Preventing Violence In America:

Preventing Violence in America Robert L. Hampton, Pamela Jenkins, Thomas P. Gullotta, 1996 What can be done to address the problem of violence in society The contributors to this volume both scholars and practitioners examine this question by exploring the history of violence together with theoretical explanations The book discusses such issues as the disproportionate presence of violence within North American minority populations the concept of psychological resiliency how spirituality may serve as a protective factor and the role of television in promoting violence The contributors also address prevention and intervention strategies among gangs of young people and the implementation of special programmes in schools *Preventing Violence in America* ,1996

Preventing Violence James Gilligan, 2001-07-17. In this controversial and compassionate book the distinguished psychiatrist James Gilligan proposes a radically new way of thinking about violence and how to prevent it. Violence is most often addressed in moral and legal terms. How evil is this action and how much punishment does it deserve. Unfortunately this way of thinking the basis for our legal and political institutions does nothing to shed light on the causes of violence. Violent criminals have been Gilligan's teachers and he has been their student. Prisons are microcosms of the societies in which they exist and by examining them in detail we can learn about society as a whole. Gilligan suggests treating violence as a public health problem. He advocates initiating radical social and economic change to attack the root causes of violence focusing on those at increased risk of becoming violent and dealing with those who are already violent as if they were in quarantine rather than in constraint for their punishment and for society's revenge. The twentieth century was steeped in violence. If we attempt to understand the violence of individuals we may come to prevent the collective violence that threatens our future.

Raczynski,Ralph J. DiClemente,2013-11-11 The idea for this volume developed when we were co teaching our introductory mas ter s level course in the Department of Health Behavior at the UAB School of Public Health a core course for all masters of public health students in the school regardless of the department in which they enrolled or the focus of their studies Hence in the course we sought to provide both students in our department as well as those who might not ever again take a health behavior course with an overview that would both truly represent the field and substantially provide educational research and public health practice benefits This was and continues to be a challenge with the diversity of students specializing in fields that include not only health behavior but also bio statistics environmental health sciences epidemiology health care organization and policy international health and maternal and child health The course that we taught attempted to provide the students with an overview of some of the important health promotion and disease prevention theories methods and policy issues while re viewing applications of these theories and methods to promoting health and pre venting disease through a variety of channels for a variety of disease outcomes and among a variety of populations Since no one text provided this variety of readings we depended on readings and guest lectures **Global status report on preventing violence against children 2020** ,2020-08-31 **National Prevention Strategy: America's Plan for Better Health and Wellness** Regina M. Murray Thomas,2006-10-30 The problem of violence in schools has not gone away despite radical reductions in violent crimes throughout the country over the last decade Students continue to harrass haze and harm each other in a variety of ways disrupting classrooms and whole schools In the wake of the Columbine massacre many focused on

the worst kind of school violence deadly assaults with dangerous weapons But other forms of violence are more persistent common and just as destructive in many ways fighting sexual abuse carrying weapons to school vandalism and assorted other crimes that happen behind the closed doors of elementary middle and high schools across the country The consequences range from violent victimization and death to the disruption of learning and fear among student bodies and teaching staffs Here Thomas provides a foundation for understanding why the violence occurs preventing it from happening and treating both offenders and victims after it happens Using scores of case descriptions to illustrate the types of school violence and their treatment in recent years the author skillfully shows readers how the problem of violence and crime in schools is an insidious issue that cannot go untreated He offers both tested and proposed methods for dealing with a host of violence issues and a guide to planning treatment of the problem and its associated consequences He answers the questions What are prominent types of violence in American schools What conditions contribute to those types of violence What methods can be applied in an effort to reduce school violence Readers will come away from this book with a greater understanding of the scope of violence in America s schools and the myriad ways of addressing it

Preventing Violence Against Women and Children Institute of Medicine, Board on Global Health, Forum on Global Violence Prevention, 2011-09-12 Violence against women and children is a serious public health concern with costs at multiple levels of society Although violence is a threat to everyone women and children are particularly susceptible to victimization because they often have fewer rights or lack appropriate means of protection In some societies certain types of violence are deemed socially or legally acceptable thereby contributing further to the risk to women and children In the past decade research has documented the growing magnitude of such violence but gaps in the data still remain Victims of violence of any type fear stigmatization or societal condemnation and thus often hesitate to report crimes The issue is compounded by the fact that for women and children the perpetrators are often people they know and because some countries lack laws or regulations protecting victims Some of the data that have been collected suggest that rates of violence against women range from 15 to 71 percent in some countries and that rates of violence against children top 80 percent These data demonstrate that violence poses a high burden on global health and that violence against women and children is common and universal Preventing Violence Against Women and Children focuses on these elements of the cycle as they relate to interrupting this transmission of violence Intervention strategies include preventing violence before it starts as well as preventing recurrence preventing adverse effects such as trauma or the consequences of trauma and preventing the spread of violence to the next generation or social level Successful strategies consider the context of the violence such as family school community national or regional settings in order to determine the best programs
