SBIR at the Department of Defense National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program--Phase II, 2014-09-30 Created in 1982 through the Small Business Innovation Development Act the Small Business Innovation Research SBIR program remains the nation's single largest innovation program for small business The SBIR program offers competitive awards to support the development and commercialization of innovative technologies by small private sector businesses At the same time the program provides government agencies with technical and scientific solutions that address their different missions SBIR at the Department of Defense considers ways that the Department of Defense SBIR program could work better in addressing the congressional objectives for the SBIR program to stimulate technological innovation use small businesses to meet federal research and development R D needs foster and encourage the participation of socially and economically disadvantaged small businesses and increase the private sector commercialization of innovations derived from federal R D An earlier report An Assessment of the Small Business Innovation Research Program at the Department of Defense studied how

the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs This report builds on the previous one with a revised survey of SBIR companies SBIR at the Department of Defense revisits some case studies from the 2009 study and develops new ones and interviews agency managers and other stakeholders to provide a second snapshot of the program s progress toward achieving its legislative goals **Journal of reducing space mission cost [electronic journal].** ,1998 *Economic Principles Applied to Space Industry Decisions* Joel S. Greenberg,2003 *Controlling Cost Growth of NASA Earth and Space Science Missions* National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Cost Growth in NASA Earth and Space Science Missions,2010-10-21 Cost and schedule growth is a problem experienced by many types of projects in many fields of endeavor Based on prior studies of cost growth in NASA and Department of Defense projects this book identifies specific causes of cost growth associated with NASA Earth and space science missions and provides guidance on how NASA can overcome these specific problems The recommendations in this book focus on changes in NASA policies that would directly reduce or eliminate the cost growth of Earth and space science missions Large cost growth is a concern for Earth and space science missions and it can be a concern for other missions as well If the cost growth is large enough it can create liquidity problems for NASA s Science Mission Directorate that in turn cause cost profile changes and development delays that amplify the overall cost growth for other concurrent and or pending missions Addressing cost growth through the allocation of artificially high reserves is an inefficient use of resources because it unnecessarily diminishes the portfolio of planned flights The most efficient use of resources is to establish realistic budgets and reserves and effective management processes that maximize the likelihood that mission costs will not exceed reserves NASA is already taking action to reduce cost growth additional steps as recommended herein will help improve NASA s mission planning process and achieve the goal of ensuring frequent mission opportunities for NASA Earth and space science Proceedings of the 12th Reinventing Space Conference Scott Hatton,2016-12-25 The proceedings of the 2014 Reinventing Space conference present a number of questions in the context of a constantly innovating space industry from addressing the future of global cooperation investigating the impact of cuts in US government spending on the private space sector and probing the overall future of the commercial launch sector Space tourism and new technology promise the revival of interest in space development the Apollo Era was the first period of intense space activity and growth The need to create dramatically lower cost responsive and reliable launch systems and spacecraft has never been more vital Advances in technology are allowing smaller and cheaper satellites to be orbited from cubesats to nanosatellites to femtosatellites Thanks to more efficient new launch possibilities low cost access to space is becoming ever more achievable Commercial companies and countries are targeting the industry with new funding Organised by the British Interplanetary Society the presentations at this conference thoroughly address these challenges and opportunities *The Vice Chairman's Doctrine* Ian Domowitz,2022-03-28 There are books about product and

companies but no books about a company as a product The Vice Chair arrives from orbit around a corporation with a doctrine of leadership without authority for business warriors who reject control live in a world of influencers and aspire to become one Process and culture converge as competitive advantage by refashioning priorities for Industry 4.0 through unorthodox lenses in a no holds barred treatment of influence and leverage complete with coaching mantras and essential tales of leadership Competitive action is focused through design thinking and transformation within a social system A greater metamorphosis combines personal development with management of a company as though it were a product leading to culture branding and innovation in the form of actionable values *Orbital Mechanics* Tom Logsdon, 1997-10-24 A lively study of orbital mechanics by the writer responsible for the computer simulations and systems analysis for the Saturn V moon rocket Project Skylab and many others Provides thorough coverage of all background theories including unusual concepts and paradoxes that will enhance appreciation of this field Includes discussion of rocket propulsion and optimization of techniques for maximizing payload and minimizing fuel consumption plus complete coverage of the interaction of space vehicles and space bodies **Complex Systems Concurrent Engineering** Geilson Loureiro, Richard Curran, 2007-08-10 Concurrent engineering is well established as an approach to engineer product parts However the concept has much broader application Complex Systems Concurrent Engineering Collaboration Technology Innovation and Sustainability demonstrates how concurrent engineering can be used to benefit the development of complex systems to produce results that sustain balanced stakeholder satisfaction over time The collected papers cover all aspects of the sustainable and integrated development of complex systems such as airplanes satellites space vehicles automobiles and ships Complex Systems Concurrent Engineering Collaboration Technology Innovation and Sustainability focuses on five major areas Knowledge and collaboration engineering and management Systems engineering analysis modelling simulation and optimisation including value cost risk and schedule issues Product realisation processes methods technologies and techniques Business management and organisation issues product life cycle processes other than development and manufacturing and Information modelling technology and systems Conceptual Design and Flight Simulation of Space Stations Reinhold Bertrand, 1998 **Additive Manufacturing, Second Edition** Amit Bandyopadhyay, Susmita Bose, 2019-10-16 The field of additive manufacturing is growing dynamically as the interest is persisting from manufacturing sector including other sectors as well Conceptually additive manufacturing is a way to build parts without using any part specific tooling or dies from the computer aided design CAD file of the part Second edition of Additive Manufacturing highlights the latest advancements in the field taking an application oriented approach It includes new material on traditional polymer based rapid prototyping technologies additive manufacturing of metals and alloys including related design issues Each chapter comes with suggested reading questions for instructors and PowerPoint slides *Shaping Science* Janet Vertesi, 2020-11-06 A fascinating inside look at NASA missions that provides important insight on the organizational aspects of scientific collaboration American

