Powell, 2015-06-05 This book addresses new avenues in child abuse prevention research that will expand our capacity to protect children These new avenues result from the emergence of new research methods made possible through technologic advances an understanding of the benefits of cross disciplinary research and learning and the entrance of many young scholars in the field The book explores what these avenues produce in terms of clarifying the complex problems that continue to limit our progress in addressing child maltreatment and promoting optimal child development Specifically the book showcases individual contributions from emerging scholars and show how these scholars use the frameworks and advanced methods to shape their work apply their findings and define their learning communities The book highlights the benefits of creating explicit and extended opportunities for researchers to network across disciplines and areas of interest The primary authors are young scholars from universities across the U S who have worked together as Fellows of the Doris Duke Fellowships for the Promotion of Child Well Being seeking innovations to prevent child abuse Through this program the Fellows have engaged in a robust self generating learning network designed to create the type of ongoing professional linkages and decision making style that fosters an interdisciplinary and team planning approach to research design and policy formation *Recruiter Journal* , 2004 **Federal Register** , 1979-05 Preventing Violence Against Women and Children Institute of Medicine, Board on Global Health, Forum on Global Violence Prevention, 2011-09-12 Violence against women and children is a serious public health concern with costs at multiple levels of society Although violence is a threat to everyone women and children are particularly susceptible to victimization because they often have fewer rights or lack appropriate means of

protection In some societies certain types of violence are deemed socially or legally acceptable thereby contributing further to the risk to women and children In the past decade research has documented the growing magnitude of such violence but gaps in the data still remain Victims of violence of any type fear stigmatization or societal condemnation and thus often hesitate to report crimes The issue is compounded by the fact that for women and children the perpetrators are often people they know and because some countries lack laws or regulations protecting victims Some of the data that have been collected suggest that rates of violence against women range from 15 to 71 percent in some countries and that rates of violence against children top 80 percent These data demonstrate that violence poses a high burden on global health and that violence against women and children is common and universal Preventing Violence Against Women and Children focuses on these elements of the cycle as they relate to interrupting this transmission of violence Intervention strategies include preventing violence before it starts as well as preventing recurrence preventing adverse effects such as trauma or the consequences of trauma and preventing the spread of violence to the next generation or social level Successful strategies consider the context of the violence such as family school community national or regional settings in order to determine the best programs

**Abuse and Violence Towards Young Children** Roy Evans, 2017-10-02 Levels of violence abuse and neglect in early childhood are reported internationally as having reached epidemic proportions The prevalence of all forms of violence to children has been difficult to establish particularly in low and middle income countries However even in countries with a high GDP the sexual abuse of children and young people by predatory adults may continue undetected for decades In parts of Africa young children are mutilated and killed for religious reasons Physical beatings that injure and break bones are still common in the Western world Pornography and sexual abuse involving young children is propagated worldwide through the internet The prevention of this violence will require substantial shifts in parental and public attitudes to children and the development and support of national systems of preventive legislation The last 20 years has seen the emergence of a body of material which interrogates early childhood violence and neglect in a wider range of global settings particularly those countries with a low GDP This book aims to highlight important features of national and international initiatives which are rooted in findings from systematic research The continued abuse and neglect of children has been attributed to social acceptance not understanding the importance of reporting abuse and the limitations of child welfare systems This book will be of interest to practitioners in health care education and social work services as well as field workers implementing programmes to address all forms of abuse at family community and national level This book was originally published as a special issue of Early Child Development and Care
