**Western Diesel Hydraulic Locomotives in Preservation** Fred Kerr,2022-07-28 When British Railways initiated its Modernisation Plan in 1955 its Western Region elected to trial locomotive designs with hydraulic transmission whilst BR encouraged designs with electric transmission The Western Region felt that the lighter weight of 78 tons for a diesel hydraulic locomotive producing 2000 hp compared to an equivalent weight of 132 tons for a diesel electric locomotive producing 2000 hp would better meet BR s requirement for a modern locomotive BR s failure to follow up with its declared policy of having all freight vehicles fitted with brakes saw operators preferring the heavier diesel electric designs which proved more able to operate trains without through brakes at higher speed The greatest concern was with operating costs whereby the Western Region policy of replacing components at the depot then transferring them to Swindon for repair incurred heavy costs that were reflected in the maintenance cost per locomotive Given the smaller number of diesel hydraulic locomotives and the larger number of diesel electric locomotives it was little surprise that by the mid 1960s a cost comparison showed that the build and operation of diesel electric locomotives was increasingly cheaper over the long term Furthermore the increased availability of diesel electric locomotives released by a combination of factors provided an opportunity to replace the diesel hydraulic fleet which was withdrawn from service during the 1970s The preservation of redundant locomotives was slow but once it was confirmed by the preservation of Hymek Class 35 D7017 in 1975 that public appeals could quickly fund the preservation of withdrawn examples further public appeals followed In a short space of time 31 locomotives from a mixed fleet of 358 locomotives entered preservation to remind both enthusiasts and the public of a concept i e hydraulic transmission that had had much to offer but had been dismissed on questionable financial grounds

**BR Diesel Locomotives in Preservation** Fred Kerr,2017-10-30 When British Railways BR initiated its Modernization Plan in 1954 it had little experience of diesel locomotives thus initiated a Pilot Scheme to trial combinations of the three elements comprised within a locomotive the engine transmission and body The initial orders for 174 locomotives were placed in November 1955 but even before the first locomotive had been delivered changes in

Government policy led to bulk orders for most designs being trailed It was only in 1968 once steam traction had been removed from the network that BR was able to review the success or otherwise of its diesel fleet and decide which designs to withdraw from service The nascent preservation movement of the time was concerned to preserve steam locomotives whilst only buying diesel shunting locomotives for support roles on heritage lines and it wasn't until 1977 that any effort was made to preserve main line diesels Once it was confirmed that diesel locomotives had an appeal to enthusiasts further purchases were made that resulted in examples of most of the BR diesel classes being represented within the preservation movement Fred Kerr's book details those classes which are represented on heritage lines identifies where possible their location as of December 2016 shows many of them at work and shows what is involved in the restoration maintenance and operation of diesel locomotives by the volunteers whose efforts are vital but rarely acknowledged Some of the preserved locomotives were bought for possible use on the national network and this was facilitated by the Railways Bill 1993 A complementary album of preserved and heritage locomotives titled *Heritage Traction on the Main Line* details the locomotive classes whose representatives are still in regular use on the national network as at December 2016 and follows a similar format to this album

*An Introduction to Great Western Locomotive Development* Jim Champ, 2018-02-28 The first thought when contemplating a new study of the Great Western Railway locomotive fleet must surely be to ask what can there be left to say But there is no single source which gives a general introduction to the Great Western locomotive fleet There are monographs on individual classes an excellent multi volume detail study from the RCTS and superb collections of photographs but nothing that brings it all together This work is intended to provide that general introduction The volume begins with a series of short essays covering general trends in design development whilst the main body of the volume covers individual classes For each class there is a small table containing some principal dimensions and paragraphs of text covering an introduction renumbering key changes in the development of the class and information on withdrawal The volume concludes with appendices covering the development and types of standard boilers the various numbering schemes used by the GWR the arcane subject of locomotive diagrams and lot numbers and a short reference on the many lines the GWR engulfed The majority of illustrations are new profile drawings to a consistent format Described as sketches they are drawn to a consistent scale but do not claim to be scale drawings Much minor equipment has been omitted and the author has certainly not dared to include rivets Although most are based around GWR weight diagrams they are not simple traces of the original drawings Detail has been added from other sources components copied from different drawings and details have been checked against historical and modern photographs One must also bear in mind that steam locomotives were not mass produced Minor fittings frequently varied in position and changes were made over the locomotives lifetimes Nevertheless this collection of drawings provides a uniquely consistent view of the GWR locomotive fleet

in the United States is a fascinating one that spans over a century These railroads played a vital role in the development of the country transporting vast quantities of timber from the forests to the mills and markets The first logging railroads were built in the early 1800s and they quickly became an essential part of the logging industry By the late 1800s there were over 100 000 miles of logging railroads in the United States These railroads were used to transport logs from the forests to the mills where they were processed into lumber The logging railroads were a major factor in the development of the American economy They helped to open up new areas of the country to settlement and development They also played a vital role in the growth of the lumber industry which was one of the most important industries in the United States at the time The logging railroads were a dangerous place to work The work was hard and the pay was low Many loggers were injured or killed on the job However the loggers were a proud and independent group of men who were essential to the development of the United States The logging railroads began to decline in the early 1900s as the lumber industry began to move to the Pacific Northwest By the mid 1900s most of the logging railroads had been abandoned However a few logging railroads still operate today and they continue to play a vital role in the logging industry Timber by Rail Logging Railroads of the United States is the definitive history of these railroads This book tells the story of the men who built and operated the logging railroads and the vital role that these railroads played in the development of the United States If you like this book write a review