Journal of Sociology In Shaping Science Janet Vertesi draws on a decade of immersive ethnography with NASA's robotic spacecraft teams to create a comparative account of two great space missions of the early 2000s. Although these missions featured robotic explorers on the frontiers of the solar system bravely investigating new worlds, their commands were issued from millions of miles away by a very human team. By examining the two teams' formal structures, decision-making techniques, and informal work practices in the day-to-day process of mission planning, Vertesi shows just how deeply entangled a team's local organizational context is with the knowledge they produce about other worlds. Using extensive embedded experiences on two NASA spacecraft teams, this is the first book to apply organizational studies of work to the laboratory environment in order to analyze the production of scientific knowledge itself. Engaging and deeply researched, *Shaping Science* demonstrates the significant influence that the social organization of a scientific team can have on the practices of that team and the results they yield. No matter how the lakes on Titan shimmer or what the mineralogy of a particular Martian rock turns out to be, it was the people behind the spacecraft keyboards and endless teleconferences that drove what these interplanetary robots discovered. I'm glad to have come to know them even better through this book. *Nature*. A fun, illuminating read. Scholars of science, technology, work, and organizations will find much to appreciate. *American Journal of Sociology*. Will be of great interest to all historians of science. *Technology and Culture*. Artificial Gravity Gilles Clément, Angeli Bukley, 2007-05-28

William H. Paloski, Ph.D., Human Adaptation and Countermeasures Office, NASA Johnson Space Center. Artificial gravity is an old concept having gotten its start in the late 19th century when Konstantin Tsiolkovsky, considered by many to be the father of the Russian space program, realized that the human body might not respond well to the free fall of orbital space flight. To solve this problem, he proposed that space stations be rotated to create centripetal accelerations that might provide inertial loading similar to terrestrial gravitational loading. Einstein later showed in his equivalence principle that acceleration is indeed indistinguishable from gravity. Subsequently, other individuals of note, including scientists like Werner von Braun as well as artists like Arthur C. Clarke and Stanley Kubrick, devised elaborate solutions for spinning vehicles to provide artificial gravity that would offset the untoward physiological consequences of spaceflight. By 1959, concerns about the then unknown human responses to spaceflight drove NASA to consider the necessity of incorporating artificial gravity in its earliest human space vehicles. Of course, owing in part to the relatively short durations of the planned missions, artificial gravity was not used in the early NASA programs. *Nanosatellites* Rogerio Atem de Carvalho, Jaime Estela, Martin Langer, 2020-06-02

Low Earth Orbit Satellite Design George Sebestyen, Steve Fujikawa, Nicholas Galassi, Alex Chuchra, 2018-02-06 In recent decades the number of satellites being built and launched into Earth's orbit has grown immensely alongside the field of space engineering itself This book offers an in depth guide to engineers and professionals seeking to understand the technologies behind Low Earth Orbit satellites With access to special spreadsheets that provide the key equations and relationships needed for mastering spacecraft design this book gives the growing crop of space engineers and professionals the tools and resources they need to prepare their own LEO satellite designs which is especially useful for designers of small satellites such as those launched by universities Each chapter breaks down the various mathematics and principles underlying current spacecraft software and hardware designs

Fundamentals of Astrodynamics and Applications D.A. Vallado, 2001-06-30 Fundamentals of Astrodynamics and Applications is rapidly becoming the standard astrodynamics reference for those involved in the business of spaceflight What sets this book apart is that nearly all of the theoretical mathematics is followed by discussions of practical applications implemented in tested software routines For example the book includes a compendium of algorithms that allow students and professionals to determine orbits with high precision using a PC Without a doubt when an astrodynamics problem arises in the future it will become standard practice for engineers to keep this volume close at hand and look it up in Vallado While the first edition was an exceptionally useful and popular book throughout the community there are a number of reasons why the second edition will be even more so There are many reworked examples and derivations Newly introduced topics include ground illumination calculations Moon rise and set and a listing of relevant Internet sites There is an improved and expanded discussion of coordinate systems orbit determination and differential correction Perhaps most important is that all of the software routines described in the book are now available for free in FORTRAN PASCAL and C This makes the second edition an even more valuable text and superb reference
