Redesigning Human Systems:

Redesigning Human Systems Mumford, Enid, 2002-07-01 Organizational change is becoming increasingly complex challenging and difficult to handle as technology advances And there is a need to discuss how it can be both more effectively managed by large and small organizations while at the same time the strategies for changes are based on ethical notions of democracy and participation Redesigning Human Systems assists those interested in and responsible for the management of major change within organizations and provides the theories and values that should be adhered to in order to achieve that change successfully and effectively Redesigning Human Systems Enid Mumford, 2003-01-01 Assisting individuals interested in and responsible for the management of major change within organizations this book provides the theories and values that should be adhered to in order to achieve change successfully and effectively The complexities of the change process are explained and practical guidance for those trying to mold change so that it can offer a route to a better quality of life is provided This book also examines what has been called the sociotechnical philosophy of taking the needs of people into account when new work systems are being introduced *Designing Human Systems* Steve Hickey, Holly Matthies, Enid Mumford, 2006-06-03 Enid Mumford 1924 2006 was a pioneer in the sociotechnical design of computer systems Prof Mumford s work successfully investigated the introduction and implementation of computer systems by large corporations and governments Mumford s ETHICS approach to software development emphasizes user participation thus avoiding many of the problems of introducing new systems It takes a holistic view of organizations unifying both social and technological solutions This updated edition of Mumford s book *Designing Human Systems* describes how modern agile programming techniques complement the ETHICS method Together the two methods cover both user and developer issues This integrated approach offers an improved methodology for successful software development projects Critical Systems Thinking and the Management of Complexity Michael C. Jackson, 2019-04-08 From the winner of the INCOSE Pioneer Award 2022 The world has become increasingly networked and unpredictable Decision makers at all levels are required to manage the consequences of complexity every day They must deal with problems that arise unexpectedly generate uncertainty are characterised by interconnectivity and spread across traditional boundaries Simple solutions to complex problems are usually inadequate and risk exacerbating the original issues Leaders of international bodies such as the UN OECD UNESCO and WHO and of major business public sector charitable and professional organizations have all declared that systems thinking is an essential leadership skill for managing the complexity of the economic social and environmental issues that confront decision makers Systems thinking must be implemented more generally and on a wider scale to address these issues An evaluation of different systems methodologies suggests that they concentrate on different aspects of complexity To be in the best position to deal with complexity decision makers must understand the strengths and weaknesses of the various approaches and learn how to employ them in combination This is called critical systems thinking Making use of over 25 case

studies the book offers an account of the development of systems thinking and of major efforts to apply the approach in real world interventions Further it encourages the widespread use of critical systems practice as a means of ensuring responsible leadership in a complex world The INCOSE Pioneer Award is presented to someone who by their achievements in the engineering of systems has contributed uniquely to major products or outcomes enhancing society or meeting its needs The criteria may apply to a single outstanding outcome or a lifetime of significant achievements in effecting successful systems Comments on a previous version of the book Russ Ackoff the book is the best overview of the field I have seen JP van Gigh Jackson does a masterful job The book is lucid well written and eminently readable Professional Manager Journal of the Chartered Management Institute Provides an excellent guide and introduction to systems thinking for students of management

Conceptual Modelling in Information Systems Engineering John Krogstie, Andreas Lothe, Opdahl, Sjaak Brinkkemper, 2007-06-13. Conceptual modeling has always been one of the cornerstones for information systems engineering as it describes the general knowledge of the system in the so called conceptual schema. Krogstie, Opdahl and Brinkkemper compiled 20 contributions from renowned researchers covering all aspects of conceptual modeling on the occasion of Arne Sølvberg's 67th birthday. Many friends of this information systems modeling pioneer happily contributed their latest research results from fields like data modeling, goal oriented modeling, agent oriented modeling and process oriented modeling. Overall the contributions reflect the most important developments and application areas of conceptual modeling in recent years and they also pinpoint trends in conceptual modeling for the next decade. This wide selection corresponds to the broad spectrum of Arne's activities and long term responsibilities with the VLDB Endowment, IFIP and ERCIM. Arne was presented with this book at CAiSE 2007 when the event which he cofounded in 1989 returned to his hometown of Trondheim.

Automatic Tools for Designing Office Information Systems Barbara Pernici, Colette Rolland, 2012-12-06 The market for information technology products is rapidly changing from a manufacturer driven market where new products were determined by the evolution of technology to a user driven market where users buy only products corresponding exactly to their needs and where competition is very strong Confronted with this market

situation hardware and software producers are being obliged to adopt new strategies and to make a large number of products available on the market in response to a variety of different needs As a result of the multiplicity of choice available the design of an office system which corresponds precisely to user needs is becoming an increasingly complex task With exactly this in mind the Commission as early as 1985 invited submissions of projects aiming at the development of such adequate tools in its Call for Proposals for the ESPRIT Programme in order to assist companies in the design of their office systems This topic was recognised as being of strategic importance considering the low level of penetration of Information Technology in European enterprises compared to the United States and Japan Following this strategy the project TODOS was selected and launched This project has successfully developed tools and methods for the definition of the functional specification of the office system as well as the system architecture and user interface results which can be of great interest for the IT community at large
