**Coronary Heart Disease Prevention** Grace M. Lindsay, Allan Gaw, 1997 This is the first book aimed directly at nurses which gives them appropriate background information on Coronary Heart Disease CHD It is a succinct guide to CHD risk factors gives practical advice discussions of modern management strategies Prevention of Coronary Heart Disease: Diet, Lifestyle and Risk Factors in the Seven Countries Study Daan Kromhout, Alessandro Menotti, Henry Blackburn, 2012-12-06 In the 1940s I was struck by reports about many apparently healthy middle aged men who dropped dead instantly from heart attacks The causes of these sudden deaths were unknown I was interested to discover physio chemical characteristics of individuals with predictive value for the occurrence of these fatal heart attacks The discovery of preventive variables would point ways to prevent this disease In order to find relationships between mode of life and susceptibility to heart disease contrasting populations had to be studied Variety not a high degree of homogeneity in culture and habits must be sought After exploratory surveys in countries with supposed differences in dietary patterns lifestyle and heart disease rates in the early 1950s the Seven Countries Study took off in 1958 This study established relationships between risk factors and development of heart disease in middle aged men in health examined in countries with cultures we demonstrated to contrast in diet and lifestyle The results obtained in the Seven Countries Study from its inception till now are presented in this book entitled Prevention of coronary heart disease Diet lifestyle and risk factors in the Seven Countries Study Long ago I realized that our concern should not be restricted to the prevention of coronary heart disease but should be extended to all diseases and premature death Preventive Cardiology Jo Anne Micale Foody, 2007-11-03 Preventive cardiology is a fast moving field that places emphasis on the prevention and treatment of coronary disease Preventive Cardiology Insights Into the Prevention and Treatment of Cardiovascular Disease Second Edition is intended for clinical cardiologists internists primary care providers and allied health care professionals who wish to extend their knowledge and expertise in the rapidly expanding field of preventive cardiology It is the mission of this book to provide clinicians with the understanding and tools necessary to implement prevention in their daily practices Recent changes in the delivery of health care in the United States and abroad in conjunction with new scientific evidence supporting the role of preventive strategies in the maintenance of cardiovascular health have focused new attention and efforts on the field of cardiovascular disease prevention The field of cardiology is thus making a gradual transition from the technology driven intervention oriented perspective of the last several decades to a new preventive molecular based perspective As fresh evidence amasses that preventive measures produce a considerable decrease in the incidence of both primary and secondary cardiac events and mortality there is growing widespread acknowledgment that health care providers from all arenas must initiate preventive strategies in the management and care of their patients **Prevention of Coronary Heart Disease** Harumi Okuyama, 2007 This publication is organized in an exceptional way Each chapter introduces several completed clinical trials and provides the original conclusions and

discussions of the results The authors then contribute their own comments and interpretations of the findings challenging the prevailing belief that serum cholesterol is a mediator of disease which is increased by eating saturated fats and decreased by eating polyunsaturated fats They argue that upon closer scrutiny the diet recommendations based on the cholesterol hypothesis are essentially ineffective in reducing serum cholesterol levels in the long run Instead it is proposed that traditional cholesterol biomarkers are of different significance in short and long term interventions due to the feedback control mechanisms in the body Even more important the association of high serum cholesterol values with high coronary heart disease mortality is not consistent when different populations are compared This mortality rate may simply reflect the incidence and severity of familial hypercholesterolemia cases This agrees with the observation that higher serum cholesterol values associate with lower cancer and all cause mortalities in populations with a low relative proportion of this disorder Thus there seems to be no benefit of limiting dietary cholesterol intake or lowering serum cholesterol values below a certain limit Moreover evidence has been found that the health risk results from high intakes of calories aggravated by an unbalanced intake of omega6 omega3 polyunsaturated fats Based on the reviewed data new directions of lipid nutrition are recommended for the primary and secondary prevention of coronary heart disease cancer and all cause deaths which will likely revolutionize current dietary practice

Aspects of Preventive Measures in Coronary Artery Disease Ortrud Wendt, 1997-09-15 Inhaltsangabe Abstract An ounce of prevention is worth a pound of cure Rarely are there any objections to this old proverb Its significance is underscored by the fact that the Major causes of death today are the degenerative chronic diseases of civilization Abundant evidence has been accumulated that these diseases can often be prevented However the appeal of prevention lies not only in its ability to reduce suffering from disease but also in its assumed power to reduce the costs of health care At first sight it appears that promoting health and preventing disease would easily rehabilitate the health care system granting prevention a prominent spot on the health policy agenda For example in Germany prevention in the form of health check ups was introduced to the catalogue of services to be offered by health insurance companies in 1989 Yet concerns have been raised that prevention may not reduce but rather add to the costs of health care Especially in the case of prevention of chronic diseases death or sickness can only be postponed but never avoided Thus a careful analysis of all the effects of preventive measures is necessary to assess their full economic consequences Cardiovascular diseases primarily coronary artery disease and stroke account for the majority of deaths in industrialized countries In the United States these diseases kill nearly as many Americans as all other diseases combined and are also among the leading causes of disability The aggregate cost of coronary artery disease CAD in the United States is enormous costing the country between 50 and 100 billion dollars per year for medical treatment and lost wages Nonetheless over the past two decades the mortality from cardiovascular disease has declined dramatically 40 per cent for coronary artery disease Major contributions to this decline came from risk factor reduction and changes in lifestyles Moreover new technology improved pharmacology as well as better surgical techniques contributed to this decline Risk factor reduction and changes in lifestyle are preventive measures in coronary artery disease with a straightforward appeal Preventing the disease not only means avoiding the pain and suffering of the individual but also avoiding the risk of irreversible consequences and permanent damage In addition to these obvious benefits the costs of many preventive measures for example screening tests appear to be very small Nevertheless the
