Prey Density And Selection Against Oddity By Threespined Sticklebacks:

Prey Density and Selection Against Oddity by Three-spined Sticklebacks Osamu Ohguchi, 1981 *A Functional Biology of Sticklebacks* R. J. Wootton, 2023-11-15 Explore the fascinating world of the threespine stickleback in *A Functional Biology of Sticklebacks* a compelling synthesis of empirical research and theoretical ecology This groundbreaking book uses the stickleback a versatile teleost fish as a model organism to illuminate the intricate relationships between environmental factors life history strategies and evolutionary processes With their global distribution remarkable variability and adaptability to diverse habitats sticklebacks offer a unique opportunity to test ecological and evolutionary theories in real world contexts From their energy budgets to their reproductive strategies this book provides a holistic view of how these fish thrive in dynamic and often hostile environments Structured around a functional input output framework the book delves into the physiological morphological and behavioral mechanisms that enable sticklebacks to convert resources into reproductive success It highlights the pivotal role of natural selection and ecological interactions such as predation competition and parasitism in shaping their growth survival and reproduction With its seamless integration of theoretical models and empirical data *A Functional Biology of Sticklebacks* not only sheds light on this remarkable fish family but also sets a precedent for studying life history strategies across other species Perfect for students researchers and enthusiasts of ecology and evolutionary biology this book is a testament to the power of merging theory with biological reality This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1984 **Antipredator Defenses in Birds and Mammals** Timothy M. Caro, 2005-09 Tim Caro explores the many varied ways in which prey species have evolved defensive characteristics and behaviour to confuse outperform or outwit their predators from the camouflaged coat of the giraffe to the extraordinary way in which South American sealions ward off the attacks of killer whales *Behavioural Mechanisms of Food Selection* Roger N. Hughes, 2013-06-29 *Behavioural Mechanisms of Food Selection* examines animals belonging to diverse trophic groups from carnivores herbivores micro algal grazers to filter feeders and detritus feeders In the past Optimal Foraging Theory has been applied to all these groups but in different ways and in disciplines that rarely overlap Here concepts and developments hitherto scattered in the literature are drawn together This uniquely broad synthesis captures the state of the art in the study of diet selection and prescribes new objectives in theoretical development and research **The Behaviour of Teleost Fishes** Tony J. Pitcher, 2012-12-06 This book is about the behaviour of teleosts a well defined highly successful taxonomic group of vertebrate animals sharing a common body plan and forming the vast majority of living bony fishes There are well over 22000 living species of teleosts including nearly all those of importance in commercial fisheries and aquaculture Teleosts are represented in just about every

conceivable aquatic environment from temporary desert pools to the deep ocean from soda lakes to sub zero Antarctic waters Behaviour is the primary interface between these effective survival machines and their environment behavioural plasticity is one of the keys to their success The study of animal behaviour has undergone revolutionary changes in the past decade under the dual impact of behavioural ecology and sociobiology The modern body of theory provides quantitatively testable and experimentally accessible hypotheses Much current work in animal behaviour has concentrated on birds and mammals animals with ostensibly more complex structure physiology and behavioural capacity but there is a growing body of information about the behaviour of fishes There is now increasing awareness that the same ecological and evolutionary rules govern teleost fish and that their behaviour is not just a simplified version of that seen in birds and mammals The details of fish behaviour intimately reflect unique and efficient adaptations to their three dimensional aquatic environment

Insect Defenses David L. Evans, Justin O. Schmidt, 1990-07-19 This work takes a fresh modern approach to investigate and explain the predator and prey relationships of insects and spiders the major terrestrial fauna on earth Devoted to broad and in depth analysis of arthropod defenses against predators the book's approach is both experimentally and theoretically based with major emphasis on evolution predator strategies and tactics and prey defensive adaptations and behaviors The authors explain such topics as cryptic and aposematic coloration the conflict between sexual and survival needs web spider prey choice and evolution of prey counter defenses predator prey interactions and the origins of intelligence bird predatory tactics and caterpillar defense strategies Also examined is the use of timing for fitness and survival evolutionary gamesmanship in the predatory bat moth relationship colony defense by paper wasps startle as a defense by moths aggregation as a defense chemicals as defenses plant chemicals as defenses and venoms as defenses The authors illustrate each topic with numerous specific well documented examples presented in a clear readable style

