Redox J. Schüring, H.D. Schulz, W.R. Fischer, J. Böttcher, W.H.M. Duijnisveld, 2013-04-17 Few processes are as important for environmental geochemistry as the interplay between the oxidation and reduction of dissolved and solid species The knowledge of the redox conditions is most important to predict the geochemical behaviour of a great number of components the mobilities of which are directly or indirectly controlled by redox processes The understanding of the chemical mechanisms responsible for the establishment of measurable potentials is the major key for the evaluation and sensitive interpretation of data This book is suitable for advanced undergraduates as well as for all scientists dealing with the measurement and interpretation of redox conditions in the natural environment **Advances in Agronomy**, 2007-05-09 Advances in Agronomy continues to be recognized as a leading reference and a first rate source for the latest research in agronomy As always the subjects covered are varied and exemplary of the myraid of subject matter dealt with by this long running serial Volume 94 contains six outstanding reviews and more than 20 color figures Maintains the highest impact factor among serial publications in Agriculture Presents timely reviews on important agronomy issues Enjoys a long standing reputation for excellence in the field Water and Nutrient Management in Natural and Constructed Wetlands Jan Vymazal, 2010-09-23 Natural and constructed wetlands play a very important role within the landscape and their ecological services are highly valuable Water management including flood water retention biomass production carbon sequestration wastewater treatment and as a biodiversity source are among the most important ecological services of wetlands In order to provide these services wetlands need to be properly evaluated protected and maintained This book provides results of the latest research in wetland science around the world Chapters deal with such topics as the use of constructed wetlands for treatment of various types of wastewater use of constructed wetlands in agroforestry wetland hydrology and evapotranspiration the effect of wetlands on landscape temperature and chemical properties of wetland soils
