Dana H Ballard Andrew G Barto J Brian Burns Christopher I Connolly Peter F Dominey Richard P Dum John Gabrieli M Garcia Munoz Patricia S Goldman Rakic Ann M Graybiel P M Groves Mary M Hayhoe J R Hollerman George Houghton James C Houk Stephen Jackson Minoru Kimura A B Kirillov Rolf Kotter J C Linder T Ljungberg M S Manley M E Martone J Mireniewicz C D Myre Jeff Pelz Nathalie Picard R Romo S F Sawyer E Scarnat Wolfram Schultz Peter L Strick Charles J Wilson Jeff Wickens Donald J Woodward S J Young
