The Future of Education and Labor Gerald Bast,Elias G. Carayannis,David F. J. Campbell,2019-12-10 This book explores the ways in which education impacts labor markets Specifically the contributions in this book indicate that the future of labor is creative socially aware and inter disciplinary while identifying the changes and innovations needed in our educational systems to meet this demand Due to an increasing automatization robotic manufacturing the character of labor and work in general will change dramatically in the near future This will be the case not only in the western countries but also in the larger emerging economies in Asia for example China and India While societal environments economy and the character of labor are increasingly in a process of dramatic changes the educational systems and the leading principles of research about labor and employment are not changing adequately Cross disciplinary inter disciplinary and trans disciplinary thinking and learning is not the main focus of our educational systems Consequently the systems of academic research follow and apply disciplinary or even sub disciplinary strategies avoiding cross disciplinary research approaches and not supporting inter disciplinary academic career models This book introduces such strategic models to better prepare the next generation of workers for the new knowledge economy and the future of democratic societies