Behaviour of Teleost Fishes T.J. Pitcher, 1992-12-31 This is the second edition of an extremely important and well received book The editor has brought together an international team of experts in the subject producing a book which contains vital information on major aspects of this important subject It should appear on the shelves of animal behaviourists fish biologists and fisheries scientists

Chemical Signals in Vertebrates 4 David Duvall, Dietland Müller-Schwarze, Robert M. Silverstein, 2012-12-06 This volume reviews recent developments in our understanding of chemical signaling in vertebrates After sections dealing with general principles and chemical aspects of vertebrate pheromones it follows a taxonomic approach progressing from fish to mammals The editors asked a diverse international group of leading investigators working on a wide array of vertebrate taxa and specific issues to consider their efforts from comparative evolutionary and ecological viewpoints The relative number of manuscripts in each part does not necessarily reflect current intensity of research since the editors invited speakers who together would provide a balanced and comprehensive overview while avoiding duplication Still the part on mammals is the longest Fourth in a series dating from 1977 this volume illuminates current trends and likely future developments in the field

of chemical signaling in vertebrates Going back even farther the first chapter a personal account of the past quarter century by Dr Mykytowycz recalls the most important milestones such as symposia or the founding of societies and journals He also credits those investigators who stand out by their seminal studies

Social Predation Guy Beauchamp, 2013-12-07 The classic literature on predation dealt almost exclusively with solitary predators and their prey Going back to Lotka Volterra and optimal foraging theory the theory about predation including predator prey population dynamics was developed for solitary species Various consequences of sociality for predators have been considered only recently Similarly while it was long recognized that prey species can benefit from living in groups research on the adaptive value of sociality for prey species mostly emerged in the 1970s The main theme of this book is the various ways that predators and prey may benefit from living in groups The first part focusses on predators and explores how group membership influences predation success rate from searching to subduing prey The second part focusses on how prey in groups can detect and escape predators The final section explores group size and composition and how individuals respond over evolutionary times to the challenges posed by chasing or being chased by animals in groups This book will help the reader understand current issues in social predation theory and provide a synthesis of the literature across a broad range of animal taxa Includes the whole taxonomical range rather than limiting it to a select few Features in depth analysis that allows a better understanding of many subtleties surrounding the issues related to social predation Presents both models and empirical results while covering the extensive predator and prey literature Contains extensive illustrations and separate boxes that cover more technical features i e to present models and review results

Cognitive Ecology Reuven Dukas, 1998-07-06 Cognitive Ecology lays the foundations for a field of study that integrates theory and data from evolutionary ecology and cognitive science to investigate how animal interactions with natural habitats shape cognitive systems and how constraints imposed on nervous systems limit or bias animal behavior Using critical literature reviews and theoretical models the contributors provide new insights and raise novel questions about the adaptive design of specific brain capacities and about optimal behavior subject to the computational capabilities of brains

Culture of Cold-Water Marine Fish Erlend Moksness, E. Kjørsvik, Y. Olsen, 2008-04-15 With the continuing decline of commercial stocks of wild caught fish the interest in the culture of cold water marine fish is rapidly growing with much ongoing research into the development of this area This important and timely book reviews the current and potential future situation concerning the major exploited marine fish species such as cod haddock hake wolf fish halibut turbot and sole The editors of Culture of Cold Water Marine Fish have drawn together and carefully edited chapters from a wide range of international scientists The contents list includes detailed reviews of abiotic factors microbial interactions prophylaxis and disease live food and first feeding technologies brood stock and egg production functional development weaning and nursery on growing to market size status and perspectives for the species covered stock enhancement and sea ranching and an analysis of the finances economics and markets for the fish species used in marine aquaculture Culture of

Cold Water Marine Fish is an essential purchase for personnel involved in marine aquaculture whether managing fish farms supplying equipment and feed to the industry or researching studying or teaching the subject Marine biologists fisheries scientists fish biologists ecologists and environmental scientists will all find much of use and interest in this timely book Libraries in all universities and research establishments where these subjects are studied and taught should have copies

