to grow and develop both in the UK and internationally Literature and research in the field tend to document this growth while this book takes a novel approach to the Forest school conversation taking a critical look at the various tensions and difficulties that surround Forest School practice The editors together with chapter authors drawn from the fields of academia and practice form an experienced voice encouraging the reader to reflect upon question and explore complex areas of Forest School practice **The Forest Landscape Restoration Handbook** Stewart Maginnis,Jennifer

Rietbergen-McCracken,Alastair Sarre,2012-05-04 Forest loss and degradation have caused a decline in the quality of ecosystem services around the world But fixing the problem takes more than just planting trees practitioners increasingly realize that a landscape approach is essential This handbook authored and edited by international authorities in the field of forestry is the first practical guide to using forest landscape restoration FLR to repair the damage done to forest lands by poor land management practice Using research backed by respected institutions such as ITTO and the World Conservation Union IUCN it explains how to increase the resilience of landscapes and the communities they support through FLR The main aim of FLR is not to re establish pristine forest even if this were possible rather the objective is to make landscapes more resilient and thereby keep future management options open It also aims to support communities as they strive to increase and sustain the benefits they derive from land management This book explains the concept of FLR and guides the reader through the steps that must be taken to put it into practice It is an indispensable aid for practitioners in all aspects of forestry and natural resource management **Adaptive Collaborative Management in Forest Landscapes** Carol J.

Pierce Colfer,Ravi Prabhu,Anne M. Larson,2021-12-12 This book examines the value of Adaptive Collaborative Management for facilitating learning and collaboration with local communities and beyond utilising detailed studies of forest landscapes and communities Many forest management proposals are based on top down strategies such as the Million Tree Initiatives Forest Landscape Restoration FLR and REDD often neglecting local communities In the context of the climate crisis it is

imperative that local peoples and communities are an integral part of all decisions relating to resource management Rather than being seen as beneficiaries or people to be safeguarded they should be seen as full partners and Adaptive Collaborative Management is an approach which priorities the rights and roles of communities alongside the need to address the environmental crisis The volume presents detailed case studies and real life examples from across the globe promoting and prioritizing the voices of women and scholars and practitioners from the Global South who are often under represented Providing concrete examples of ways that a bottom up approach can function to enhance development sustainably via its practitioners and far beyond the locale in which they initially worked this volume demonstrates the lasting utility of approaches like Adaptive Collaborative Management that emphasize local control inclusiveness and local creativity in management This book will be of great interest to students scholars and practitioners working in the fields of conservation forest management community development and natural resource management and development studies more broadly The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Shimoda, 2012-12-06 Forests comprise the greatest storage of carbon on land provide fuel for millions are the habitat for most terrestrial biodiversity and are critical to the economies of many countries Yet changes in the extent and dynamics of forests are inherently difficult to detect and quantify Remote sensing technologies may facilitate the measurement of some key forest properties which when combined with other information contained in various computer models may allow for the quantification of critical forest functions This book explores how remote sensing and computer modeling can be combined to estimate changes in the carbon storage or productivity of forests from the level of the leaf to the level of the globe Land managers researchers policy makers and students will all find stimulating discussions among an international set of experts at the cutting edge of the interface between science technology and management Sampling Methods, Remote Sensing and GIS Multiresource Forest Inventory Michael Köhl, Steen S.