Model Systems in Behavioral Ecology Lee Alan Dugatkin, 2019-12-31 A key way that behavioral ecologists develop general theories of animal behavior is by studying one species or a closely related group of species model systems over a long period This book brings together some of the field's most respected researchers to describe why they chose their systems how they integrate theoretical conceptual and empirical work lessons for the practice of the discipline and potential avenues of future research Their model systems encompass a wide range of animals and behavioral issues from dung flies to sticklebacks dolphins to African wild dogs from foraging to aggression territoriality to reproductive suppression *Model Systems in Behavioral Ecology* offers an unprecedented systems focus and revealing insights into the confluence of personal curiosity and scientific inquiry It will be an invaluable text for behavioral ecology courses and a helpful overview and a preview of coming developments for advanced researchers The twenty five chapters are divided into four sections insects and arachnids amphibians and reptiles birds and mammals In addition to the editor the contributors include Geoff A Parker Thomas D Seeley Naomi Pierce Kern Reeve Gerald S Wilkinson Bert H Ildobler and Flavio Roces George W Uetz Michael J Ryan and Gil Rosenthal Judy Stamps H Carl Gerhardt Barry Sinervo Robert Warner Manfred Milinski David F Westneat Alan C Kamil and Alan B Bond Paul Sherman Jerram L Brown Anders Pape Møller Marc Bekoff Richard C Connor Joan B Silk Christopher Boesch Scott Creel A H Harcourt and Tim Caro and M J Kelly

Living in Groups Jens Krause, Graeme D. Ruxton, 2002-10-17 Shoals swarms flocks herds group formation is a widespread phenomenon in animal populations It raises several interesting questions for behavioral ecologists Why do animals form and live in groups and what factors influence the ways in which they do this What are the costs and benefits to an animal of group living How are these influenced by ecological factors The authors familiarize the reader with cutting edge ideas on the ecology and evolution of group living animals and detail fascinating case studies demonstrating them in action

Ecology of Teleost Fishes Robert J. Wootton, 2012-12-06 Among the fishes a remarkably wide range of biological adaptations to diverse habitats has evolved As well as living in the conventional habitats of lakes ponds rivers rock pools and the open sea fish have solved the problems of life in deserts in the deep sea in the cold antarctic and in warm waters of high alkalinity or of low oxygen Along with these adaptations we find the most impressive specializations of morphology physiology and behaviour For example we can marvel at the high speed swimming of the marlins sailfish and warm blooded tunas air breathing in catfish and lungfish parental care in the mouth brooding cichlids and viviparity in many sharks and toothcarps Moreover fish are of considerable importance to the survival of the human species in the form of nutritious and delicious food of numerous kinds Rational

exploitation and management of our global stocks of fishes must rely upon a detailed and precise insight of their biology The Chapman and Hall Fish and Fisheries Series aims to present timely volumes reviewing important aspects of fish biology Most volumes will be of interest to research workers in biology zoology ecology and physiology but an additional aim is for the books to be accessible to a wide spectrum of non specialist readers ranging from undergraduates and postgraduates to those with an interest in industrial and commercial aspects of fish and fisheries **Journal of comparative ethology** ,1985

Geographic Variation in Behavior Susan A. Foster,John A. Endler,1999-03-04 Studies of animal behavior often assume that all members of a species exhibit the same behavior Geographic Variation in Behavior shows that on the contrary there is substantial variation within species across a wide range of taxa Including work from pioneers in the field this volume provides a balanced overview of research on behavioral characteristics that vary geographically The authors explore the mechanisms by which behavioral differences evolve and examine related methodological issues Taken together the work collected here demonstrates that genetically based geographic variation may be far more widespread than previously suspected The book also shows how variation in behavior can illuminate both behavioral evolution and general evolutionary patterns Unique among books on behavior in its emphasis on geographic variation this volume is a valuable new resource for students and researchers in animal behavior and evolutionary biology **American Aquarium Fishes** Robert Jay Goldstein,Rodney W. Harper,Richard Edwards,2000 Aquarium species native to America Aspects of Flocking Behavior and Predator Avoidance in Wintering Shorebirds Barbara Elaine Kus,1985 **Behavioural Ecology of Teleost Fishes** Jean-Guy J. Godin,1997 The differing behaviours of bony fishes are described in this guide to the most abundant vertebrate found on the planet Their behaviour and research done on it have encouraged the proposal to adopt new approaches and new directions in studying them **Grouping Patterns and Behavior of Ocean Surgeonfish (Acanthurus Bahianus) in Mixed-species Shoals** Amy Kristin Harth,1998
